2013-14 Academic Calendar

Refer to the schedules that are distributed each semester for calendar changes.

Fall 2013 Semester

June 18 - June 19	First-Year Orientation Class of 2017
June 24 - June 25	First-Year Orientation Class of 2017
July 1	Deadline for selected students on financial aid to submit verification documents to the Office of Financial Aid
July 8	Registration begins for all Continuing Studies (non matriculated students) for Fall 2013 Applications for Degree are due for August graduation
Aug. 1	Last day for part-time undergraduate students to sign up for Fall 2013 monthly payment plan
Aug. 5	Last day - part-time undergraduate students for online registration for Fall 2013
Aug. 23	Deadline for undergraduate readmission application for Fall 2013
Aug. 29	International Students move in from 8 a.m. to 8 p.m.
Aug. 30 - Sept. 2	Orientation for International Students
Sept. 1	Orientation and Fall Welcome - Class of 2017 First-year move in 7:30 a.m. to 1 p.m. by floors All Transfer students move in from 8 a.m. to 12 p.m. BCC Dining Hall will open at 4 p.m.
Sept. 2	Fall Welcome continues Labor Day - University holiday Class of 2016: Sophomores move in 8 a.m. to 1 p.m. Classes of 2015 and 2014: junior and senior students will move in from 2 to 8 p.m. Transfer orientation for new undergraduate students
Sept. 3	Classes begin for all undergraduate programs
Sept. 3 - Sept. 9	Drop/Add for undergraduate students
Sept. 30	Deadline for selected students on financial aid to submit Sibling Enrollment forms(s) for current academic year
Oct. 11	Deadline for freshman and Division I athlete deficiencies Deadline for Summer 2013 and Spring 2013 makeup of Incompletes
Oct. 14	Columbus Day - University holiday
Oct. 18	Last day for course withdrawal - Undergraduate (Except ASAP II Courses)
Oct. 23	Deadline for major and minor changes for undergraduate for Spring 2014 registration
Nov. 4 - Nov. 22	Undergraduate advising and registration for Spring 2014
Nov. 27 - Dec. 1	Thanksgiving Recess - all schools BCC Dining Hall closes at 2 p.m. on 11/26 BCC Dining Hall reopens at 4 p.m. on 12/1 Residence Halls close at 6 p.m. on 11/26 (Undergraduate students with evening classes on 11/26 are permitted to remain until 10 p.m.) Residence Halls re-open at noon on 12/1

Dec. 2	Classes resume for all schools Applications for Degree are due for January 30th graduation - all schools Registration begins for Continuing Studies (non-matriculated students) for Spring 2014
Dec. 11	Last day of classes for undergraduate students
Dec. 12, 15, 18	Reading Days - undergraduate students
Dec. 13 - Dec. 20	Final Examinations for undergraduate students (except for reading days)
Dec. 20	Residence Halls close at 6 p.m. BCC Dining Hall closes at 2 p.m. Undergraduate students with a 3 p.m. final are permitted to remain until 8 p.m. Last day for part-time undergraduate students to sign up for Spring 2014 monthly payment plan

Winter 2014 Intersession

Jan. 2 - Jan. 8	Undergraduate Classes
------------------------	-----------------------

Spring 2014

Jan. 2	Last day - part-time undergraduate students for online registration for Spring 2014
Jan. 8	Deadline for undergraduate day readmission for Spring 2014
Jan. 15	Residence Halls open at 10 a.m. New Undergraduate Student Orientation and Orientation for International Students BCC Dining Hall opens at 4 p.m.
Jan. 16	Classes begin for all schools
Jan. 16 - Jan. 22	Drop/add period for undergraduate students
Jan. 20	Martin Luther King, Jr. Day - University holiday
Feb. 3	Deadline for Study Abroad applications for Fall 2014 and Spring 2015
Feb. 12	Deadline for Fall 2013 make up of "Incompletes"
Feb. 17	President's Day - University holiday
Feb. 18	Monday classes meet for Undergraduate day classes (To make up for Monday holidays)
Feb. 28	Deadline for freshman deficiencies and Division I athlete deficiencies
Mar. 7	Last day for course withdrawal-Undergraduate (except ASAP II courses)
Mar. 19	Deadline for major and minor changes for undergraduates for Fall 2014 registration
Mar. 21	Residence Halls close for Spring Recess at 6 p.m. BCC Dining Hall closes at 2 p.m.
Mar. 24 - Mar. 28	Spring Recess - All schools Spring Intersession - Undergraduate

Mar. 30	Residence Halls reopen 12 noon BCC Dining Hall opens 4 p.m.
Mar. 31	Classes resume - all schools
Mar. 31 - Apr. 16	Undergraduate advising and registration for Fall 2014
Apr. 1	Registration begins for Continuing Studies (non-matriculated students) for Summer 2014 Applications for Degree are due for May graduation - all schools
Apr. 15	Deadline for full-time undergraduate upper-class students to submit FAFSA and CSS PROFILE
Apr. 18-Apr. 21	Easter Recess for undergraduates
Apr. 22	Classes begin for undergraduate programs
Apr. 8 - Apr. 26	Undergraduate advising and registration for Fall 2014
Apr. 30	Last day of classes for undergraduates
May 1, 4, 7	Reading Days - Undergraduate day students
May 2 - May 9	Final Examinations for undergraduate day students (except for reading days) and final exams/last day undergraduate evening classes BCC Dining Hall closes at 2 p.m. Residence Halls, Townhouses and Apartment Complex close at 6 p.m. Undergraduate students with a 3 p.m. final are permitted to remain until 8 p.m.
May 17	Baccalaureate Mass
May 18	64th Commencement, Undergraduate Ceremony - 9:30 a.m.
May 19	Residence Halls, Townhouses and Apartment Complex close at 12 noon for Seniors

Summer 2014

May 19 - Aug. 1	Engineering Summer Session
May 21 - May 28	Undergraduate One Week - Pre-Session (Memorial Day Holiday, May 26)
June 2 - July 3	Undergraduate Session I
June 18 - June 19	First-Year Students Orientation Class of 2018
June 23 - June 24	First-Year Students Orientation Class of 2018
July 1	Deadline for selected students on financial aid to submit verification documents to the Office of Financial Aid
July 7	Registration begins for Continuing Studies Programs for Fall 2014 Degree applications due for August 30th graduation (All schools)
July 7 - Aug. 4	Undergraduate July Session II
Aug. 6 - Aug. 12	Undergraduate - One Week Post Session

A Message from the President

Dear Student,

Welcome to Fairfield University, and thank you for interest in becoming a member of our community.

As a Jesuit institution, Fairfield is the inheritor of an almost 500-year-old tradition that believes the purpose of an education is to develop our students as "whole persons" - in mind, body, and in spirit.

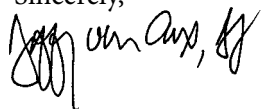

It is our mission to pursue excellence in education in the fullest sense, by forming young men and women to be global citizens, confident in their capacities, trained to succeed in any circumstance, and inspired to put their gifts at work in the world. As a student at Fairfield, you will learn from our first-class faculty who are leaders in their field, who share with our students a passion for learning.

During your years at Fairfield, you will discover what it means to be a member of a community that shares your interests. Our faculty and mentors will accompany you along a pathway of vocational self-exploration. You will engage in the greater community - as a student leader, through study abroad experiences, and hands-on learning opportunities and you will develop an area of unique study that will help you discern the right path for the future.

Our proximity to New York City means that our students have an exciting range of internship possibilities, as well as exposure to the most current developments in their areas of intellectual pursuit. Fairfield graduates go on to fulfilling careers, as global leaders in business, education, medicine, law, the arts, and countless other professions where they are sought after for their intellectual acumen and strength of character.

A Fairfield education will form you in this manner, preparing you to meet future challenges. We invite you to browse through this catalog of courses and take the first step towards your Fairfield education.

Sincerely,

Jeffrey P. von Arx, S.J.
President

Fairfield University Mission

Fairfield University, founded by the Society of Jesus, is a coeducational institution of higher learning whose primary objectives are to develop the creative intellectual potential of its students and to foster in them ethical and religious values, and a sense of social responsibility. Jesuit education, which began in 1547, is committed today to the service of faith, of which the promotion of justice is an absolute requirement.

Fairfield is Catholic in both tradition and spirit. It celebrates the God-given dignity of every human person. As a Catholic university, it welcomes those of all beliefs and traditions who share its concerns for scholarship, justice, truth, and freedom, and it values the diversity that their membership brings to the University community.

Fairfield educates its students through a variety of scholarly and professional disciplines. All of its schools share a liberal and humanistic perspective, and a commitment to excellence. Fairfield encourages a respect for all the disciplines - their similarities, their differences, and their interrelationships. In particular, in its undergraduate schools, it provides all students with a broadly based general education curriculum with a special emphasis on the traditional humanities as a complement to the more specialized preparation in disciplines and professions provided by the major programs. Fairfield is also committed to the needs of society for liberally educated professionals. It meets the needs of its students to assume positions in this society through its undergraduate and graduate professional schools and programs.

A Fairfield education is a liberal education, characterized by its breadth and depth. It offers opportunities for individual and common reflection, and it provides training in such essential human skills as analysis, synthesis, and communication. The liberally educated person is able to assimilate and organize facts, to evaluate knowledge, to identify issues, to use appropriate methods of reasoning, and to convey conclusions persuasively in written and spoken word. Equally essential to liberal education is the development of the aesthetic dimension of human nature, the power to imagine, to intuit, to create, and to appreciate. In its fullest sense, liberal education initiates students at a mature level into their culture, its past, its present, and its future.

Fairfield recognizes that learning is a lifelong process and sees the education that it provides as a foundation upon which its students may continue to build within their chosen areas of scholarly study or professional development. It also seeks to foster in its students a continuing intellectual curiosity and a desire for self-education that will extend to the broad range of areas to which they have been introduced in their studies.

As a community of scholars, Fairfield gladly joins in the broader task of expanding human knowledge and deepening human understanding, and to this end it encourages and supports the scholarly research and artistic production of its faculty and students.

Fairfield has a further obligation to the wider community of which it is a part, to share with its neighbors its resources and its special expertise for the betterment of the community as a whole. Faculty and students are encouraged to participate in the larger community through service and academic activities. But most of all, Fairfield serves the wider community by educating its students to be socially aware and morally responsible people.

Fairfield University values each of its students as an individual with unique abilities and potentials, and it respects the personal and academic freedom of its members. At the same time, it seeks to develop a greater sense of community within itself, a sense that all of its members belong to and are involved in the University, sharing common goals and a common commitment to truth and justice, and manifesting in their lives the common concern for others which is the obligation of all educated, mature human beings.

Fairfield University Overview

Fairfield University offers education for an inspired life, preparing students for leadership and service through broad intellectual inquiry, the pursuit of social justice, and cultivation of the whole person: body, mind, and spirit.

A comprehensive university built upon the nearly 500-year-old Jesuit traditions of scholarship and service, Fairfield University is distinguished by a rigorous curriculum, close interaction among faculty and students, and a beautiful, 200-acre campus with views of Long Island Sound.

Since its founding in 1942 by the Society of Jesus (the Jesuits), the University has grown from an all-male school serving 300 to a competitively ranked coeducational institution serving approximately 3,400 undergraduate students, 1,200 graduate students, and more than 400 students enrolled for degree completion programs, as well as personal and professional enrichment courses and certificates.

- Fairfield offers over 40 undergraduate majors, 17 interdisciplinary minors, and 41 graduate programs. The University is comprised of five schools: the College of Arts and Sciences, the Charles F. Dolan School of Business, and the schools of Engineering, Nursing, and Graduate School of Education and Allied Professions. Students benefit from small class sizes, an outstanding faculty, a rich array of study abroad, internship, research, and service opportunities, and the resources and reputation of a school consistently ranked among the top regional universities in the north by the *U.S. News & World Report*.

Since 1993, 63 Fairfield students have been named Fulbright scholars, and the University is among the 12 percent of four-year colleges and universities with membership in Phi Beta Kappa, the nation's oldest and most prestigious academic honor society.

Fairfield is located one hour north of New York City at the center of a dynamic corridor of educational, cultural and recreational resources, as well as leading corporate employers.

Diversity Vision Statement

As a Jesuit and Catholic institution, Fairfield University's commitment to the God-given dignity of the human person requires that we create an environment that promotes justice and fosters a deep understanding of human and cultural diversity. Fairfield is committed to encouraging dialogue among those with differing points of view in order to realize an integral understanding of what it means to be human. The University recognizes that transcending the nation's political and social divisions is a matter of valuing diversity and learning respect for individuals, in their similarities and their differences. Fairfield will continue to integrate diversity in all facets of University life – academic, administrative, social, and spiritual – as together, the community seeks to realize a vision of common good that is rooted in genuine human solidarity.

Fairfield University defines diversity in the broadest sense, reflecting its commitment to creating a more inclusive community that is reflective of the richly diverse global community of which we are part. Diversity encompasses not only racial, ethnic, and religious diversity, but also diversity of socioeconomic contexts, cultural perspectives, national origins, sexual orientation, gender identity, age, physical ability, and educational backgrounds.

Overview - Resources & Services

Academic Resources

Faculty Advising. All members of the faculty share personally and actively in the responsibility for providing students with educational, career, and personal guidance. One of the hallmarks of a Jesuit education is the personal interest each professor takes in students; the professor tries to know each student's strengths and weaknesses. This tradition is basic to Fairfield. Classes are not large, and there are ample opportunities for close student-teacher relationships. Members of the faculty make themselves available for informal discussions, advice, and encouragement well beyond their published office hours.

Academic Advisor

Students who have a declared major are assigned a faculty advisor in that academic discipline. Undeclared students are also assigned a faculty advisor. However, when these students declare a major, they will be reassigned to an advisor in the academic discipline chosen. Advisors are available to meet regularly with students, monitor progress, advise students at registration time, and discuss courses and programs of study, co-curricular involvement, and high-impact learning opportunities such as study abroad, capstones, and internships. Fairfield's faculty advisors, along with professional advising staff and peer mentors, promote a holistic approach to academic advising that encourages students to be actively engaged and to make thoughtful choices regarding their current and future plans.

Office of Exploratory Academic Advising

The office of Exploratory Academic Advising is available to all students exploring choice of major and minor, including those considering a change of major. Services are provided to students regardless of class year. The Office of Exploratory Academic Advising coordinates group based peer tutoring and also works with faculty advisors and academic dean's offices to ensure the academic progress of all first-year students and NCAA student athletes through a comprehensive academic Alert system - Early Alerts, Midterm Estimates, and Final Alerts.

Academic Support Programs

- **Tutoring.** The Office of Exploratory Academic Advising, located in the Kelley Center, recruits students who are proficient in their major concentration and/or other subjects and trains them to serve as peer tutors. Peer tutoring is group based, free of charge, and open to all students. Additional tutoring services are available through the University's individual schools in select subject areas. For more information visit: www.fairfield.edu/tutoring
- **The Office of Disability Support Services.** For more information about Disability Support Services, please visit fairfield.edu/student/adss_about.html.
- **The Writing Center.** The Writing Center, located on the lower level of the DiMenna-Nyselius Library, offers writing assistance and resources to all students. Tutors work with students on any writing project and at any stage of the project's development. For more information or to schedule an appointment, please visit www.fairfield.edu/writingcenter.
- **Academic Skills Development.** Administered by the Office of Disability Support Services, students in this program meet with the Director to discuss academic enhancement skills. The office is located at the Kelley Center.
- **The Charles E. Culpeper Language Resource Center.** The Culpeper Language Resource Center, located in Canisius Hall 207, is designed to support and promote the study and instruction of foreign languages and their cultures. Students work interactively with computer and web-based materials. This allows them to take ownership of their learning experience and become lifelong learners. We provide one-on-one assistance in finding materials, and in accessing the online components of languages courses.

Aloysius P. Kelley, S.J. Center

Located on Loyola Drive, the Kelley Center houses the offices of Undergraduate and Graduate Admission, the Registrar, Financial Aid, Dean of Student Development, New Student Programs, Office of Exploratory Academic Advising, Academic & Disability Support Services, and the Career Planning Center.

DiMenna-Nyselius Library

The Library is the intellectual heart of Fairfield's campus and its signature academic building, combining the best of the traditional academic library with the latest access to print and electronic resources. Carrels, leisure seating, and research tables provide study space for up to 900 individual students, while groups meet in team rooms, study areas, or convene for conversation in the 24-hour cafe. Other resources include a 24-hour, open-access computer lab with Macintosh and Windows-based computers; a second computer lab featuring Windows-based computers only; two dozen multimedia workstations; an electronic classroom; a 90-seat multimedia auditorium; photocopiers, scanners, microform readers and printers; and audiovisual hardware and software. Workstations for the physically disabled are available throughout the library.

The library's collection includes more than 365,000 bound volumes, 376,000 e-books, 515 print journal and newspaper subscriptions, electronic access to 60,000 full-text journal and newspaper titles, and 15,000 audiovisual items. To borrow library materials, students must present a StagCard at the Circulation Desk. Students can search for materials using the research portal, Summon Discovery system. Library resources are accessible from any desktop on or off campus at <http://www.fairfield.edu/library/>. From this site, students use their NetID and password to access their accounts, read full-text journal articles from more than 170 databases, submit interlibrary loan forms electronically, or contact a reference librarian around the clock via IM, e-mail, Skype or "live" chat.

The library has an Information Technology Center consisting of a 30-seat, state-of-the-art training room, a 12-seat conference/group study room with projection capability, and 10 collaborative work areas. Also, the Center for Academic Excellence and the Writing Center are both housed on the lower level. The IT Help Desk is on the main level.

During the academic year, the library is open Monday through Thursday, 7:45 a.m. to midnight; Friday, 7:45 a.m. to 10:30 p.m.; Saturday, 9 a.m. to 9 p.m.; and Sunday, 10:30 a.m. to midnight with an extended schedule of 24/7 during exam periods.

International Students

International students are served through the Office of Student Support Services, located in the Kelley Center. This department sponsors a specialized orientation program for international students and provides assistance with legal forms and other documentation.

Early Learning Center

The Center provides an early care and education program based on accepted and researched theories of child development; individualized programs designed to meet the needs of each child; a curriculum that is child-oriented and emergent by the children; and teaching staff who have specialized educational training in child development and developmentally appropriate practice with young children, including health, safety, and nutritional guidelines.

The Center is open all year from 7:30 a.m.-5:30 p.m. for children aged 6 weeks to 5 years. Children may be enrolled on a full- or part-time basis depending upon space availability. Registration takes place every March. For tuition details, registration requirements, or other information, call the Center at (203) 254-4028 or visit www.fairfield.edu/gseap/elc.

Arts and Minds Programs

Fairfield University serves as an important hub for students and visitors from the region seeking entertaining and inspiring cultural events and activities. The **Regina A. Quick Center for the Arts** houses the Aloysius P. Kelley, S.J. Theatre, the Lawrence A. Wien Experimental Theatre, and the Thomas J. Walsh Art Gallery. Various departments also host exhibitions, lectures and performance programs throughout the academic year, including the popular lecture series **Open Visions Forum**. The new **Bellarmino Museum of Art** is located in Bellarmine Hall and displays a rich and varied collection of paintings, sculpture and decorative arts objects. Not only is the Museum a showcase for significant art objects, but it serves as a learning laboratory for students and members of the regional community. All Fairfield students receive free or discounted tickets for arts events. For a cultural calendar visit www.fairfield.edu/arts. The **PepsiCo Theatre** is home base for Theatre Fairfield, the University's performing arts club, and provides another venue for theatre and dance in an intimate setting. In addition, various departments schedule exhibitions, lectures, and dramatic programs throughout the academic year. These events are open to all members of the University community and many are free.

Student Handbook

For information about Compliance Statements and Notifications, Student Resources, Policies and Procedures, Student Conduct Code, Residential Guidelines, and Clubs and Organizations, please see the Student Handbook at www.fairfield.edu/studenthandbook.

Computing Services

Fairfield University offers high-speed fiber-optic cable connectivity, with transmission speeds of up to 1 gigabit-per-second. This technology connects our classrooms, residence halls, and offices, providing fast and reliable access to the online library catalogue, email, various databases, and other electronic resources.

Students, staff, and faculty have access to 12 computer labs located throughout campus. These labs are supported by knowledgeable lab assistants, and are open 14 hours a day for both walk-in and classroom use. Each computer lab offers hardware and software for Windows and Macintosh environments. Every dormitory room has access to wired/wireless internet and cable television. Students are issued individual NetID accounts, and are given access to our secure portal My.fairfield. Here, students are able to check their e-mail, grades, register for courses, review their academic and financial records, and access campus-wide announcements.

Information Technology Services (ITS)

Located within the DiMenna-Nyselius Library, the ITS Help Desk is open Monday through Friday from 8:30 a.m. to 7:00 p.m. and can be reached by phone at (203) 254-4069 or by email at its@fairfield.edu. The ITS offices are located on the first and second floors of Dolan Commons. The ITS team manages all technology services on campus including academic computing, administrative computing, network services, project management, training, and support services.

Accreditations

Fairfield University is fully accredited by the New England Association of Schools and Colleges, which accredits schools and colleges in the six New England states. Accreditation by one of the six regional accrediting associations in the United States indicates that the school or college has been carefully evaluated and found to meet standards agreed upon by qualified educators.

Additional accreditations include:

AACSB International - The Association to Advance Collegiate Schools of Business (Charles F. Dolan School of Business)

Accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>

- B.S. Computer Engineering Program
- B.S. Electrical Engineering program
- B.S. Mechanical Engineering program
- B.S. Software Engineering Program

American Chemical Society

- (College of Arts and Sciences)
- B.S. in Chemistry

Commission on Accreditation of Marriage and Family Therapy Education

- (Graduate School of Education and Allied Professions, GSEAP)
- Marriage and Family Therapy program

Connecticut State Department of Higher Education

- (GSEAP)

Council for Accreditation of Counseling and Related Educational Programs

- (GSEAP)
- Counselor Education programs

Commission on Collegiate Nursing Education

- (School of Nursing)
- Undergraduate Nursing programs
- Masters Nursing programs
- Doctoral programs

National Council for the Accreditation of Teacher Educators (NCATE)

- Elementary Education
- Secondary Education
- School Counseling
- School Library Media Specialist
- School Psychology
- Special Education
- TESOL/Bilingual Education programs

National Association of School Psychologists (NASP)

- (GSEAP)
- School Psychology

Program approvals include:

Connecticut State Office of Financial and Academic Affairs for Higher Education

- Elementary and Secondary Teacher certification programs
- Graduate programs leading to certification in specialized areas of education
- School of Nursing programs

Connecticut State Department of Education and National Council for the Accreditation of Teacher Educators (NCATE)

- Elementary and Secondary Education
- Special Education
- TESOL/Bilingual Education
- School Counseling
- School Library Media
- School Psychology

Connecticut State Board of Examiners for Nursing

- Undergraduate Nursing programs

Council on Accreditation of Nurse Anesthesia Educational Programs

The University holds memberships in:

- AACSB International - The Association to Advance Collegiate Schools of Business
- American Association of Colleges for Teacher Education
- American Association of Colleges of Nursing
- American Council for Higher Education
- American Council on Education
- ASEE - American Society for Engineering Education
- Association of Catholic Colleges and Universities
- Association of Jesuit Colleges and Universities
- Connecticut Association of Colleges and Universities for Teacher Education
- Connecticut Conference of Independent Colleges
- Connecticut Council for Higher Education
- National Action Council for Minorities in Engineering
- National Association of Independent Colleges and Universities
- National Catholic Educational Association
- New England Business and Economic Association

Catalog

The provisions of this catalog are not to be regarded as an irrevocable contract between Fairfield University and the students. The University reserves the right to change any provision or any requirement at any time.

FERPA Information

For information about student rights under the Family Education Rights and Privacy Act (FERPA), the Non-Discrimination Statement, and the Jeanne Clery Disclosure of Campus Security Policy and Campus Crime Statistics Act, please see the Student Handbook at www.fairfield.edu/studenthandbook.

Admission Policies And Procedures

Fairfield University admits without discrimination students of any sex, race, color, marital status, sexual orientation, gender identity, religion, national or ethnic origin, or handicap to all the rights, privileges, programs, and activities generally accorded or made available to students of the University.

Freshman Admission

Successful candidates for admission should have received a high school diploma from a recognized high school or preparatory school and should have acquired no less than 15 units in college-preparatory studies. The unit is commonly understood as a measure of credit assigned for the successful completion of a high school course that meets four or five times each week throughout the year; college-preparatory units are those usually found in the high school curriculum that explicitly prepare students for college. No vocational, commercial, or industrial units are considered to be preparatory to the work of the liberal arts college. Candidates for admission must take units chosen from the areas listed below. Typically, freshman students are admitted in September only.

BASIC REQUIREMENTS

English 4

Mathematics 3 to 4 (may include)

- Algebra 1
- Algebra 2
- Geometry
- Pre-calculus
- Calculus

Foreign Language 2 to 4

Laboratory Science 3 to 4 (may include)

- Earth Science
- Biology
- Chemistry
- Physics

History/Social Science 3 to 4

Candidates interested in mathematics, engineering, business, and the sciences are urged to pursue a fourth unit of lab science and mathematics, preferably pre-calculus or calculus. Candidates for nursing must have one laboratory course in chemistry.

In addition to the basic requirements, applicants must present evidence to indicate interest in and competence for college studies. To that end they must submit a complete record of high school studies, together with other supporting materials as described in the admission application form.

The admission process at Fairfield University is Test Optional. Students may choose whether or not to submit the results of the SAT or ACT. Students should indicate on the Common Application whether or not it is their intention to have their scores considered in the admission process. Students who choose not to submit their test scores are strongly encouraged to schedule a personal interview.

The deadline for regular decision applicants to have all application materials (application, high school transcript, and guidance counselor recommendation) postmarked is Jan. 15. The University also strongly recommends a campus visit including a tour, information session, and/or an optional personal interview.

Students who speak English as a second language should take the Test of English as a Foreign Language (TOEFL) if they have resided in the United States for fewer than five years. The University may, at its discretion, admit students who do not meet the regular published entrance requirements.

Early Action/Early Decision Admission

Students who consider Fairfield University to be among their top choices for their undergraduate education and who would like to have their application reviewed early may submit it under our **Early Action Program**. Applicants for Early Action must submit all application materials, including the Common Application, high school transcript, and guidance counselor recommendation by Nov. 1. Students may choose whether to submit the results of their ACT or SAT exams. Early Action candidates who are interested in arranging a campus interview should make that request

before the Nov. 1 deadline. Early Action candidates will be notified of their admission decision before Jan. 1. Early Action admission is non-binding, and students have until May 1 to make their college selection. Fairfield University also offers an **Early Decision Admission Program**. Early Decision is a BINDING agreement. If a student is admitted under the Early Decision guidelines, he/she must agree to withdraw any pending college applications and confirm enrollment at Fairfield. The deadline for Early Decision admission is Jan. 1, and students will receive notification of the decision by Feb. 1. Superior students who have completed a four-year high school program at the end of three years may apply for admission to the University.

Academic Scholarships

A number of academic scholarships are available to outstanding students. The Magis Scholarship is a \$22,000 annual award, renewable for four years providing a student maintains a 3.0 grade point average. Additional merit scholarships ranging from \$5,000 to \$22,000 are available. All students who apply for admission are automatically considered for a merit scholarship. Successful candidates will be students with outstanding academic records, as well as strong records of achievement and engagement outside of the classroom.

Wait List

Freshman applicants to Fairfield will receive one of three decision letters: admit, deny, or a wait list offer. Wait list students who are serious in their intent to remain on the wait list are asked to return a card indicating their interest.

Alumni Relatives

One of the strongest endorsements an educational institution can receive is to have alumni send their children to their alma mater. At Fairfield we believe that such candidates can contribute significantly to enhancing the tradition and the spirit that are an important part of a Fairfield education. In light of this, it is our practice to consider a student's legacy connections to Fairfield when reviewing a candidate's application for admission.

Deferred Admission

Occasionally, a student who has been admitted to the University will seek to defer his/her admission for a variety of reasons. Students may defer for one semester, or up to two years. In order to defer, students must pay the confirmation deposit to hold his/her place in the class, and make the request to defer admission in writing. In order to defer admission, a student must agree to not take more than 11 college credits during the deferral period. Any merit scholarship that a student was awarded will be honored when the student enrolls. However, a student who defers will be required to re-apply for need-based financial assistance.

Transfer Admission

The University welcomes qualified students who wish to transfer to Fairfield from other accredited colleges. Students interested in transferring normally have accumulated at least 15 credits and have maintained at least a 2.5 grade point average (the Charles F. Dolan School of Business requires at least a 2.8 GPA). Transfers are not accepted into the full-time School of Nursing undergraduate program. Please note that the GPA is simply a guideline, and not a guarantee of admission. To apply, students must submit, in addition to the required application forms, a high school transcript, college records, a recommendation form, and a personal statement explaining current academic and/or work activities and reasons for transferring. Students must also submit a statement from the Dean of Students Office at the college from which they are transferring indicating they are in good standing at their current institution and eligible to return. Students may choose whether or not to send the results of their SAT or ACT exams. Every effort is made to accept transfer credit as a program rather than totaling single course credits so students may be admitted to a specific year at Fairfield, e.g., accepted as a second semester sophomore or first semester junior. The core courses of Fairfield's program should be met, but appropriate adjustments will be made in individual cases. Every transfer student is required to complete at least two years of full-time undergraduate study in order to receive a Fairfield University bachelor's degree. Applications should be directed to the Office of Admission. The application deadline for September admission is May 1; the application deadline for January admission is Nov. 15.

International Students

Matriculating international students must attend Fairfield University on a full-time basis (minimum of 12 credits per semester). Degree-seeking (freshman or transfer) students should contact the Office of Admission for further information. To be eligible to attend Fairfield the student must:

- Provide a complete and certified listing of all academic institutions attended, including dates of entry, grades, termination, and title of the certificate or diploma received. Include rank in class if available. These documents should be prepared in English or with an official English translation.
- Demonstrate proficiency in the English language. A minimum score of 550 (paper-based), 213 (computer-based), or 80 (Internet-based) on the Test of English as a Foreign Language is the preferred documentation. Results from the SAT exam may also be submitted.
- Prove sufficient financial support for the period of the student's stay at Fairfield, including tuition, room and board, and transportation.
- Obtain an F-1 student visa (required for entry into the United States for the purpose of studying full-time at Fairfield) after receiving an I-20/DS-2019 from the University. The visa is issued by the U.S. Embassy or Consulate in one's own country.

Non-matriculated international students may attend Fairfield University for a semester or academic year. All students must be enrolled on a full-time basis (minimum of 12 credits per semester). Such students are accepted into the academic programs at Fairfield and are treated as regular members of the student body. They are usually full-fee-paying students. Visiting international students should contact the Office of International Student Services, (203) 254-4000, ext. 2445.

Part Time Degree Seeking Students

Fairfield University welcomes part time students in the College of Arts and Sciences, the Charles F. Dolan School of Business, the School of Nursing and the School of Engineering. Classes in a variety of formats offer part time students the opportunity to earn a bachelor's degree in many of the departments in each of the four schools. Faculty advisors and assistant and associate deans in each of the schools are available to help guide part time students through the admission process and the selection of courses and programs. Whether you are looking to enhance your career options or to expand your intellectual horizons, the fulfillment of your educational goals is within your reach at Fairfield University. Descriptions of the degree programs available for part time students are listed in the section for each school. Admission as a part time degree seeking student is on a rolling basis through the office of Undergraduate Admission. Degree-seeking applicants for part time studies must meet the same criteria as applicants for full-time study. In evaluating the applications of part time students, Undergraduate Admission will consider the full breadth of what each student could bring to Fairfield beyond a traditional review of transcripts. The customized online application for part time degree seeking students will be accessible through the Admission page of the University web site.

Personal and Professional Enrichment

In addition Fairfield University offers a number of programs and educational opportunities for lifelong learners who are not degree seeking but wish to take courses on a part time basis. Non degree seeking lifelong learners interested in educational enrichment or certificate programs may apply online through a dedicated landing page on the University website. This page will include listings of credit and non-credit continuing studies opportunities and programs.

Articulation Agreements

School of Engineering

(for the completion of the bachelor of science degree in engineering)

Gateway Community College
Housatonic Community College
Manchester Community College
Norwalk Community College
Three Rivers Community College
SUNY Westchester Community College

School of Nursing

The Connecticut State Articulation Agreement

Fairfield University is in compliance with the Connecticut Articulation Model for Nurse Educational Mobility. This model provides standardized mobility for all nurses who have graduated from a diploma or associate degree nursing program. A minimum of thirty nursing credits from the associate or diploma program will be awarded when the student is able to demonstrate required competency by successfully completing NS 250 Professional Nursing.

Partnership Agreements with the Connecticut College Nursing Program

Capital Community College
Gateway Community College
Naugatuck Valley Community College
Three Rivers Community College

Partnership Agreement with Bridgeport Hospital School of Nursing

College of Arts & Sciences

Housatonic Community College
Norwalk Community College

Charles F. Dolan School of Business

(accepts only Liberal Arts credits)

Housatonic Community College
Norwalk Community College

Tuition, Fees And Financial Aid

Application Fee \$60

(This fee is not refundable)

Tuition & Fees

Full-Time Undergraduates

Tuition (12 to 18 credits per semester)	\$42,320 per year
General Fee	\$600 per year

Tuition payable on or before August 1 for fall semester and January 1 for spring semester. An acceptance deposit (non-refundable and credited toward the fall semester's tuition) of \$200 is paid on acceptance of the notice of admission.

Part-Time Undergraduates

Summer Term & Intersession Terms	\$725 per credit
Tuition (less than 12 credits) (Fall & Spring)	\$725 per credit
Tuition (twelve credits or more) (Fall & Spring)	\$21,160 per semester
Tuition (Full-Time Undergraduates going Part-Time)	\$1,410 per credit
Bachelor of Professional Studies	\$725 per credit
Registration Fee	\$30 per semester
Matriculation Fee	\$60

Nursing (Adult & Second Degree)

Adult Nursing, RN-BSN	\$675 per credit
Nursing BS - Second Degree Program	\$725 per credit
Registration Fee	\$30 per semester
Matriculation Fee	\$60

Resident Student Fees

Residence Halls and Meals	\$12,930
Townhouse (Room Only)	\$10,510
Apartment Complex (Room Only)	\$10,845

Payable on or before August 1 for fall semester and January 1 for spring semester.

Room Deposit	\$400
--------------	-------

Not refundable if reservation is voluntarily canceled.

Credited when graduating or leaving the school or University housing.

Special Fees

Orientation Fee (Freshmen only)	\$230
Orientation Fee (Transfers only)	\$50
Science Laboratory Fee (per course)	\$50
Language Resource Fee (per course)	\$50
Studio Arts Materials Fee (per course)	\$45
SA133 and SA134 each carry an additional fee of \$50 for a total fee of	\$95 per course
Computer Science and Information Systems courses (per credit)	\$15
Practice Teaching	\$20
Extra course (per credit hour)	\$1,410
Continuous Registration for Educational Leave (per semester)	\$500
Automobile Registration Fee	\$120
Returned Check Fee	\$30
Commencement	\$150
Academic Transcript	\$4

Nursing student costs:

Two uniforms and equipment (estimated)	\$150
Student malpractice insurance	\$20
ATI Testing Fee (per semester)	\$110
Nursing pin (estimated)	\$100
Material Fee NS 270 and NS 307	\$200 (\$100 per course)
Background Check Fee	\$45
Immunization Tracker Fee	\$30

Transportation to clinical experiences and parking fees are the responsibility of the student.

The Trustees of the University reserve the right to change tuition rates and to make additional charges whenever they believe it to be necessary. All checks are to be made payable to Fairfield University. The University reserves the right to make a finance charge computed by a periodic rate of 1 percent per month which is an annual rate of 12 percent on amounts past due 30 days or more and to add all costs of collection, including a reasonable sum for attorney's fees, or charge a one-time \$50 late fee per semester.

International students who are admitted must make known to the University the source of their financial support for their college education. They will be expected to make a deposit before a certificate of eligibility (I-20) is issued.

The University makes available a monthly payment plan as well as federal, state, and private loan programs. Brochures on the payment plan and the loan programs are available to all students. Please contact the Office of the Bursar for additional information.

No degree will be conferred and no transcripts will be issued until all financial obligations to the University have been met.

Refund Policy

Refunds, as the result of official withdrawal through the University Registrar's Office, will be made according to the following schedule. General and special fees are not refundable.

Official Withdrawal Date	Refund % of Charge
First week	90 percent
Second week	80 percent
Third week	60 percent
Fourth week	40 percent
Fifth week	20 percent
Sixth week	0 percent

Refunds take two to three weeks to process.

Financial Aid**Financial Aid Policy**

Fairfield University administers a comprehensive financial aid program offering assistance on the basis of need and merit, with funds derived from University, state and federal government, and private student aid programs. Need-based funds are distributed following a thorough analysis of a family's ability to pay for educational expenses. The amount of need-based assistance provided to a student will vary from year to year depending on the student's need and the availability of funds. Merit-based awards are made to academically talented students as entering first-year students and are generally renewed for their remaining three years of enrollment. Assistance funded by the University is credited toward tuition unless otherwise indicated. Renewal of any type of assistance is contingent on the recipient making satisfactory academic progress and on filing the Free Application for Federal Student Aid (FAFSA) and CSS Profile applications on time every year.

Students who demonstrate need will receive a financial aid package that may consist of grants, scholarships, student employment, and student loans. Although the University invests a significant amount of its own resources in its student aid programs, funds are limited; it is usually not possible to meet a student's full need. In those instances where a family needs additional resources, the University will recommend a payment plan and loan options. Financial aid awards are usually made to prospective first-year students during March, assuming the appropriate applications have been filed on time. Returning students who apply for financial aid will receive their award notifications in mid-May via their my.Fairfield.edu student e-mail account. Financial Aid administrators are available throughout the year to answer questions and to provide assistance. The Office of Financial Aid is located at the Kelley Center, and may be reached by phone at (203) 254-4125 or by e-mail at finaid@fairfield.edu.

Application Procedures

To apply for financial aid, all undergraduate students must complete the Free Application for Federal Student Aid (FAFSA) and the CSS Profile Form on an annual basis; forms must be submitted to the respective processing centers by University deadlines. Prospective first-year students are required to complete the FAFSA and CSS Profile by Feb. 15; early action and early decision candidates must complete the CSS Profile by January 1 and the FAFSA by February 15. Returning students must apply by April 15 and transfer students must apply by May 1.

Students may file the FAFSA online at www.fafsa.gov and may file the CSS Profile at www.collegeboard.org. Fairfield's FAFSA code is 001385 and the CSS Profile code is 3390. By accepting any financial aid, you obligate yourself to verify the application information if selected for verification by either the federal processing center or the Office of Financial Aid. Financial aid awards are estimated until the Office of Financial Aid confirms eligibility. If a student is selected for the verification process, the Office of Financial Aid will provide notification of the required documentation in order to complete the file review and confirm aid eligibility. Documentation required for verification is due no later than August 1, 2013. Financial aid awards may change based on verification results. Failure to comply with verification requirements in a timely manner will result in cancellation of need-based aid.

Renewal of Financial Aid Awards

Need-based awards of University grants and scholarships will be renewed provided that the recipient reapplies for aid by University deadlines, continues to demonstrate sufficient need and maintains satisfactory academic progress standards. Need-based awards may be adjusted depending on changes in a student's need. Renewal of state and federal award funds will depend on a student's continued eligibility and on the availability of funds. Merit-based awards will be renewed at the same amount received as in the first year as long as the required minimum grade point average is earned for renewal.

Standards for Satisfactory Academic Progress

For students to be eligible for federal, state or university need-based financial aid, they must be in good academic standing and must make Satisfactory Academic Progress (SAP) toward a degree. SAP is measured at the end of each academic year and is based on both pace of enrollment and academic performance at the time of measurement. Pace is determined by the total number of credit hours completed as a proportion of those attempted. Incomplete grades, repeated courses and course withdrawals that occur after the drop/add period are counted in the credit hours attempted. If the student has transfer credits, the credit hours are counted in both the credit hours completed and attempted.

Academic performance is measured by GPA including grades earned only in Fairfield University courses. In order to make SAP, students advancing from the first year to the sophomore year are expected to have a weighted cumulative GPA of 1.80 or better. At the end of the sophomore year, students are expected to have a weighted cumulative GPA of 1.90 or better. At the end of junior year, students should have an weighted cumulative GPA of 2.0 or better. For the purposes of both pace and academic performance, summer courses will be included as the trailing term of the academic year.

Pace of enrollment is measured by the percentage of attempted credit hours that are completed. Students must complete at least 67% of the credit hours attempted in a year in order to receive financial aid in the following year. Overall, students are eligible for university-based aid for up to eight semesters of enrollment; students may receive federal financial aid up to 150% (typically 6 years) of the normal time to degree completion. Repeated courses will be counted as part of the attempted and completed courses, and part of the 150% of normal time to completion.

Students who lose eligibility for financial aid as a result of failure to make satisfactory academic progress may appeal to be placed on financial aid probation. This appeal must include the reasons for the lack of progress and the student's anticipated steps for improvement. In order to consider the appeal, the student will need to submit an approved academic plan that will lead to achievement of SAP standards. If during the probation period the student has not successfully achieved satisfactory academic progress, the student may appeal with a modified academic plan. Probation may last for up to one academic year, unless there are extraordinary circumstances. While on probation, a student's progress will be monitored at the end of each semester.

Notification

The Office of Financial Aid will notify all students who fail to maintain satisfactory academic progress. Students will be notified of their SAP status by mail.

Reinstatement of Financial Aid

To have financial aid eligibility reinstated, a student may make up the credit hour and/or grade point index deficiencies in a subsequent term without receipt of financial aid for that term. University aid is only offered (if the student maintains eligibility) for eight semesters.

Appeal Process

A student who believes his/her failure to meet SAP standards was due to extenuating circumstances beyond his/her control may appeal in writing to the Appeals Committee. Some examples of extenuating circumstances are:

- A student's serious illness or accident
- Death or serious illness in the student's immediate family
- Cancellation/discontinuance of a class by the University
- Other unforeseeable circumstances beyond the control of the student that caused the student to fall below the satisfactory progress standards

Students should submit the SAP Appeal Form, including a personal letter, explaining the reason for the request and reason for their current academic status. In addition, an approved Academic Plan must be completed by the student and by an administrator from the appropriate Dean's Office.

The Academic Plan can be obtained in the Dean's Office of any school, or printed online. The appeal form, personal letter, Academic Plan, and any other supporting documentation (if desired), must be submitted to the student's financial aid counselor in the Office of Financial Aid.

If an appeal for one semester of probationary financial aid is approved, a student's progress will be monitored at the end of each semester. If after the financial aid probation period the student has not successfully achieved the required minimum GPA for reinstatement of the full financial aid award, the student may submit an appeal letter to request an extended probationary period of financial aid. Financial aid probation may last for up to one year, unless there are extraordinary circumstances.

Appeals must be submitted to the Office of Financial Aid by July 1, or by other stated deadlines as provided by the Office of Financial Aid. If reinstatement of aid is sought for summer sessions, the appeal must be submitted prior to the first day of classes for that term. It is the responsibility of the student to initiate an appeal before a specified SAP Appeal deadline.

Estimate of Expenses

The student cost of attendance used in determining financial aid eligibility includes direct charges from the University as well as other expenses incurred by a student during the course of the academic year. The cost of attendance for a full time resident student, for the 2013-14 academic year, is as follows:

Tuition and Fees	\$42,320
General fee	\$600
Room and Board Allowance	\$12,930
Books and Supplies	\$1,150
Personal Expenses	\$930
Transportation	\$800
Total Residential Budget	\$58,730

Academic Withdrawal

Those who are asked to withdraw from the University for academic failure will lose entitlement to financial aid. Students who are later readmitted to the University may appeal for reinstatement of some financial aid, but aid is not automatically reinstated.

Merit Scholarship

All merit scholarships awarded by Fairfield University are renewable for up to eight semesters of study provided the recipient earns the required minimum GPA for renewal. The GPA renewal requirement, which varies by level of award, is included in the initial award letter provided at the time of the student's admission to Fairfield and is measured at the end of each academic year.

Students who lose eligibility for merit scholarship as a result of failure to meet the minimum GPA requirement may appeal to be placed on merit scholarship probation. Students must submit the SAP Appeal Form, including a personal letter, explaining the reason for the request and reason for their current academic status. The appeal form, personal letter, and any other supporting documentation (if desired), must be submitted to the student's financial aid counselor in the Office of Financial Aid.

If an appeal for one semester of probationary merit scholarship is approved, a student's progress will be monitored at the end of each semester. If after the merit scholarship probation period the student has not successfully achieved the required minimum GPA for reinstatement of the full merit scholarship, the student may submit an appeal letter to request an extended probationary period of merit scholarship. Merit scholarship probation may last for up to one year, unless there are extraordinary circumstances.

Appeals must be submitted to the Office of Financial Aid by July 1, or by other stated deadlines as provided by the Office of Financial Aid. If reinstatement of aid is sought for summer sessions, the appeal must be submitted prior to the first day of classes for that term. It is the responsibility of the student to initiate an appeal before a specified SAP Appeal deadline.

Fairfield University Grant

In addition to scholarships, a number of need-based grants are awarded by the University. Amount and availability of each grant is dependent upon the current status of revenues from which they are drawn. Demonstrated financial need, as well as academic performance and potential, are the criteria used in determining the awards. Fairfield University provided \$49 million of its own resources in 2012-13 for financial aid. Most scholarships and grants-in-aid are packaged with other types of federal or state aid.

Federal Grants

Federal Pell Grant

A federal entitlement program that provides grants of up to \$5,6450 to eligible students in the 2013-14 academic year who are pursuing their first baccalaureate degree.

Federal Supplemental Educational Opportunity Grant

Grants from federal funds are made available to students who demonstrate exceptional financial need. Funding for the program is very limited. Priority is given to Federal Pell Grant recipients.

State Scholarships and Grants

All financial aid applicants should research the opportunities that exist in their home state for direct scholarships or grants. Students should contact their state board or commission for higher education or consult their high school guidance counselor for information.

Loans

Federal Perkins Loan

A campus-based federal loan program for students with exceptional need. Recipients are selected by the University. No payments of principal or interest are required until after the borrower completes his or her education, at which time repayment at 5 percent interest is assessed. Repayment may extend up to 10 years, depending on the amount borrowed. Funding for the program is very limited and is usually reserved for first-year students.

Federal Nursing Loan

A campus-based federal loan program for nursing majors with need. Recipients are selected by the University. No payments of principal or interest are required until after the borrower changes majors or completes his or her nursing degree, at which time repayment at 5 percent interest is assessed. Repayment may extend up to 10 years, depending on the amount borrowed. Funding for the program is very limited.

Direct Stafford Loan Program

Federal Direct Stafford Loans may be obtained from www.studentloans.gov. Up to \$5,500 per academic year for freshmen (max \$3,500 subsidized), \$6,500 per academic year for sophomore-level students (max \$4,500 subsidized), or \$7,500 per academic year for junior- and senior-level students (max \$5,500 subsidized) may be borrowed. Repayment begins six months after a student ceases to enroll on at least a half-time basis. Students must file a FAFSA before a Direct Stafford Loan can be processed. The FAFSA will determine if the student is eligible for a subsidized loan (government pays interest while student is enrolled) or unsubsidized loan (student pays or allows interest to accrue while enrolled full-time). There is a 1.051 percent loan fee paid by borrowers of the Stafford loan. The interest rate for 2012-2013 was 3.4 percent.

Direct PLUS Loan Program

This is a loan program for parents of dependent undergraduate students. A parent may borrow up to the cost of education minus any financial aid received during any one academic year. Students must file a FAFSA for parents to be eligible to borrow a PLUS loan. Parents and students must meet general eligibility requirement and parents must pass a credit check to be eligible to borrow a PLUS loan. Repayment begins 60 days after disbursement of the loan at a fixed interest rate of 7.9%. There is a 4.204 percent loan fee paid by borrowers of the PLUS loan. To learn more and apply online, visit: www.studentloans.gov.

Alternative Loans

It is recommended that students borrow the maximum in Direct Stafford Loans before considering an alternative student loan. Direct Stafford loans tend to be less expensive with fixed interest rates and provide various options for repayment. The Office of Financial Aid will certify any alternative loan at the request of any borrower, provided they are approved; however, it is the responsibility of the borrower to determine which alternative loan best fits their borrowing needs.

Alternative student loans are available to assist students cover any financial gap that may exist between their educational costs (cost of attendance = COA) and the amount of financial aid they are receiving. There are many types of alternative student loans, each are calculated with different interest rates and repayment terms, which vary, depending on the borrower and co-borrower's credit-worthiness. Fairfield University does not have a preferred lender list for alternative loans. Additional information may be found at www.fairfield.edu/loans. Students and families should research what alternative loan suits their borrowing needs. Most, if not all, undergraduate students usually require a credit-worthy co-borrower in order to obtain the best interest rate(s) and benefits. If you need assistance with any loans, please contact the Office of Financial Aid at: finaid@fairfield.edu or call (203) 254-4125.

Tuition Pay Payment Plan

The University offers the Tuition Pay Payment Plan, an interest-free, 10-month plan for payment of educational expenses. Please contact the Office of the Bursar for further information.

Veterans

Veterans may apply educational benefits to degree studies pursued at Fairfield University. Veterans should consult with the Office of Financial Aid regarding the process and eligibility for possible matching funds through Fairfield's Veterans Pride Program. Information about the program, including free tuition for some veterans, is available at www.fairfield.edu/veterans. The University Registrar's office will complete and submit the required certification form for all VA benefits.

Campus Employment

Federal Work-Study Program

Federal Work Study (FWS) may be awarded to students demonstrating financial need as part of their financial aid award. On or off campus work is available. Whenever possible, students may be able to secure employment that relates to their field of study. For more information regarding this program, please go to www.fairfield.edu/fws.

University Employment

Students who are not eligible for participation in the Federal Work-Study Program, but who desire extra spending money, may obtain employment in the cafeteria, the bookstore, and several other campus locations.

Consumer Information

Fairfield now offers a Net Price Calculator, a new resource to help students and their families estimate the merit-based and need-based aid for which you may be eligible at Fairfield University. For access to the calculator and more information, please go to http://www.fairfield.edu/admission/uga_netpricecalc.html.

Scholarships

Through the generosity of individuals, corporations, and foundations, a number of scholarships have been made available to students at the University. These gifts continue the rich tradition of philanthropy that characterizes American life, and it is through the donors' generosity that Fairfield is able to offer these scholarships. The University is pleased to be a beneficiary of that tradition and commitment. Students applying for financial aid are considered automatically for the named scholarships listed here, which are administered by the Office of Financial Aid in accordance with the wishes of the donors.

Michael R. Andrews '89 Memorial Scholarship:

A scholarship established by several former teammates and classmates of Mike Andrews with the intention of providing financial aid to a student with demonstrated need. Mike's passion and spirit will live on through those who receive this scholarship.

Alumni Association Scholarship:

A need-based scholarship with a preference for the son or daughter of an alumnus/alumna of Fairfield University.

Alumni Multicultural Scholarship:

A fund established with the proceeds from the annual Alumni Association Awards Dinner to help meet financial needs of minority students.

Margaret M. Atwell Scholarship:

A scholarship established through the generosity of Bill and Peggy Atwell P'08, this fund gives preference to a female student enrolled in the Charles F. Dolan School of Business who has demonstrated financial need.

Beiersdorf Nursing Scholarship:

An endowed scholarship established in 1986 by Beiersdorf Inc. of Wilton, Conn., the fund assists chemistry majors and offers an internship opportunity.

Bouchard Family Scholarship:

Awarded to students with financial need with a preference for students majoring in communication or any major within the Dolan School of Business.

Carl and Dorothy Bennett Scholarship:

A fund established by Mr. and Mrs. Carl Bennett to provide annual scholarships for Fairfield University students on a financial need basis.

Joseph F. '72 and Gail T. Berardino Scholarship:

Established in 2001 by alumnus and University Trustee Joseph F. Berardino, this need-based scholarship assists students in the Charles F. Dolan School of Business.

Barbara M. Berchem Memorial Scholarship:

An endowed award established in 1988 by University Trustee Robert M. Berchem '62, to honor the memory of his mother. This scholarship has a preference for a student from Milford, Conn.

David and Eunice Bigelow Scholarship:

To be used toward financial aid for undergraduate students who have demonstrated financial need. Preference is that it is granted to a student who is matriculated in the School of Business, is community-minded, and possesses an entrepreneurial spirit.

James W. and Jean L. Birkenstock Scholarship:

This scholarship has been made possible through the estate of James W. Birkenstock, former University trustee. Preference will be given to students who demonstrate financial need.

John and Jane Bohnsack Scholarship:

A scholarship fund established in 1985, to be awarded on the basis of financial need and divided equally between a nursing student and a business student.

Salvatore F. Bongiorno Scholarship:

Established in 1993 in memory of a long time University faculty member and former chair of the Biology Department, this scholarship assists minority biology majors in their junior or senior years who plan further studies and careers in the life sciences.

Mr. and Mrs. Charles A. Bott Scholarship:

Established by Mrs. Charles A. Bott and the late Mr. Bott of Huntingdon Valley, Pa., the fund provides assistance to students with financial need.

John V. Brennan Scholarships:

A gift from John V. Brennan, former president of U.S. Underwriters Inc., and parent of Paul F. Brennan '89, provides scholarships to assist minority students with financial need.

The Richard J. Brennen, III Endowed Scholarship:

Established by Mr. and Mrs. Richard J. Brennen, Jr. P'06 in honor of their son. The scholarship supports students with demonstrated financial need.

Marina Holder Brewster Memorial Scholarship Fund:

Established by Dr. and Mrs. John P. Sachs to provide financial assistance with a preference for nursing students.

Ned John Briggs '69 Memorial Scholarship:

Established in 1989 by the estate of his mother, Kathryn V. Briggs, this endowed scholarship perpetuates the memory of Ned John Briggs, who attended Fairfield in 1965 and 1966. It is awarded on the basis of academic potential and financial need.

Gladys Brooks Foundation Asian Studies Endowed Scholarship:

The Gladys Brooks Foundation Scholarship in Asian Studies, a one-year award, recognizes a student who has excelled academically in this program.

Gladys Brooks Foundation Scholarship:

Created in 1986 to enhance Fairfield's ability to attract students of the highest quality. Recipients will be asked to assume a "moral obligation" to support the University after graduation by voluntary service and/or contributions. Criteria for scholarship recipients include secondary school class rank, scholastic aptitude test scores, extracurricular activities, and leadership potential.

Professor Frank F. Bukvic Scholarship:

Established in 1997, the scholarship honors the memory of Dr. Bukvic who taught German and German literature in the University's Modern Languages Department for 35 years. Preference is given to a student with a major or minor in modern languages.

Sophie Burger and Pauline Hagen Scholarship:

An endowed scholarship made possible by the generosity of Carl E. Hagen '65 through the Chipman Union Foundation to provide financial aid assistance with a preference for students in the Charles F. Dolan School of Business.

The Burger King Scholarship:

An endowed scholarship established by The Burger King Corp. to provide financial assistance with a preference for minority students.

Rev. Vincent Burns, S.J. Scholarship:

A scholarship established by the Kara Foundation in honor of Fr. Burns. Preference is given to students with a minor in religious studies or ethics.

Anna Cain Scholarship:

A fund to support students who demonstrate financial need and strong academic qualifications. Established in 1978, the scholarship is a bequest of the late Anna Cain, an area educator who took many advanced courses at Fairfield.

Louis Calder Foundation Scholarship:

The Louis Calder Foundation Scholarship was established in 1988. The Foundation's initial award was designed as a challenge grant that ultimately encourage various other donors to create scholarships in support of students with residency in one of New York's five boroughs. Additionally, these young people must demonstrate academic promise and have significant financial need.

Margaret and Marjorie Campbell Scholarship:

A scholarship established to provide financial assistance with a preference for a student whose life has been affected by alcohol or drugs.

Jonathan Neff Cappello '00 Scholarship:

This scholarship, in memory of Jonathan Cappello who died in the World Trade Center tragedy on Sept. 11, 2001, was established by his family and friends. Preference is given to graduates of Garden City High School in New York who have demonstrated need.

Donna Rosanne Carpenter-Sederquest Memorial Scholarship:

A need-based scholarship established by family members and friends in memory of Donna Carpenter-Sederquest, who attended Fairfield University. Preference is given to communication and English majors in the top 10 percent of their high school classes and who are graduates of Fairfield Warde High School, Fairfield Ludlowe High School, or reside in Fairfield County. The scholarship is dedicated to the perpetuation of the academic, professional, and personal excellence Donna so well embodied.

E. Gerald Corrigan Endowed Scholarship:

This fund, established by E. Gerald Corrigan '63, a former member of the Fairfield University Board of Trustees, provides assistance with a preference for first generation, minority, or foreign students in good academic standing.

David and Lori Cowen Scholarship:

An endowed fund established by Mr. and Mrs. David Cowen to provide annual scholarships for Fairfield University students on the basis of financial need.

Arsene Croteau Family Scholarship:

Provides financial assistance with a preference for a student majoring in French. The late Professor Croteau was a long-time member of the Department of Modern Languages and Literatures.

William Cummings and Brothers Scholarship:

A scholarship fund established by Mary C. Cummings in January 1968. Preference is given to entering freshmen from the town of Fairfield.

James and Denise Daly Nursing Scholarship:

An endowed fund, created in 1991 by Mr. and Mrs. James J. Daly, to provide financial aid with a preference for nursing students.

Dennis and Marsha Dammerman Scholarship:

An endowed fund created by Dennis and Marsha Dammerman to provide multicultural scholarships.

George E. Diffley Scholarship:

Established in 2006 by Fairfield University, this need-based endowment honors the former vice president for advancement, who retired in 2006 after 31 years of service to the University.

David J. Dolan Memorial Scholarship:

An endowed scholarship established by Mr. and Mrs. Charles F. Dolan, honoring the memories of Mr. Dolan's father and brother. Income will provide financial aid assistance to Fairfield University students.

Rao Dukkipati Scholarship:

An endowed scholarship established in the memory of Dr. Rao V. Dukkipati, a long-time faculty member in the School of Engineering. Provides financial aid to engineering students with demonstrated need.

E&F Construction Company Scholarship:

A scholarship funded by the E&F Construction Company to assist students attending Fairfield University.

Rev. Anthony J. Eiardi, S.J., Scholarship:

A fund created in 1986 by the estate of Dominic R. Eiardi, who left the bequest in honor of his brother, Fr. Eiardi, a retired member of the Fairfield University mathematics department faculty. The fund will provide scholarship opportunities for deserving undergraduate students.

Fairfield County ISA Endowed Scholarship:

Established by the Fairfield County Instrument Society of America, this scholarship gives preference to engineering students from Fairfield County who have a G.P.A. of 3.0 or greater.

Fairfield Jesuit Community Scholarship:

An endowed fund established in 1983 by the Fairfield Jesuit Community to provide annual scholarships to Fairfield students on the basis of financial need.

Helen T. Farrell Scholarship:

A fund created in 1983 from the estate of Helen T. Farrell, who was a Westport, Conn., resident, to provide financial aid to undergraduate students.

Christiane Felsmann Memorial Scholarship:

An endowed scholarship, established by Maja Dubois, to provide an annual scholarship for a student with demonstrated financial need.

Mae B. Feracane Scholarship:

Established through a bequest from Mae Feracane, who was a secretary in the Psychology Department, to help needy and deserving students.

Michael and Claudine Gibbons Ferrante Scholarship:

An endowed scholarship established by these two alumni from the class of 1990 to assist students with demonstrated financial need.

Daniel R. Finn, Jr. '66 Scholarship:

Established in 1988 by Daniel R. Finn, Jr., member of the Class of 1966 and former University trustee, this need-based scholarship provides financial assistance with a preference for AHANA students.

Professor Thomas J. Fitzpatrick, Sr. Minority Accounting Scholarship:

A fund established by former professor of accounting Thomas J. Fitzpatrick, Sr. to provide financial assistance with a preference for a minority student majoring in accounting in the Charles F. Dolan School of Business.

Fiume Accounting Scholarship:

Established by Orest Fiume '64, this endowed scholarship gives preference to accounting students who have a G.P.A. of 3.0 or greater.

Helene Fuld Health Trust Scholarship for Baccalaureate Nursing:

An endowed scholarship that gives preference to baccalaureate students in Fairfield's nursing program who have a G.P.A. of 3.0 or greater.

F.U.S.A. Scholarship:

An endowed scholarship established by the Fairfield University Student Association in 1985. Income will provide financial aid assistance to Fairfield University students.

Nelson Fusari Memorial Scholarship:

Established by Mr. and Mrs. Albert Fusari in 1981 in memory of their son Nelson, a member of the class of '83, for the benefit of handicapped students.

John P. Gahan, Jr. Memorial Scholarship:

A fund donated by friends of the father of John P. Gahan, Jr. (Class of '61). John was killed after completing one year of school. Preference is given to graduates of St. Mary's High School in Manhasset, N.Y.

Dr. Edward E. Garcia '57 Scholarship:

Established by Mr. Ronald F. Borelli '62, this need-based scholarship honors the memory of Mr. Borelli's late brother-in-law. Preference is given to students studying in the natural sciences.

Bernard A. Gilhuly Jr. '52 Scholarship:

An endowed scholarship established by this alumnus and former trustee, to be awarded to students with demonstrated need.

Gill Family Scholarship:

A scholarship to be awarded to any undergraduate student with demonstrated need.

Gladys Brooks Foundation Community Partnership Scholarship:

Students are selected for this four-year scholarship by the Offices of Admission and Financial Aid based on the criteria established by the Community Partnership Scholarship Program. Students are selected from a group of ten high schools in New York City and Connecticut.

John T. Gorman, Jr. '54 Scholarship:

Established by John T. Gorman, Jr. in 1984 to provide undergraduate students with financial aid.

Simon Harak and Fr. John P. Murray, S.J. Glee Club Scholarship:

Created in 1976, this endowed scholarship provides annual financial aid assistance to members of the University Glee Club. Preference is given to students who are sons or daughters of Glee Club alumni.

William Randolph Hearst Foundation Scholarship:

An endowed scholarship fund established in 1986 by the William Randolph Hearst Foundation to assist Charles F. Dolan School of Business students with financial need.

William Randolph Hearst Foundation Community Partnership Scholarship:

Students are selected for this four-year scholarship by the Offices of Admission and Financial Aid based on the criteria established by the Community Partnership Scholarship Program. Students are chosen from a grouping of ten high schools in New York City and Connecticut.

Cornelius A. Heeney Scholarship:

This endowed scholarship fund established by Joseph '63 and Moira Russoniello gives preference to a student from the San Francisco Bay area and is awarded based on academic achievement, strength of character and demonstrated financial need.

Walter G. Ryba, Jr. Memorial Scholarship:

This fund honors the memory of the late Dr. Walter G. Ryba, Jr., who served as dean of the Charles F. Dolan School of Business from 1998-2000. Awarding is decided with a preference for a person of color with demonstrated need and who has shown significant leadership in academics, student activities, and athletics in high school.

Saint Michael the Archangel Scholarship:

Established in 1988 by an anonymous donor, this scholarship is to be awarded to a minimum of two students each year, preferably from Fairfield or Bridgeport. Preference is given to a student of Polish ancestry.

Casper A. Scalzi '52 Scholarship:

An endowed fund established by Casper Scalzi, a member of the Class of '52, to provide financial assistance with a preference for a student with demonstrated need majoring in mathematics.

Paul Scolaro '78 Memorial Scholarship:

A fund established by family, alumni, and friends in memory of Paul J. Scolaro. Preference is given to a modern language major at the recommendation of the department. Academic achievement, financial need, and University community involvement are the basis for the award.

Rev. Bernard M. Scully, S.J., Memorial Scholarship:

Established in 1996 on the 10th anniversary of Fr. Scully's death. It has been underwritten by parishioners and friends at St. Agnes Church in Greenwich, Conn., where Fr. Scully served as a pastoral assistant. Fr. Scully also taught mathematics at Fairfield from 1960 through 1985.

Arthur R. Sekerak Memorial Scholarship:

This scholarship was set up by friends of Arthur Sekerak in 2004. It was established to provide annual scholarship assistance to students who demonstrate financial need.

September 11 Scholarship:

This scholarship benefits children of alumni and rescue worker victims of the Sept. 11, 2001 tragedy. Recipients must qualify for admission and, similar to other University scholarships, must offer evidence of demonstrated need.

Isabelle C. Shea Nursing Scholarship:

An endowed fund established in 1984 by the George A. Long and Grace L. Long Foundation to honor the memory of Mrs. Shea, a long-time friend of Fairfield University. Provides financial aid assistance with a preference for nursing students.

Christopher Slattery Fairfield Memorial Scholarship:

This scholarship was established in 2002 and honors the memory of Christopher Slattery '92 who died in the World Trade Center attack on Sept. 11, 2001. Established by his family and friends, the scholarship gives preference to students who attended Chaminade High School in Mineola, N.Y., Chris's own alma mater.

James D. '70 and Terese K. Small Scholarship:

Established in 1990 by the family and friends of this alumnus who had forged a successful career in banking and died at the age of 42, the scholarship was later amended to remember his late widow. Preference goes to students with financial need who have a parent working in the banking industry.

Virginia Spillane and Family Golf Scholarship:

This scholarship was established in 2004 by Todd '81 and Maureen '82 Spillane in loving memory of Virginia C. Spillane. Preference is given to a student who demonstrates financial need, maintains a minimum grade point average of 3.0, and is a member of the men's golf team.

Dan Sullivan/Collette Vacations Scholarship:

Funded in 2008 by Daniel J. Sullivan, Jr. '73, this scholarship is to be awarded annually to a student demonstrating financial need with a preference for students from select high schools and cities in northeastern Rhode Island.

John J. Sullivan Scholarship:

A fund established by friends of the late John J. Sullivan, first selectman of the Town of Fairfield, Conn., from 1959 to 1983, to provide financial assistance with a preference for a student who is a politics major.

Surdna Foundation Scholarship:

An endowed fund established in 1985 to underwrite scholarships for the benefit of minority students.

Janet W. Tanner Scholarship:

This endowed fund was established in 1998 for the benefit of AHANA students with demonstrated need.

Kathleen Nolan Tavino '80 Nursing Scholarship:

Established in 1997 by family, friends, and alumni, to honor the memory of this 1980 alumna. This endowed award is a special memorial scholarship to provide financial assistance with a preference for nursing students. This scholarship is intended to benefit today's nursing students whose hopes and ambitions reflect the values that inspired Kathleen Nolan Tavino's life and work.

Taylor Family Scholarship:

A scholarship to be awarded to a student with demonstrated financial need.

Aileen Thomann '94 Memorial Scholarship:

Established in January 1992 by her family, this scholarship honors the memory of Aileen Thomann, a member of the Class of 1994 who was very involved in the music ministry at Egan Chapel and who died during her sophomore year. There are no restrictions other than financial need, although preference is given to a member of the Loyola Chapel Singers.

Helena S. Thompson Scholarship:

An endowed fund, set up by the estate of Helena S. Thompson, to provide financial assistance to students with need. Preference is given to students studying the arts and education.

Robert A. Torello '56 Scholarship:

This fund provides an award to an incoming freshman with one or both parents deceased. The fund is supplemented by proceeds from the Robert A. Torello Annual Memorial Scholarship Golf Tournament held in Orange, Conn.

Daniel P. and Grace I. Tully Scholarship:

Established in 1997 by the Merrill Lynch Foundation, this endowed scholarship fund will help meet the financial aid needs of a Fairfield student, preferably one majoring in economics.

Alice Lynch Vincent Scholarship:

Created by Francis T. "Fay" Vincent, former university trustee, to assist qualified students who have demonstrated financial need.

Dr. Joan Walters Scholarship:

This fund was established in 2000, by William '67 and Jacqueline Egan, in honor of retired faculty member Joan Walters. Preference is given to students majoring in economics.

Washington Family Scholarship:

An endowed fund that is given to a student with demonstrated financial need as determined by the Office of Financial Aid.

Leo '58 and Kathleen Waters Scholarship:

A scholarship fund established by Mr. and Mrs. Waters to provide financial assistance to Fairfield University students.

Edmund J. Weinrich Memorial Scholarship:

Established in memory of Edmund J. Weinrich, founder of Weinrich Advertising and Communications, Inc. . in appreciation for his work since 1972 in making Innovation Data Processing, Inc. in Clifton, New Jersey the success that it is today. This scholarship is awarded with a preference for juniors from New Jersey who have a minimum G.P.A. of 3.0 and are majoring in Communication, English, Marketing or New Media and Film with interest in a career in advertising, marketing and communications.

Wesley T. Wood Scholarship:

An endowed scholarship established in 1988 by Mr. and Mrs. Wesley T. Wood, whose two children are graduates of Fairfield University. Mr. Wood is a past member of the University's Trustee Advisory Council. The fund benefits deserving students with demonstrated need.

Dennis Yee/Patricia Farrell Family Foundation Scholarship:

This endowed fund was established in 2004 to provide financial assistance with a preference for Asian students. The scholarship is need based and recipients must maintain high academic standing.

Stephen J. Zales '81 Scholarship:

Established in 2006 by Stephen J. '81 and Grace Zales. Preference is given to finance majors with demonstrated need and strong academic potential.

Ernesto Zedillo Scholarship:

The Ernesto Zedillo Scholarship at Fairfield University was established by the Corrigan Foundation in 2004 as part of the University's endowed Multicultural Scholarship Fund. The Zedillo Scholarship recognizes academic achievement for students in the College of Arts and Sciences pursuing their studies in the humanities or the behavioral and social sciences, students of Mexican heritage, and financial need. The Ernesto Zedillo Scholar will be an undergraduate entering his or her sophomore, junior, or senior year at Fairfield.

The Atwell Family Scholarship

A scholarship established by Bill and Peggy Atwell P'08 in 2013 to provide financial assistance to deserving students from the Charles F. Dolan School of Business.

The Beckwith Family Scholarship

A scholarship established by Mark '80 and patti Beckwith to provide assistance to students with financial need.

Barbara M. Berchem Memorial Scholarship

An endowed award established in 1988 by Robert M. Berchem '62, to honor the memory of his mother. This scholarship has a preference for a student from a single-parent family, is the first generation of his/her family to attend college, and comes from Milford, CT.

Carlucci Family Scholarship

A scholarship established by Joseph and Mary Carlucci P'10,'09 to provide financial assistance to an undergraduate student with financial need.

Isabelle Johnson Conine and Margaret Morris Lee Memorial Dolan School of Business Scholarship

Established by Dr. and Mrs. Thomas Conine in honor of their mothers, this scholarship provides financial assistance to students from the Charles F. Dolan School of Business.

Ferretti Family Scholarship

Established in 2009 by William '68 and Sharon Ferretti to provide assistance to students with demonstrated financial need.

St. Ignatius of Loyola Scholarship

Established in 2012 by an anonymous donor to provide financial aid to students with demonstrated need.

Eddie and Gloria Searight Scholarship

Established in 2012 by former Fairfield Men's Basketball coach Ed Cooley to provide assistance to a student with demonstrated financial need.

The John and Mary Zandonella Memorial Charitable Gift Fund

Established in 2012 by the Estate of John and Mary Zandonella, this fund provides financial assistance to students with demonstrated financial need and scholastic achievement who are residents of Connecticut and graduates of Connecticut high schools.

For further information about financial aid at Fairfield University, please contact the Office of Financial Aid at (203) 254-4125 or finaid@fairfield.edu, or call the Office of the Bursar, (203) 254-4000, ext. 2165, or write to either office at Fairfield University, 1073 North Benson Road, Fairfield, CT 06824-5195.

Academic Policies

Philosophy of Education

Fairfield University has, as its primary objective, the development of the creative intellectual potential of its students within a context of religious commitment.

Fairfield believes in the particular excellence of a liberal education. In an effort to achieve this objective, it requires each student to take courses from five areas of knowledge: mathematics and the natural sciences, history and the social and behavioral sciences, philosophy and religious studies, English and the arts, and modern and classical languages. Thus assured of a basic, well-rounded education, students are free to pursue a major field of study in preparation for scholarly or professional pursuits.

To assist the student in the quest for truth, the University promotes dialogue between teacher and student, between student and student, between teacher and teacher. This dialogue takes place in an environment of absolute freedom of inquiry.

Normal Academic Progress

Academic Year

The academic year begins in early September and ends in late May, with recess periods at Christmas and in the spring. It is divided into two semesters, each extending over a period of about 15 weeks. The semester hour is the unit of instructional credit. The class day begins at 8 a.m. and is divided into class periods of 50, 75, or 150 minutes and laboratory periods of two, three, or four hours.

Admission Expectations

Undergraduate students admitted into the University on a full-time basis have the benefit of co-creating a premiere educational opportunity, one that attends to their educational, spiritual, vocational, and civic development across an intentional four-year course of study. We seek, of course, to expand students' awareness, during their time at Fairfield, of the many possibilities a Fairfield education makes available to them.

Undergraduate students admitted into the University on a full-time basis are expected to remain fulltime until they graduate.

In the College of Arts and Sciences, the Dolan School of Business and the School of Engineering consultation with the appropriate dean is required for a full-time student to switch to part-time status. Rules and their financial implications for movement from full-time to part-time will be clear at the time of matriculation. Reasons to switch may include personal hardship, such as a documented medical condition that requires a reasonable accommodation, unexpected and substantial family responsibilities, the first semester of return from an academic or medical leave of absence, fifth year seniors, etc.

Unexpected emergency situations that arise during a term would be handled through the normal withdrawal process. Part-time status may be an alternative to a full educational leave of absence.

Full-Time Status

The normal course load for a matriculated student is five courses per semester, equivalent to 14 to 19 credit hours. To maintain full-time status, a matriculated student must be registered for a minimum of 12 credit hours each semester.

Credit Hours

Classes at Fairfield University meet three times a week for 50 minutes each meeting for a three credit course; twice a week for 75 minutes each meeting for a three credit course; once a week for 2.5 hours each session for a three credit course. Classes meet four times a week for 50 minutes each meeting for four credit courses.

Class Ranking System

Student rank is based on total credit hours completed and recorded.

Class	Credit Hours Earned	Year
First-year	0 through 29	1
Sophomore	30 through 59	2
Junior	60 through 89	3
Senior	90 through 120	4

Degree Requirements

At the time of graduation, a student must have earned a minimum of 120 credits and completed at least 38 three- or four-credit courses, depending on the course of study. However, no simple accumulation of credits is sufficient - in itself - to qualify for a degree from Fairfield University. Rather, students are expected to have completed with success all of the assigned courses that constitute the curriculum of their choice. The curriculum consists of courses that fall into the required categories of core curriculum, major, and electives. A second major, minor, and concentration are also an option. Students must have a minimum grade average of 2.0 (C) or better overall and in their major. Students must abide by the terms of the University's residency requirement, set forth below. In addition, students are expected to complete their undergraduate degrees within 10 years of beginning their studies.

Academic Progress

For academic advancement from year to year, in good standing, it is not enough that students pass all courses; in addition, they must maintain a specified cumulative average.

To be eligible for graduation, a Fairfield student must have an overall grade point average of 2.0 or better at the conclusion of the senior year. To progress toward satisfaction of that requirement, students advancing from the first year to the sophomore year are expected to have a weighted cumulative GPA of 1.80 or better. By the start of the junior year, students are expected to have a weighted cumulative GPA of 1.90 or better. In advancing to the senior year, students should have an overall cumulative GPA of 2.0 or better.

Although students who do not meet the foregoing standards will be permitted to continue their studies at Fairfield University, they will be notified that they are not advancing satisfactorily. Furthermore, they will be warned that they are in jeopardy of not graduating with their class. Such students will be offered special assistance from the academic and student support divisions. In addition, they will be strongly encouraged to enroll in summer or winter intersession courses at Fairfield University in order to improve their GPA.

Students in the School of Nursing must meet University promotion policy requirements. In addition, to remain in the nursing major, students must meet promotion policy requirements established by the School of Nursing. These are available in the School of Nursing section of the catalog.

Residency Requirement

To merit a Fairfield University degree, at least 60 credits must be taken at Fairfield. This includes the last 30 semester credits immediately preceding graduation that must be earned at Fairfield University.

Registration Requirement

All matriculated full-time undergraduate students must register for classes by Dec. 1 for the following spring semester, and by May 1 for the following fall semester. If a student is not registered by these dates, the University will presume him or her to be withdrawn at the end of the current semester. At that time, all residence hall and financial aid commitments will be terminated.

Graduation Information

Diplomas are awarded in January, May, and August. All students who have been awarded diplomas within the year are invited to participate in the May graduation ceremony.

Students who do not complete all of the requirements for their undergraduate degree, may be granted permission by their Dean to participate in the Undergraduate Commencement ceremonies if they meet the following criteria:

- End of Spring Term Major GPA and overall GPA students must have a minimum overall grade point average of 2.0 and must meet the appropriate major GPA, which is 2.0 unless otherwise stated.*
- Student must need no more than 3 classes to fulfill degree requirements. These courses must be taken at Fairfield in the summer immediately following Commencement.
- Student must send a written request to their Dean's office with proof of course registration by April 15th prior to Commencement.
- Students' names will be announced at graduation, but they will not appear in the printed commencement materials.

** Students whose GPA is contingent on end of term grades will be notified of the approval or denial of their request when grades are posted.*

Attendance

Class Attendance: All students are expected to attend every regularly scheduled class session. The impact of attendance on grading is specified in the syllabus for each course. Unexcused absences may be reported to the appropriate academic dean.

Faculty members should have a policy for dealing with student absence on the syllabus for each course. If a student will miss a class due to an illness/injury, the professor should be notified according to the policy on the syllabus. If a student will miss an exam, quiz or in class presentation due to illness/injury or another type of emergency, the professor should be contacted beforehand. A faculty member may request that the student provide verification of the absence from a health care provider. It is the purview of the faculty member to determine when or if a student absence will be excused.

For further information regarding student absences, please see the Policies and Procedures section of the Student Handbook.

Released Time: A student participating in a University-sponsored event has the right to be excused without penalty or grade jeopardy from exams, student presentations, attendance, and other classroom events during that time, provided the student makes up the required work in the fashion mutually agreed upon by the professor and the student.

Students participating in such University-sponsored events will be allowed to make up any major exams, tests, or quizzes they miss in a course when they are involved in a scheduled event provided that participating students, or the faculty moderator, inform all their professors in writing at the beginning of the semester, or as soon thereafter as possible, once scheduling is confirmed.

University-sponsored events covered by this policy are defined as follows:

Athletics

- all varsity sporting events, including post season tournaments
- all club sporting events

Others

- concerts, plays, or other group performances where the absence of a member would detract from the overall performance

Not included in this policy are departmental clubs.

Grading System

Grades

The quality of student performance in coursework is graded according to the official marks of A, B, C, D, and F. These marks have the following meanings:

- A = Outstanding achievement
- B = Superior level of achievement
- C = Acceptable level of achievement with course material
- D = Minimal achievement, but passing
- F = Unacceptable level of achievement; course must be repeated to obtain credit

The plus (+) may be added to grades of B or C to indicate work performed at the top of that range.

The minus (-) may be added to grades A, B, or C to indicate work performed below that range.

A semester's grade normally will be determined according to the following procedure:

Each course has a syllabus that details the evaluative components of the course and their weighting in determining the final grade

The form of the final, end-of-semester comprehensive evaluation (written examination, take-home, oral exam, paper, etc.) must appear on the syllabus at the beginning of the semester. No form of the final evaluation is to be due prior to the date assigned by the Registrar for that course's final examination. Students are not required to take more than two exams in any final exam day.

In addition to the foregoing academic grades, which indicate the quality of student performance, the notations I (Incomplete) or W (Withdrawal) may appear on a student's grade report.

Grade Point Value

The official mark or final letter grade earned in a course is assigned grade points. The grade points per credit hour and numerical equivalency for letter grades are as follows:

Grade	Grade Points	Numerical Equivalent
A	4.00	93-100
A-	3.67	90-92
B+	3.33	87-89
B	3.00	83-86
B-	2.67	80-82
C+	2.33	77-79
C	2.00	73-76
C-	1.67	70-72
D	1.00	60-69
F	0.00	0-59

Each semester's course grades are computed into a weighted average. To determine a weighted grade point average, the number of credits per course is multiplied by the grade points earned per course. The total number of grade points for all courses is then divided by the number of credits attempted.

Incomplete

A grade of "I" is issued when, due to an emergency situation such as illness, a student arranges with the professor to complete some of the course requirements after the semester ends. All course work must be completed within 30 days after the beginning of the next regular semester. Any incomplete grades still outstanding after the 30-day extension will become Fs.

Course Load

Fairfield University desires to see all undergraduate students make normal progress toward graduation. For full-time students, the normal rate of work is defined as five courses per semester, each bearing three or four credit hours. The minimum rate of work for full-time students is four courses (minimum 12 credit hours) per semester.

Withdrawal from Courses

Students who wish to withdraw from a course after the initial add/drop period may do so by the mid-point of the course (e.g., through the end of the seventh week of a traditional semester) provided that (a) the student's academic dean, in consultation with the course instructor, finds withdrawal to be in the student's best interest (note that a student must maintain 12 credit hours for full-time status). After the mid-point of the term, course withdrawal will only be granted in highly unusual circumstances, such as documented health emergency. Withdrawal after the mid-point of the term will not be permitted simply to prevent receipt of a grade that might not meet the student's satisfaction. In addition, students who have violated the academic honor code may not be eligible for withdrawal. In all approved cases, the University Registrar will record a grade of a "W" (withdrawal) on the student's permanent record. To initiate a request to withdraw from a course, a student must complete a Course Withdrawal Form and meet with his/her academic dean. A "W" may not be granted after final grades have been submitted except in very rare cases, during which an instructor must file a change of grade form.

Repeat Course Policy

When a student repeats a course that was failed, the new grade will be recorded. Grade point values will be averaged into the cumulative average, and the credits will count toward the degree. The original grade will remain on the transcript and be calculated into the cumulative average. When a student repeats a course for which the student has previously obtained a passing grade, the new course and grade will be recorded on the transcript with the notation, repeat course. The original grade and the repeated grade will be averaged into the GPA. The credit for the repeat course will not count toward the degree. The original grade will remain on the transcript.

Transfer Credit

When students begin their university studies at other institutions and subsequently transfer to Fairfield University, the University accepts transfer credit under the following conditions:

- No courses with grades less than C will qualify for transfer.
- Credit will be granted only for specific work completed at regionally accredited institutions whose quality and course content have been approved by the University.
- Only credit hours, not grades, will transfer.
- Credits earned more than 10 years previous to a credit transfer request may not be able to be accepted.

Every transfer student is required to complete at least two years (60 credits) of full-time undergraduate study at Fairfield in order to receive a Fairfield University bachelor's degree.

Early Alerts, Midterm Estimates, & Final Alerts

The academic progress of first-year students and NCAA athletes is monitored through a comprehensive academic Alert system. Early alerts are designed to provide specific feedback about a student's performance in a course at the 4th week; Midterm Estimates are grade reports of C-, D or F received for a student in the 7th week; and, Final Alerts are both a performance and grade report for a student at the 14th week in the semester. Although not part of a student's official academic record, the Alerts and Midterm Estimates are designed to allow faculty advisors, academic deans, and Director of Exploratory Academic Advising to review a student's academic progress throughout the year. Each student who receives an Alert or Midterm Estimate is individually advised by an academic dean or director. The goal is to connect students who may be having difficulty or who are academically at-risk to the appropriate University academic and support resources.

Grade Reports

Grade reports are issued to students by the Registrar via the student Web portal at the end of each semester.

Disruption of Academic Progress

Academic Probation

The purpose of academic probation is to alert the student and the institution to the problems associated with the student's academic performance and to recommend or implement strategies for improvement. The continuation of poor academic performance will result in the dismissal of the student. Faculty advisors are notified of all advisees placed on academic probation.

A student placed on academic probation will remain on academic probation until the overall GPA is at or above the requirements specified below.

A student will be removed from academic probation as soon as his/her cumulative GPA is equal to or greater than the requirement on the basis of subsequent courses completed at Fairfield during the next semester or during special January or summer sessions.

A student on academic probation is ineligible to participate in extracurricular or co-curricular activities during any semester in which the student is on probation. A student on academic probation may petition the Senior Vice President for Academic Affairs for the right to participate in extra- or co-curricular activities. The appeal must contain a valid and compelling reason why restriction of extra- or co-curricular activities is inappropriate, and must demonstrate effectively that the activity will contribute an improvement in academic performance.

First Year Students: First semester, first-year students with a GPA below 1.90 will not be placed on academic probation for their second semester, but they will lose their rights to participate in extracurricular or co-curricular activities. By the end of the student's second semester, or the first year at Fairfield, students will be placed on academic probation if the overall GPA is below 1.90.

Sophomores: Sophomores will be placed on academic probation if the overall GPA is below 1.90.

Juniors and seniors will be placed on academic probation if the overall GPA is below 2.00.

Academic Dismissal

Students meeting any of the following conditions will be dismissed from the University:

- A student who at the end of the semester has received the grade of F in three or more courses.
 - A student who at the end of the academic year has received the grade of F in three or more courses.
 - A sophomore, who regardless of incompletes, while on academic probation and enrolled full time (i.e., attempting a minimum of 12 credit hours), proceeds to earn a semester GPA below 1.90.
 - A junior or senior, who regardless of incompletes, while on academic probation and enrolled fulltime (i.e., attempting a minimum of 12 credit hours), proceeds to earn a semester GPA below 2.00.
-

Students are removed from registered courses based on the date of their dismissal letter. Students who have been dismissed from the University for reason of academic failure are expected to remain away for at least a full semester (fall or spring) before seeking readmission. Such individuals lose all entitlement to institutionally funded financial aid. Except in extraordinary circumstances, students who are academically dismissed a second time will not be considered for readmission.

Voluntary Withdrawal from University

To apply for a voluntary withdrawal, a student must complete the following steps:

1. To discuss voluntarily withdrawing (for non-medical reasons); contact the appropriate Academic Dean's Office. This meeting is necessary to facilitate the withdrawal process and to discuss any future plans to return to the University.
College of Arts and Sciences, CNS 100, ext. 2221
Exploratory Academic Advising, Kelley Center ext. 2222
Dolan School of Business, DSB 1125, ext. 3230
School of Nursing, SON 102, ext. 4150
School of Engineering, MCA 106, ext. 4147
2. The student must submit a written request for withdrawing from the University, including the reasons for the withdrawal. Voluntary withdrawals from the University are subject to the following conditions:

Note: If a student wants to withdraw when classes during the traditional semesters are not in session, the student must still submit a letter to the Academic Dean's Office. Students scheduled to live in University-housing should send a copy of that letter to the Office of the Dean of Students.

- After meeting with an administrator in your Academic Dean's office, all resident students must set up a meeting with an administrator in the Office of the Dean of Students to discuss non-academic-related issues (housing, financial aid, Stag Card, student account, etc.) pertaining to the student's withdrawal from the University. Failure to set up this meeting will result in continuation of your financial obligation to the University. The Office of the Dean of Students is located in BCC 408, ext. 4211.
- There are no pending student conduct issues.
- The student is not liable for academic withdrawal due to insufficient progress or excessive absence.
- The student has settled all financial obligations to the University.
- Voluntary withdrawals cannot be granted retroactively.

Readmission after a Voluntary Withdrawal:

To seek readmission following a voluntary withdrawal, contact Dr. Mary France Malone in the Senior Vice President for Academic Affairs (SVPAA) Office in CNS 300. This contact should be done in the form of a personal meeting if at all possible.

1. The student seeking readmission must write a letter stating the rationale for the request including why the student is ready and wants to return at this time. The letter should be sent in advance to Dr. Mary France Malone in the SVPAA Office in CNS 300 or to Malone@fairfield.edu. The letter should include name, ID, address, school, major and semester that you wish to return to the University.
2. After formal review of the student's request, the Academic Dean's Office will review whether the student should or should not be readmitted. Those applications supported for readmission will be forwarded to the SVPAA Office for an official letter of readmission to the student. The student may not register for classes or be assigned University-housing until the official letter of readmission is reviewed and processed.
3. Residency and your readmission: Students who voluntarily withdrew from Fairfield University and are readmitted as full time students are expected to live on campus and will be assigned a residential space on campus by the Office of Residence Life at the time their readmission request is approved. Students who were not voluntarily withdrawn from the University (this would include but is not limited to medical withdrawals, academic withdrawals and disciplinary withdrawals) will need to specifically request on-campus housing, and that request is subject to the review and approval of the Office of the Dean of Students.

Additional questions or concerns can be directed to the Academic Dean's Office or the Office of the Dean of Students.

Medical Withdrawal from the University

The following process applies to students who wish to withdraw from Fairfield University for medical reasons. A student may request and be considered for a medical withdrawal when extraordinary circumstances prevent that student from continuing with classes. Medical withdrawals cover both physical as well as mental health difficulties.

1. To discuss withdrawing as a student for medical reasons, contact the Office of the Dean of Students (ext. 4211, BCC 408), Health Center (ext. 2241, Dolan Hall), or Counseling and Psychological Services (ext. 2146, Dolan Hall). Most students who seek to withdraw for medical reasons have been utilizing the services of the Health Center or Counseling and Psychological Services. Therefore, those students will most likely initiate their request through a member of the medical staff or a counselor. Information from personal or private physicians or psychologist is subject to review by the University, which has final decision making authority on the withdrawal request.

2. A request for a Medical Withdrawal must be made in writing or in person to the Office of the Dean of Students (but not the content of the request or the documentation supporting it). This office will review the request along with the opinion of the Health Center or Counseling and Psychological Services, and make a decision based on such endorsement or opinion. Where necessary in order to fully consider a request, the student may be required to provide the Office of the Dean of Students with a release of information. Where a withdrawal request is granted, arrangements must be made in advance of the actual withdrawal for students to return their key, their StagCard, and to establish a move-out with the University. The institutional refund policy applies.
3. A request for a medical withdrawal (whether physical or mental health based) must include at a minimum: a. an explanation of why the student is unable to perform the essential academic functions of a student; b. complete and timely documentation from a physician or other appropriate health care provider who is competent to provide an opinion as to the nature, severity, and duration of the illness; and c. authorization from the requesting student to allow the Director of the Health Center or the Director of Counseling and Psychological Services to contact the attending medical or health care provider if, after review of the documentation provided, it is determined that more information is required.
4. Medical documentation should generally be from a health care provider who provided treatment contemporaneous with, and in relation to, the condition(s) which form the basis for the requested withdrawal.
5. A medical withdrawal is an extraordinary remedy and is reserved for those students who have been presented with the extraordinary circumstances of the unanticipated physical or mental health condition. While each request for a withdrawal will be considered on its own merits, students should be aware that the following do NOT constitute an "extraordinary circumstance" and will not support a request for a medical withdrawal: failing to attend class, insufficient academic performance, financial difficulties, dissatisfaction with course materials or offerings, change of interest or major, or inability to meet all curricular and extracurricular commitments. Medical withdrawals cannot be granted retroactively.

Readmission to the University after a Medical Withdrawal

1. To seek readmission following a medical withdrawal, the student must write a letter making the formal request and state the rationale supporting the request. A copy of this letter should be sent to Dr. Mary France Malone in the Senior Vice President for Academic Affairs (SVPAA) Office in CNS 300 or to Malone@fairfield.edu and to the Office of the Dean of Students in BCC 408 or dosooffice@fairfield.edu. The letter should include name, ID, address, school, major and semester that you wish to return to the University. If medical documentation is required, the student should simultaneously submit that information to either the Health Center (when medical situation is physical in nature) or Counseling and Psychological Services (when medical situation is psychological in nature). That information will be reviewed and any necessary contact with outside care providers or physicians will be made.
2. The Office of the Dean of Students will ask the Health Center or Counseling and Psychological Services for their evaluation of the request. Upon receipt of that information, the Office of the Dean of Students will contact the student to arrange an appointment in person if at all possible or over the phone if necessary to go over the request.
3. After formal review of the student's request for readmission, the office of the Dean of Students will decide whether the student should or should not be readmitted. Those applications supported for readmission will be forwarded to the SVPAA Office for an official letter of readmission to the student. The student may not register for classes or be assigned University housing until the official letter of readmission is issued by the SVPAA Office.
4. Fairfield University recommends that all students seriously consider purchasing tuition refund insurance. Students with existing medical or psychological issues are especially encouraged to investigate such insurance. Information is available from the Office of the University Bursar.
5. Residency and your readmission: Students who voluntarily withdrew from Fairfield University and are readmitted as full time students are expected to live on campus and will be assigned a residential space on campus by the Office of Residence Life at the time their readmission request is approved. Students who were not voluntarily withdrawn from the University (this would include but is not limited to medical withdrawals, academic withdrawals and disciplinary withdrawals) will need to specifically request on-campus housing, and that request is subject to the review and approval of the Office of the Dean of Students.

Any questions about the withdrawal or readmission process please contact (203) 254-4211.

Credits From Other Institutions

Any courses taken at another institution must be pre-approved by the dean of the student's school to be eligible for transfer credit. Only credits (not grades) are transferable. For each approved course taken at another institution, credits will be accepted in transfer only if the student has earned a grade of C or better (2.00 GPA and a numerical equivalency of no lower than 73) in that course. Official transcripts should be forwarded to the dean upon completion of pre-approved coursework at other institutions.

Students are cautioned that deans will grant permission to take courses elsewhere only when the student can demonstrate compelling reasons to do so. Typically, students attend other institutions while on approved Educational Leave of Absence during the fall and/or spring semester to participate in a study abroad program or to take advantage of a special curriculum offered at another U.S. institution or to enroll in courses during the summer or winter vacation.

In all cases, the following restrictions apply:

- Of the 120 or more credits required for the bachelor's degree, a minimum of 60 of those credits must be earned at Fairfield University.
- Students are permitted to take no more than two courses at another institution during a summer or winter vacation period.
- The last 30 credits earned toward a student's degree must be completed at Fairfield University or through a program that issues Fairfield University course credit.

Advanced Placement

While in high school, some students pursue one or more college-level Advanced Placement course. Fairfield University will award three or four hours of credit toward graduation for each AP course taken by a student, provided that the student has taken an Advanced Placement Test prepared by the CEEB program and obtained a test score of four or five. It is the discretion of college/school officials to determine if such AP credits can be used to exempt students from specific University courses or requirements. Normally, AP credit will not exempt a student from requirements in his/her major. No student will be awarded more than a total of 15 AP credits by Fairfield University.

Below is a partial list of AP tests submitted by students for advanced placement, along with their Fairfield University equivalent.

AP Test	Fairfield Course Equivalent	Credits
Biology	BI 170 General Biology I	4
Chemistry	CH 111 General Inorganic I	4
English Composition	EN 11 Texts and Contexts I	3
English Literature/Composition	EN 11 Texts and Contexts I	3
European History	HI 10 Origins of the Modern World	3
U.S. History	HI Elective	3
Calculus AB	MA 171 Calculus I	4
Calculus BC	MA 171-172 Calculus I and II	8
Computer Science A	CS 131 Computer Programming I	3
French Language	FR 210 Intermediate French	3
German Language	GM 210 Intermediate German	3
Italian Language	IT 210 Intermediate Italian	3
Spanish Language	SP 210 Intermediate Spanish	3
Physics B	PS 15 General Physics I	4
Physics C	PS 15-16 General Physics I-II	8
Psychology	PY 101 Psychology	3
Statistics	MA 17 Introduction to Probability and Statistics	3
U.S. Government and Politics	PO 11 Introduction to American Politics	3

Higher Level International Baccalaureate Courses

Fairfield University recognizes the advanced nature of Higher Level International Baccalaureate courses. Generally, three credits will be awarded toward a Fairfield degree for a Higher Level IB course taken by a student, provided a grade of six or seven is achieved. Final determination concerning the amount of credit and whether or not it can be used to exempt students from specific University courses or requirements rests with the dean in consultation with the academic department. Normally, Higher Level IB credit will not exempt a student from requirements in his/her major. Students will be awarded a maximum total of 15 Higher Level IB credits.

College Courses Completed While in High School

High school students who earn college credit while still enrolled in high school can transfer those credits to Fairfield University if the following conditions are met:

- A grade of C or better
- The official college transcript is sent to Fairfield
- The student's high school counselor sends written verification that the college credits or coursework were not used to fulfill high school graduation requirements, either in subject area or credits.

No more than a total of 15 credits for college courses completed while in high school will be accepted by Fairfield. The dean, in consultation with the appropriate curriculum area, determines that the course has met Fairfield's curriculum standards.

Leave of Absence

Educational Leave of Absence

Matriculated students may apply for an educational leave of absence for a fall or spring semester or for a full academic year in order to study abroad or for the Washington, D.C., semester. Educational leaves are granted by the associate/assistant dean of the student's school or college. To be eligible for an educational leave of absence, a Fairfield University student must have an overall GPA of 2.80 or better at the time of application. In addition, the student must have a record of good academic and social standing for the semester immediately preceding application. Students who wish to be granted educational leave of absence must complete all official paperwork with the study abroad coordinator by Feb. 1 for the following year.

All students granted educational leaves by Fairfield University will be charged a fee for maintenance of their matriculation at Fairfield. Furthermore, students who study elsewhere in non-affiliated programs lose their entitlement for institutional financial aid for the period of the leave.

Transcripts

Application for transcripts should be addressed to the University Registrar's office and should state the name and address of the official to whom the transcript is to be mailed. In accordance with the general practice of colleges and universities, complete official transcripts are sent directly by the university, not transmitted by the applicant. Transcripts will not be processed during examination and registration periods. Requests for transcripts should be made one week in advance of the date they are needed.

Academic Freedom And Responsibility

About Academic Freedom and Responsibility

The statement on academic freedom, as formulated in the 1940 Statement of Principles endorsed by the AAUP (American Association of University Professors) and incorporating the 1970 interpretive comments, is the policy of Fairfield University. Academic freedom and responsibility are here defined as the liberty and obligation to study, to investigate, to present and interpret, and to discuss facts and ideas concerning all branches and fields of learning. Academic freedom is limited only by generally accepted standards of responsible scholarship and by respect for the Catholic commitment of the institution as expressed in its mission statement, which provides that Fairfield University "welcomes those of all beliefs and traditions who share its concerns for scholarship, justice, truth, and freedom, and it values the diversity which their membership brings to the university community."

Freedom of Expression

As an academic institution, Fairfield University exists for the transmission of knowledge, pursuit of truth, development of students, and the general well-being of society. Free inquiry and free expression are indispensable to the attainment of these goals. Fairfield University recognizes that academic freedom, freedom of expression, and responsibility are required to realize the essential purposes of the University. Academic freedom and responsibility (distinguished from freedom of expression) are herein defined as the liberty and obligation to study, to investigate, to present, interpret, and discuss facts and ideas concerning all branches and fields of inquiry.

Student Rights

As constituents of the academic community, students should be free, individually and collectively, to express their views on issues of institutional policy and on matters of general interest to the student body.

Fairfield University students are both citizens and members of the academic community. As citizens of a private institution, Fairfield's students enjoy the same freedom of speech, peaceful assembly, and right of petition that students at other private institutions enjoy as accorded by law, and as members of the academic community, they are subject to the obligations which accrue to them by virtue of this membership. Faculty members and administration officials should ensure that institutional powers are not employed to deprive students of their rights as accorded to them by law and University policy. At the same time, the institution has an obligation to clarify those standards which it considers essential to its educational mission and its community life. These expectations and regulations should represent a reasonable regulation of student conduct.

As members of the academic community, students should be encouraged to develop the capacity for critical judgment and to engage in a sustained and independent search for truth. They do this within the requirements of the curriculum and the courses in which they are enrolled.

The professor in the classroom and in conference should encourage free discussion, inquiry, and expression. Student performance should be evaluated solely on an academic basis, not on opinions or conduct in matters unrelated to academic standards. This means that students are free to take reasoned exception to the data or views offered in any course of study and to reserve judgment about matters of opinion, but they are responsible for learning the content of any course of study for which they are enrolled. Students in professional programs are expected to understand and uphold the standards required in their profession.

Students bring to the campus a variety of interests previously acquired and develop many new interests as members of the academic community. They should be free to organize and join associations to promote their common interests. Students and student organizations should be free to examine and discuss all questions of interest to them and to express opinions publicly and privately. Students should be allowed to invite and to hear any person of their own choosing. Those procedures required by an institution before a guest speaker is invited to appear on campus should be designed only to ensure that there is orderly scheduling of facilities and adequate preparation for the event, and that the occasion is conducted in a manner appropriate to an academic community. Guest speakers are subject to all applicable laws, and to the University policies on harassment and discrimination. Students' freedom of expression extends to their ability to express their opinions in writing or through electronic means, and to distribute and post materials expressing their opinions. Any restrictions should be designed only to ensure the orderly use of space and facilities, to provide reasonable restrictions on commercial messages, to comply with applicable fire, health or safety codes, to comply with the University's Non-Discrimination and Harassment Policy, or to comply with state or federal law. Students should always be free to support causes by orderly means which do not disrupt operations of the institution. At the same time, it should be made clear to the academic and larger community that in their public expressions or demonstrations, students or student organizations speak only for themselves and not the institution.

Student Responsibilities

Freedom of expression enjoyed by students is not without limitations. The rights set forth herein must be balanced against and considered in the context of the following responsibilities:

- Students have the obligation to refrain from interfering with the freedom of expression of others.
- Students have the responsibility to respect the rights and beliefs of others, including the values and traditions of Fairfield University as a Jesuit, Catholic institution.
- Students have the responsibility to support learning, and when learning, to engage others in a respectful dialogue, to never threaten the safety or security of others, and to comply with all University policies prohibiting harassment, hate crimes, and discrimination.

All policies in this catalog and the actions taken under them must support Fairfield University's Mission Statement and the Statement on Academic Freedom.

Honor Code

Fairfield University's primary purpose is the pursuit of academic excellence. This is possible only in an atmosphere where discovery and communication of knowledge are marked by scrupulous, unqualified honesty. Therefore, it is expected that all students taking classes at the University adhere to the following Honor Code: "I understand that any violation of academic integrity wounds the entire community and undermines the trust upon which the discovery and communication of knowledge depends. Therefore, as a member of the Fairfield University community, I hereby pledge to uphold and maintain these standards of academic honesty and integrity."

Academic Honesty

All members of the Fairfield University community share responsibility for establishing and maintaining appropriate standards of academic honesty and integrity. As such, faculty members have an obligation to set high standards of honesty and integrity through personal example and the learning communities they create. Such integrity is fundamental to, and an inherent part of, a Jesuit education, in which teaching and learning are based on mutual respect. It is further expected that students will follow these standards and encourage others to do so.

Students are sometimes unsure of what constitutes academic dishonesty. In all academic work, students are expected to submit materials that are their own and are to include attribution for any ideas or language that are not their own. Examples of dishonest conduct include, but are not limited to:

- Falsification of academic records or grades, including but not limited to any act of falsifying information on an official academic document, grade report, class registration document or transcript.
- Cheating, such as copying examination answers from materials such as crib notes or another student's paper.
- Collusion, such as working with another person or persons when independent work is prescribed.
- Inappropriate use of notes.
- Falsification or fabrication of an assigned project, data, results, or sources.
- Giving, receiving, offering, or soliciting information in examinations.

- Using previously prepared materials in examinations, tests, or quizzes.
- Destruction or alteration of another student's work.
- Submitting the same paper or report for assignments in more than one course without the prior written permission of each instructor.
- Appropriating information, ideas, or the language of other people or writers and submitting it as one's own to satisfy the requirements of a course - commonly known as plagiarism. Plagiarism constitutes theft and deceit. Assignments (compositions, term papers, computer programs, etc.) acquired either in part or in whole from commercial sources, publications, students, or other sources and submitted as one's own original work will be considered plagiarism.
- Unauthorized recording, sale, or use of lectures and other instructional materials.

In the event of such dishonesty, professors are to award a grade of zero for the project, paper, or examination in question, and may record an F for the course itself. When appropriate, expulsion may be recommended. A notation of the event is made in the student's file in the academic dean's office. The student will receive a copy.

Student Academic Grievance Procedure

Purpose

Procedures for review of academic grievances protect the rights of students, faculty, and the University by providing mechanisms for equitable problem solving.

Types of Grievances

A grievance is defined as a complaint of unfair treatment for which a specific remedy is sought. This procedure is concerned solely with academic grievances. It excludes circumstances that may give rise to a complaint for which explicit redress is neither called for nor sought, or for those for which other structures within the university serve as an agency for resolution.

Academic grievances relate to procedural appeals, academic dishonesty appeals, or quality of work appeals.

Procedural appeals are defined as those seeking a remedy in which no issue of the quality of a student's work is involved. For example, a student might contend that the professor failed to follow previously announced mechanisms of evaluation.

Academic dishonesty appeals are defined as those seeking a remedy because of a dispute over whether plagiarism, cheating, or other acts of academic dishonesty occurred. Remedies would include but not be limited to removal of a file letter, change of grade, or submitting new or revised work.

Quality of work appeals are defined as those seeking a remedy, following the completion of a course, because the evaluation of the quality of a student's coursework is alleged to be prejudiced or capricious.

Time Limits

The procedure herein defined must be initiated by the end of the subsequent fall or spring semester after the event that is the subject of the grievance. If the grievance moves forward, all subsequent steps of the informal process must be completed and the formal process must be initiated before the end of the second semester subsequent to the event that is the subject of the grievance.

Informal Procedures

Step one: The student attempts to resolve any academic grievance with the faculty member. If, following this initial attempt at resolution, the student remains convinced that a grievance exists, she or he advances to step two.

Step two: The student consults with the chair or program director, bringing written documentation of the process to this point. If the student continues to assert that a grievance exists after attempted reconciliation, she or he advances to step three.

Step three: The student presents the grievance to the dean of the school in which the course was offered, bringing to this meeting documentation of steps one and two. After conversation with the instructor of record and the department chair/program director, the dean will inform the student whether or not the grade shall be changed by the instructor of record. If the student is dissatisfied with the outcome, the dean will inform the student of the right to initiate formal review procedures.

Formal Procedure

Step one: If the student still believes that the grievance remains unresolved following the informal procedures above, she or he initiates the formal review procedure by making a written request for a formal hearing through the dean to the Senior Vice President for Academic Affairs (SVPAA). Such a request should define the grievance and be accompanied by documentation of completion of the informal process. It should also be accompanied by the dean's opinion of the grievance.

Step two: The SVPAA determines whether the grievance merits further attention. If not, the student is so informed. If, however, the grievance does merit further attention, the SVPAA determines whether it is a procedural appeal, an academic dishonesty appeal, or a quality of work appeal.

For procedural appeals and academic dishonesty appeals, the SVPAA will convene a Grievance Committee according to the process described below, providing the committee with the written documentation resulting from the previous steps in the appeal process.

For quality of work appeals, the SVPAA will request that the chair of the department through which the course is taught, or if the chair is the subject of the grievance a senior member of the department, assemble an ad hoc committee of three department/program members to review the appeal, providing the committee with the written documentation resulting from the previous steps in the appeal process.

Step three: For procedural appeals and academic dishonesty appeals, the Grievance Committee takes whatever steps are deemed appropriate to render a recommendation for resolving the grievance. The committee adheres to due process procedures analogous to those in the Faculty Handbook.

For quality of work appeals, the department committee shall make itself available to meet and discuss the appeal with the student, and shall discuss the appeal with the instructor of record for the course. If the final consensus of the department committee is that the academic evaluation that led to the course grade was neither prejudiced nor capricious, the appeals process ends here.

Step four: For procedural appeals and academic dishonesty appeals, the recommendation from the Grievance Committee is forwarded to the SVPAA in written form, accompanied, if necessary, by any supporting data that formed the basis of the recommendation. Should the Grievance Committee conclude that a change of grade is warranted, the two faculty members on the Grievance Committee will recommend an appropriate grade. In case of disagreement between the two faculty members, the dean chairing the Grievance Committee will decide which of the two recommended grades to accept. The recommended grade change shall be included in the report.

For quality of work appeals, if the final consensus of the department committee is that the academic evaluation that led to the course grade was prejudiced or capricious, the department committee will recommend an alternative course grade. If the instructor of record agrees to change the grade to that recommended by the committee, the appeals process ends here. If the instructor of record declines to change the grade, the department committee shall prepare a written report, including the department committee's recommended grade. The report will be forwarded to the SVPAA and the instructor of record, who may send the SVPAA a written response to the report.

Step five: For procedural appeals and academic dishonesty appeals, the SVPAA renders a final and binding judgment, notifying all involved parties. If such an appeal involves a dispute over a course grade given by a faculty member, the SVPAA is the only university official empowered to change that grade, and then only to the grade recommended by the Grievance Committee.

For quality of work appeals, if the SVPAA agrees with the department committee that the academic evaluation that led to the course grade was prejudiced or capricious, she or he is authorized to change the course grade to the grade recommended in the department committee's report.

Structure of the Grievance Committee

The structure of the Grievance Committee will be as follows:

- Two faculty members to be selected from the Student Academic Grievance Board. The faculty member against whom the grievance has been directed will propose four names from that panel, the student will strike two of those names, and the two remaining faculty members will serve.
- Two students to be selected from a standing pool of eight students elected by the student government. The student filing the grievance will propose four names from that panel, the faculty member will strike two of those names, and the two remaining students will serve.

In the event that any faculty member or student selected through the foregoing process is unable to meet, another elected member of the panel will serve as an alternate.

The Grievance Committee will be chaired by a dean (other than the dean of the school in which the course was offered) to be selected by the SVPAA. The dean so selected will have no vote except in the event of a tie, and will be responsible for overseeing the selection of the Grievance Committee, convening and conducting the committee meetings, and preparing the committee's report(s) and other appropriate documentation.

Due Process Procedure

- a. Both the student and the faculty member shall have the right to be present and to be accompanied by a personal advisor or counsel throughout the hearing.
- b. Both the student and the faculty member shall have the right to present and examine witnesses and to crossexamine witnesses.
- c. The administration shall make available to both the student and the faculty member such authority as it may possess to require the presence of witnesses.
- d. The Grievance Committee shall promptly and forthrightly adjudicate the issues.
- e. The full text of the findings and conclusions of the Grievance Committee shall be made available in identical form and at the same time to both the student and the faculty member. The cost shall be met by the university.
- f. In the absence of a defect in procedure, recommendations shall be made to the SVPA by the Grievance Committee as to possible action in the case.
- g. At any time should the basis for an informal hearing appear, the procedure may become informal in nature.

Grievance Process Complaints

Fairfield University endeavors to resolve all grievances, complaints and disputes in a timely and fair manner. In the event a student believes a complaint remains unresolved after the conclusion of Fairfield University's grievance and/or dispute resolution processes (including all appeals), the student may request that the complaint be reviewed by the State of Connecticut Office of Higher Education. The Office of Higher Education is responsible for quality review of independent colleges and will investigate complaints concerning matters within its statutory authority. For more information or to file a complaint, contact the Office of Higher Education, 61 Woodland Street, Hartford, CT 06105-2326; (800) 842-0229; www.ctohe.org/studentcomplaints.shtml. Fairfield University is accredited by the New England Association of Schools and Colleges (NEASC). Students may contact NEASC at 3 Burlington Woods Drive, Suite 100 Burlington, MA 01803, (855) 886-3272. <http://cihe.neasc.org/>.

The Curricula

Introduction

The various curricula at Fairfield University are arranged into five general categories. The first three categories - core curriculum, electives, and majors - represent coursework that all students are required to complete. The remaining categories - second majors and minors - designate optional coursework. In addition, special features such as an honors program, interdisciplinary learning communities or clusters, independent studies, and internships are available to students.

Pathways to Integration

As a Catholic Jesuit university characterized by academic rigor, integrative ways of thinking, knowing and doing, civic engagement and social responsibility within the humanistic tradition, our mission is to educate our students to become competent, compassionate professionals who will live lives of personal integrity and contribute to the common good. The University is organizing these principles and actualizing our mission under the broad pathways of Engaging Traditions, Creative and Aesthetic Engagement, Global Citizenship, Rhetoric and Reflection, Quantitative Reasoning, and Scientific Reasoning.

In order to embody the university's goals of integrating the core, connecting living and learning, and practicing Jesuit values and to carry this vision into daily work, a set of pathways to integration offers a conceptual structure to organize efforts and aim at common outcomes across the university.

The pathways and their associated student learning objectives assist in getting beyond fragmented learning by constructing meaningful connections among curricular and co-curricular experiences. For students the pathways provide six frameworks to integrate learning across the core within their majors and minors and throughout their living and learning experiences. Integration using these frameworks is facilitated through faculty, staff, and peer advising, through students' own periodic reflections on their progress, and through guided living and learning programs. For faculty and staff the pathways offer a variety of overarching learning objectives that courses, co-curricular activities and learning communities can target as outcomes. Students conducting a science experiment, for instance, might demonstrate learning in how they communicated with team members, used quantitative analysis, and took responsible action as citizens based on their results, in addition to demonstrating their knowledge and skills in scientific reasoning - all as components of an integrated learning outcome. **The goal of the pathways structure is to facilitate integration of recurring educational themes at Fairfield University, and to guide students in identifying these themes across their varied educational experiences.**

Engaging Traditions

Liberal education in the Catholic and Jesuit tradition has always had, at its core, the act of retrieving the manifold traditions of human reflection - philosophical schools, religious traditions of faith and practice, historical accounts of peoples and cultures, and oral and literary traditions. The ability to engage a tradition in its own context is central to a credible and responsible engagement with the world as it is. Always ordered to a new day, however, we not only mediate past and present, but use this knowledge to freshly approach enduring questions and take creative and accountable action in the world.

Creative and Aesthetic Engagement

Creativity is a process of transformation, of taking things, whether they are physical or intellectual, and turning them into something new. Aesthetic Engagement refers to the awareness, understanding, and judgment of the aesthetic properties of art and nature. Such appreciation promotes emotional development, refines ways of seeing, interpreting, and makes life experiences more meaningful.

Global Citizenship

Global citizenship encompasses identities and a sense of self-realization and belonging at many levels of participation and self-realization, from the individual, to family, society, country, the world, and planet earth itself. Even as tensions arise among our arenas of belonging, we navigate such obstacles to work constructively through differences and make the most of growing ethnic, cultural, racial, linguistic and religious diversity. The point is to reflect humbly on our privileges, connect with others, not only know the world but engage with the world, and work towards social justice by transforming society for the greater good.

Rhetoric and Reflection

As habits of mind, rhetorical action and reflection are key principles of Jesuit education. The focus of both is to use thought and language for specific academic, intellectual, and social purposes, and to develop the habit of mindful reflection.

Quantitative Reasoning

In order to perform effectively as professionals and citizens, students must become competent in using, interpreting and presenting quantitative data; in understanding the power and limitations of quantitative reasoning; and in applying basic quantitative skills to support arguments and solve real-life problems.

Scientific Reasoning

This pathway evokes the power and importance of scientific knowledge and analysis in daily life. The questions of science emerge from measured observation of patterns exhibited by the natural world. If the answers to a particular question do not agree with the prevailing model, then the model or representation will change. This also involves taking responsibility for the role of science, and the technologies emergent from the science, in creating a better world for some people, places, and species, but at the same time compromising living standards and conditions for others.

Choice of Curriculum

Descriptions of the various curricula will be found in the college and school sections and, where appropriate, under the discipline heading. For students who desire a curriculum involving an ordered sequence of courses (natural sciences, accounting, mathematics, engineering) the initial choice of program is important; for other students, first-year and sophomore courses provide a solid basis and background for any subsequent decision to major in such areas as economics, English, history, languages, and visual and performing arts.

Students fulfill the curriculum requirements that are in place at the time the student matriculates. Once new changes are in effect, students have the option of remaining with the requirements in effect at the time of their matriculation.

University Course Numbering System

Undergraduate

01-99	Introductory courses
100-199	Intermediate courses without prerequisites
200-299	Intermediate courses with prerequisites
300-399	Advanced courses, normally limited to juniors and seniors, and open to graduate students with permission

Graduate

400-499	Master's and Certificate of Advanced Study courses, open to undergraduate students with permission
500-599	Master's and Certificate of Advanced Study courses
600-699	Doctoral courses, open to qualified Master's students

Core Curriculum

The goal of a Fairfield education is to develop the whole person: an intellectual being who can think clearly, accurately, dispassionately; a social being who cares about others and takes one's place in the world with them; a physical being who knows the laws, limitations, and beauty of the natural world; a spiritual being who seeks to make one's life express the truths of religion and philosophy.

Because Fairfield believes that a liberal education can achieve this goal, the University has developed a core curriculum that all undergraduates must take to acquire a broad background in all academic areas. During their years at Fairfield, students, regardless of major or field of specialization, take from two to five courses in each of five areas.

Within the framework of these five areas, students have a number of options so that fulfilling the requirement can become a stimulating and enjoyable experience while providing the breadth of knowledge necessary for further studies and for life as a well-educated human being.

Options within the Core Curriculum

Area I: Mathematics and Natural Sciences

- Two semesters of mathematics. At least one semester must be a calculus course (MA 19, MA 119, MA 120, MA 145, MA 146, MA 171, MA 172, MA 221, MA 245, or MA 273).
- Two semesters of a natural science. Any two courses in any of the natural sciences, as well as AY 110 or PY 261, fulfill this requirement.

Note: Psychology majors cannot use PY 261 to fulfill this core science requirement.

Area II: History, and the Social and Behavioral Sciences

- Two semesters of history. HI 10 plus one 200-level course. CL 115-116 (Greek and Roman Civilization) may be used to fulfill this requirement.
- Two semesters of anthropology (except for AY 110), communication (CO 100 and CO 130 only), economics, politics, psychology, or sociology. Both courses may be in the same department or they may be in two different departments. Also includes ED 241 for Certificate students only.

Area III: Philosophy, Religious Studies, and Applied Ethics

- Two semesters of philosophy. PH 101 is required followed by a 200-level course.
- Two semesters of religious studies. RS 101 is required followed by a 200-level course.
- One additional course in philosophy, religious studies, or applied ethics.

Area IV: English and Visual and Performing Arts

- Three semesters of English. EN 11 and EN 12 are required, plus one semester of English literature with a course number between EN 100-199. Writing courses (EN/W) do not fulfill the core literature requirement. Selected courses offering literature in translation may also fulfill this requirement - see listings under classical studies as well as modern languages and literatures.
- Two semesters of visual and performing arts.
- One semester must be in the area of art history; film, television & media arts history; music history; or theatre history. The other semester may be selected from any of the three-credit course offerings in art history; film, television & media arts; music; studio art, and theatre.

Area V: Modern and Classical Languages

- Two semesters at the intermediate level of any language listed among the offerings of the Department of Modern Languages and Literatures or the Classical Studies Program.

Diversity Requirements

U.S. Diversity

In order to help students develop a critical consciousness of self and society, all undergraduates are required to take one course that gives significant treatment to aspects of diversity and pluralism in U.S. society. Such courses will explore, in a systematic manner, connections among race, class, and gender, and will examine issues of privilege and difference in U.S. society. Additional aspects of diversity - including religion, sexual orientation, and ethnicity - may also be considered. Approved courses will be designated by a special symbol in each semester's course schedule booklet. This requirement will not add credit hours or an extra course to a student's degree program; students will be able to select a designated diversity course from among core requirement courses, major courses, or electives.

A list of courses that currently satisfy the U.S. Diversity requirement follows. Please note that new courses are added each year and not every course is offered every year.

AC 345	Federal Income Taxation II
AE 262	Ethics/Community
AE 265	Ethics in Education
AE 291	Business Ethics (designated sections)
AE 397	Seminar in Bioethics
AH 165	Black Experience
BL 101	Introduction to Black Studies

World Diversity

In addition to the U.S. diversity course, a world diversity course is required of all undergraduates. This course focuses on a non-Western culture or society, exclusive of Europe and the United States, and their literary, artistic, musical, religious, philosophical, political, economic, or scientific traditions. Though courses primarily emphasizing North American and European topics will not count toward this requirement, courses focusing on Native American, Russian, and pre-Columbian or Latin American cultures can meet the requirement. Core language courses do not meet this requirement while literature and culture courses may satisfy it. Moreover, such a course will not emphasize international relations or business relations vis-a-vis Europe or the United States. A study abroad experience may satisfy this requirement if it meets with the spirit and letter of this mission statement.

A list of courses that currently satisfy the world diversity requirement follows. Please note that new courses are added each year and not every course is offered every year.

AE 270	Ethical Dimensions of Global Violence, War, Terrorism and Humanitarian Intervention

Notes

- Most core courses are taken within the first two years at Fairfield University. However, precisely when students should take various core courses depends, in part, upon their major. The faculty advisor will assist students in selecting a schedule that meets all core requirements. Normally, English (EN 11 and EN 12), mathematics, and foreign languages are included in the student's first-year schedule.
- Students with majors in the Charles F. Dolan School of Business are required to take specific courses as part of their core curriculum and may take two semesters of language at any level in fulfillment of the Area V language requirement. See the Dolan School of Business core section for such course details.
- School of Nursing students take specific courses as part of their core curriculum and are required to complete either the visual and performing arts or the modern language requirement.
- School of Engineering students are exempt from the Area V language requirement and can take CD 211 (Engineering Graphics I) as one of the courses in fulfillment of the Area IV Visual and Performing Arts requirement. Engineering students also take EC 11 (Microeconomics) as one of their Area II Social and Behavioral Science electives and AE 287 (Engineering Ethics) for their Area III Applied Ethics elective.

Electives

All students in B.A. and B.S. programs should have a minimum number of free electives. These electives may be chosen in any area of study, presuming prerequisites are met, and cannot be determined or required by any department or school. These electives may, of course, be part of a student's minor or second major. All students in B.A. programs must have a minimum of eight free electives; students in B.S. programs must have a minimum of four free electives, except in the School of Nursing where two are required.

Major

The major is central to a student's program of study at Fairfield University. It represents an area of specialization consisting of a cluster of related courses drawn from a single department, more than one department, or an interdisciplinary program. Normally, a student must pursue a minimum of 30 credit hours of coursework to complete a major. The course requirements for each major offered by the College of Arts and Sciences are set forth within each departmental section of this catalog; information on individually designed majors is also in this section. Likewise, the requirements for majors within the Charles F. Dolan School of Business, the School of Nursing, and the School of Engineering are found in those sections of this catalog. In all cases, the selection of courses for a particular major must be done in consultation with a faculty advisor from one's major department or school. In each college or school, the proper work of the major is concentrated in the junior and senior years; where preparatory courses are needed, they are taken in the freshman and/or sophomore year. Majors are usually selected at the end of the freshman year or during the sophomore year.

Students declare majors by going to the office of the dean of the appropriate college or school. When a major is declared, the student is assigned a faculty advisor from the major area. To change from one major to another in one's school requires completion of a Change of Major form. The Change of Major form can be obtained from the office of the dean of the student's current school. The form must be signed by the chairperson/coordinator of the major in which the student is currently enrolled, the chairperson/coordinator of the major that the student desires, and the dean of the school. The form is then forwarded to the University Registrar.

Second Major (Double Major)

A student has the option of pursuing a second major at Fairfield University. The courses that constitute a second major must meet the stated requirements for a major program and must be approved by the department or interdisciplinary program in which the second major is located. Students declare second majors by completing a Double Major form that is available in the dean's office of their school. A double major does NOT constitute a double degree.

Minor

In addition to carrying a major, a student may exercise the option of selecting a minor outside the area of specialization. A minor is a cluster of thematically related courses drawn from one or more departments, usually in the range of 15 to 18 credits. Students electing a minor are still required to fulfill the core requirement. In addition to department-based minors, many interdisciplinary minors are also available at Fairfield: American studies; Applied ethics; Asian studies; Black studies; Catholic Studies; Classical studies; Environmental Studies; International studies; Irish studies; Italian studies; Judaic studies; Latin American and Caribbean studies; Peace and Justice Studies; Russian and East European studies; and Women, Gender, and Sexuality Studies.

Because the minor is considered to be a supplement to the student's major program of study, its completion in a given case may not have the same priority as that of a major. In order to select a minor, a student must submit a request and gain approval by the Chair or program director of the prospective minor no later than the Spring registration period of the student's Junior year. The completion of the minor is subject to the availability of the courses selected.

University Honors Program

The Honors Program at Fairfield University is an interdisciplinary course of study open to invited freshmen and sophomores from all of the University's undergraduate schools. Since the program offers a curriculum of team-taught courses and small seminars, it is highly selective. Students who pursue Honors study at Fairfield are highly motivated, passionate about learning, and willing to engage their professors and fellow students in lively discussions about the great ideas that have shaped our culture and world cultures. Honors students at Fairfield also are invited to attend intellectual and cultural events outside the classroom such as Broadway plays, guided museum tours, operas, and faculty-led colloquia on a variety of topics. Though students from all schools participate in the Program, a detailed description can be found in the Honors Program section on page 163.

Option for Graduate Level Courses

Fairfield University undergraduates with permission from their faculty advisor and from the Dean of the school in which the course is offered may take a graduate course for undergraduate credit and as part of their undergraduate load. It would appear on their undergraduate transcript. A student could later petition to have those courses provide advanced standing in their graduate program and it would be up to the faculty to determine if the credits should apply to the graduate program at that point. Student might receive credit for these courses as part of a graduate program if the student did not apply the credits to complete the undergraduate degree.

An undergraduate student who has advanced beyond degree requirements and also has permission from the Dean of the school in which the course is offered may take a graduate level course for graduate credit as part of their regular undergraduate load. The number of graduate courses a full time undergraduate may take would be limited to two. The five year pre-structured programs would follow their own required sequence.

Registration for graduate courses is on a space available basis, with preference given to graduate students. Undergraduates with permission to enroll in a graduate course may petition to register in late August for the fall and early January for the spring.

5th Year Master's Programs

Fairfield offers four dual or integrated degree programs for undergraduate students who are interested in studying toward a master's degree while an undergraduate, with an additional year at Fairfield for continued graduate coursework after the student has completed their bachelor's degree. Interested students should discuss and determine coursework options with their academic advisor during their sophomore year so that the required admission process and course selection can begin. More detailed information can be found on specific 5th Year Programs in the school sections of this undergraduate course catalog.

College of Arts & Sciences (CAS) and the Graduate School of Education and Allied Professions (5th Year Programs in Partnership)

More details about these programs in the listing in the CAS Undergraduate Course Catalog section entitled Degrees Offered.

- M.A. degree in Educational Studies and Teacher Preparation; with an integrated Bachelor of Arts/Science degree in a particular discipline.
- M.A. degree in Industrial/Organizational Psychology; with an integrated Bachelor of Arts/Science degree in a particular discipline.

School of Engineering

More details found in the SOE Undergraduate Course Catalog section on Combined Bachelor's and Master's Degrees.

- M.S. in Electrical and Computing Engineering; a dual degree with Bachelor of Science degree in Electrical or Computer Engineering
- M.S. in Software Engineering; a dual degree with a Bachelor of Science in Software Engineering

One Year Master's Programs

Undergraduate students in the Charles F. Dolan School of Business who excel academically are strongly urged to consider applying to one of the school's graduate programs in business (M.B.A., M.S. in either Accounting or Finance). Beginning the application process and sitting for the standardized entrance exam (GMAT or GRE) can occur as early as the summer prior to the start of one's senior year of undergraduate study. If accepted, and contingent on first completing one's undergraduate degree, a student can begin the Master's program immediately after Commencement in the summer (M.B.A., M.S.-AC) or in the following fall (M.S.-FI).

- M.B.A. degree- students who excel in their undergraduate business core courses may be able to finish the M.B.A. degree on a full-time basis in one year. The M.B.A. provides both a greater breadth of knowledge in key business disciplines, as well as advanced studies in at least one area of concentration.
- M.S. in Accounting- this one year, full-time cohort program begins each summer, at the end of May and concludes at the end of the following spring semester. One of the major benefits of the program is the opportunity for the student to amass additional course credits in order to be "150 ready" for public accounting positions.
- M.S. in Finance- this highly specialized program of study can be completed on a full-time basis in one year, beginning each fall semester. Students seeking both advanced theory and practical applications/skill sets within the field of finance are strongly encouraged to consider this degree.

Students interested in any of these programs are encouraged to make an appointment with the Associate Dean and Director of DSB Graduate programs (please contact ext. 2843).

Cornerstone Courses

The Cornerstone Course program accelerates and intensifies the academic engagement of undergraduate first year students into the living and learning community of Fairfield University. Through these foundational core and major courses, students develop habits of mind and heart that will carry them through to degree completion and beyond. These residential courses also contribute to the integration of the Core curriculum and support mutual respect and co-responsibility within the residence halls.

Independent Studies

The independent study option is available in most departments to students who wish to examine a subject in depth for which no course is available. Such guided studies are designed and pursued by students under the tutelage of a faculty member. This option is restricted to students in their junior and/or senior years of study.

Students should apply to the professor under whose direction they wish to study no later than the normal registration period of the preceding semester. The Independent Study Application form, available from the office of the college dean, must be completed and filed with the Registrar before the project may begin.

For projects of less than a semester's equivalent course work, one or two credit hours may be assigned. For projects of a semester's equivalent coursework, three credit hours, or, with a laboratory component, four credit hours may be assigned.

If students undertake more than one independent study project during their college careers, the total credit hours for all projects may not exceed nine credit hours toward the undergraduate degree.

Student Internships

Students at Fairfield University have an opportunity to earn academic credit and gain practical, on-site work experience by pursuing internships in their major fields of study. Through placements in appropriate businesses, corporations, laboratories, law firms, government offices and agencies, nonprofit organizations, etc. students apply and test principles and theories they have acquired in their coursework. In a typical internship carrying three semester credits, students work 10 to 15 hours per week on site. Internships are coordinated by Fairfield University faculty and on-site supervisors. Through such experiences students can enhance their learning and explore potential careers. Upon graduation, students are frequently offered positions with corporations and agencies sponsoring their internships.

To be eligible for an internship, students must be in good academic standing and must meet all prerequisites prescribed by the major department (e.g. GPA, prior coursework). To register for an internship, a student must obtain prior approval from the faculty member who coordinates the internship program in his/her major department.

A maximum of six academic credits can be earned for internship experience. An internship will not substitute for any other stated course(s) in the student's major field. Further information about specific internship opportunities can be obtained from the departmental chair or the internship coordinator of the specific department.

Scholastic Honors

Dean's List

To qualify for the Dean's List at the conclusion of each semester's work, a student must have completed a minimum of 12 credit hours, have no outstanding or incomplete grades for that semester, and have attained a semester grade point average of 3.50 or better.

Graduation with Honors

Honors at graduation are awarded for the following weighted grade point averages computed for the four years' work:

Summa cum laude	3.85
Magna cum laude	3.70
Cum laude	3.50

Beta Gamma Sigma

Beta Gamma Sigma is an international honor society recognizing the outstanding academic achievements of students enrolled in collegiate business programs accredited by AACSB International - The Association to Advance Collegiate Schools of Business. With more than 440,000 members worldwide, the Society's membership comprises the brightest and best of the world's business leaders. At Fairfield University, the top 7 percent of juniors, the top 10 percent of seniors, and the top 20 percent of graduate students are eligible for membership in the University's Beta Gamma Sigma chapter, which was established in 1998. Each spring, an induction ceremony is held at the Charles F. Dolan School of Business to welcome new members into the Society.

Alpha Sigma Nu

Alpha Sigma Nu, the national Jesuit honor society, serves to reward and encourage scholarship, loyalty, and service to the ideals of Jesuit higher education. To be nominated for membership, undergraduate students must have scholastic rank in the top 15 percent of their class, demonstrate a proven concern for others through involvement in extracurricular activities and service to the University, and manifest a true concern and commitment to the values and goals of the society. The Fairfield chapter was reactivated in 1981 and includes outstanding seniors who are encouraged to reflect scholarship, promote service to the University, and provide greater understanding of the Jesuit ideals of education within the University community.

Phi Beta Kappa

Phi Beta Kappa is the oldest and most widely recognized national academic honor society in the United States. Founded in 1776 at the College of William and Mary in Virginia, the society's aim is to encourage academic excellence in the broad range of the liberal arts. Membership is restricted to students who complete most of their coursework in the liberal studies curriculum; typically those are students who pursue B.A. or B.S. degrees in the College of Arts and Sciences. Fairfield's Zeta Chapter of Phi Beta Kappa was established in 1995. Each spring it installs new members from among the most academically talented upper-class students. Election to this chapter is based on scholastic standing and academic accomplishments and is limited to seniors and a highly select group of juniors.

Other National Honor Societies

Discipline-based national and international honor societies with chapters at Fairfield University include:

- Alpha Kappa Delta - sociology
- Alpha Epsilon Delta - pre-medical
- Alpha Kappa Delta - sociology
- Alpha Mu Gamma - foreign languages
- Alpha Sigma Lambda - adult higher education
- Chi Sigma Chi - counseling, academic and professional (international)
- Chi Sigma Iota - counseling, academic and professional (international)
- Lambda Pi Eta - communication
- Omicron Delta Epsilon - economics
- Phi Alpha Theta - history (international)
- Pi Delta Kappa - education (international)
- Pi Mu Epsilon - mathematics
- Pi Sigma Alpha - politics
- Psi Chi - psychology
- Sigma Iota Rho - international studies
- Sigma Pi Sigma - physics
- Sigma Tau Delta - English (international)
- Sigma Theta Tau - nursing (international)
- Sigma Xi, The Scientific Research Society - scientists and engineers (international)
- Theta Alpha Kappa - religious studies

Study Abroad

An international experience has become an invaluable part of a complete undergraduate education. Fairfield University provides numerous opportunities for study abroad and assistance in navigating the wide array of international study choices. Students in EVERY major have the opportunity to find a program that links major, language, and destination to provide a life-changing experience.

Fairfield offers exceptional learning opportunities for students beyond the classroom including internships, community volunteer work, academic excursions, and events that make your abroad experience enjoyable and meaningful. Visit the Study Abroad website at www.fairfield.edu/studyabroad for more detailed information.

More than 60 percent of Fairfield students participate in some type of international program. With this strong interest in study abroad, the University needs to balance its enrollments between fall and spring semester. Therefore, students need to be flexible about when they will study abroad. All requests will be considered, but not all students will receive placement for their desired semester. Where terms have to be balanced, priority for a particular term will be based on major (for those students who can only study in a specific semester) and GPA. Students planning to study abroad must submit the Study Abroad application online no later than February 1. Students are notified of their semester placement around March 1 of that same year.

An overall GPA of 2.8 is required to study abroad for all programs, including short-term and summer; exceptions are rarely granted. A student must be in good standing with the Dean of Students at the time of application. Individual programs have their own criteria and may require higher GPAs. Students studying in a non-English speaking country must take one course in the local language. Students with advanced language skills can choose to take a content course taught in the local language to satisfy the language course requirement.

Participants in study abroad through Fairfield are charged regular Fairfield tuition as well as a percentage of housing and meal plans that varies by location and housing selection. Some Fairfield-administered programs have a discounted pricing structure that may include the housing and meals in a single, reduced price. All of your Fairfield scholarships and aid, including federal funds, can be used towards your study abroad expenses for one semester with the exceptions of athletic scholarships, tuition remission, FACHEX, tuition exchange and work-study monies. Students participating in a program in which the fee is less than the corresponding Fairfield University costs (Florence, Italy; Managua, Nicaragua; Galway, Ireland; Dar es Salaam, Tanzania; Aix-en-Provence, France; Campos dos Goyatacazes, Brazil; Brisbane, Australia), will have their financial aid (including merit scholarships, grants, need-based aid, and other forms of financial support) package reduced by a comparable percentage. With the approval of the program director, Modern Language, International Business, and International Studies majors may use Fairfield University financial aid for two semesters abroad.

All students planning international study are strongly encouraged to plan ahead to maximize program opportunities and to ensure optimal match of major, minor, previous language studies and intended destination. Study abroad is intended to build upon and enhance majors and minors. For this reason, program choices will be carefully reviewed to ensure a good fit between academics and destination.

Credits for studying abroad will only be granted for academic work successfully completed at approved international programs. All coursework must receive pre-approval (coordinated through the International Programs Office). Only pre-approved courses, taken at an approved program location, will be transcribed and accepted into a student's curriculum.

Fairfield University administers its own programs in Florence, Italy; Dar es Salaam, Tanzania; Galway, Ireland; Managua, Nicaragua; Aix-en-Provence, France; Brisbane, Australia and Campos, Brazil. All academic course work completed at University-administered programs is considered Fairfield University resident credit, and the grades are calculated into the student's grade point average.

The University also has a variety of affiliated programs throughout the world including Europe, Asia, Africa, and Latin America through other Jesuit universities and organizations such as Council on International Educational Exchange (CIEE), Academic Programs International (API), and School for Field Studies (SFS). Not every program in every location is approved for Fairfield University students; please consult with a study abroad advisor or visit the study abroad website for specifics. In addition to affiliated programs, the University also has numerous exchange offerings in locations such as France, the United Kingdom, the Netherlands, Spain, Argentina, Japan and Brazil. Students participating in affiliated or exchange programs, earn transfer credit (with pre-approval of coursework), meaning that grades earned will not appear on your Fairfield transcripts. Students must earn a C or better for credit to transfer.

In addition, Fairfield faculty members conduct short-term study abroad programs during January intersession, spring break and summer. Prior programs have been conducted in English literature in Ireland, Art History in Florence, Language studies in Russia, Area studies in Nicaragua, and many more. These programs carry credit in various disciplines and can be used for core or major or minor requirements. Short-term programs change each year; please consult with a study abroad advisor or visit the study abroad website for current offerings.

Planning ahead is essential to ensure a successful experience. Because there are opportunities throughout the year and programs for Freshmen through Seniors, there is no time like now to get started on finding the right program. For Freshmen, it's not too early to consider destinations and start planning. Talk with your advisor about study abroad so you can take appropriate courses both here at Fairfield University and your destination. Be sure to attend the Study Abroad Fair in September and meet with a Study Abroad Advisor. For Sophomores: meet with a Study Abroad Advisor to get information about the application process and the steps required before your departure. Learn about your options and discuss them with your academic advisor, faculty, and family. For fall/spring programs in your Junior year: the deadline is February 1. For Juniors: you may study abroad during the fall of your Senior year at Fairfield programs for which grades as well as credits are recorded. Applications are due February 1 of Junior year to go abroad Fall of Senior year. To learn more about all our semester, summer, spring break and intersession programs, consult with a study abroad advisor or visit the study abroad website for the current offerings.

Fairfield is YOUR passport to the world....

We encourage you to consider the many choices Fairfield offers to spend a semester, a year, a month, or just ten days abroad earning academic credit and gaining the kind of knowledge only an international experience can provide.

College of Arts and Sciences

A Message to the Students

Welcome to the College of Arts and Sciences, the oldest and largest of Fairfield's six schools, home to 15 departments and 17 programs, led by more than 160 full-time faculty members. Over half of all Fairfield University students - around 2,000 in any given year - focus their studies in the College. The College is also the home of the Core Curriculum, which unifies the education of all Fairfield undergraduates. Rising from our Jesuit mission and the liberal arts educational tradition, the Core provides the foundations for your professional and personal success, community engagement and global citizenship, imbuing you with the value and habits of lifelong learning and reflective practice.

In the College you will find a rich array of courses and programs in the arts and humanities, the natural sciences and mathematics, the social and behavioral sciences, and interdisciplinary studies, along with expert and caring faculty, all of which will help you pursue your interests and educational objectives. In order to help you make the most of your time here, let me offer the following advice and encouragement.

First, **discover and follow your passions**. Fairfield's curriculum offers you an opportunity to experiment and find out what excites you, what calls to you. Have confidence that if you follow your passions, you will be well prepared for whatever career you choose. However your professional journey unfolds and whatever life choices you make, you will find that you need preparation in many disciplines to solve any problem or reach any goal. Your future will require that you encounter, appreciate, and develop the ability to utilize vastly diverse perspectives and modes of inquiry, and that you can "go global" with your interests, abilities, and aspirations. Using your core courses to explore is the first step in this journey of self-discovery.

Second, **take responsibility for getting what you want from your college experience**. Fairfield University offers a top-quality education and many advantages derived from our beautiful campus, ideal geographical location, and impressive faculty, students, and alumni network. But none of these benefits will come knocking on your door - all require you to be curious and active. Get to know your classmates and professors. Take advantage of peer and faculty advising and mentoring. Get involved with residential learning communities. Seek answers to your questions and support for your needs. Encouragement, assistance, and collaboration from our faculty and staff, as well as your peers await you.

Third, **engage with opportunities outside of the classroom**. Internships, research with faculty, community service and service-learning opportunities, and studying abroad are all occasions to cultivate awareness of the world beyond the classroom, to encounter diverse life experiences, to develop leadership skills, and to connect your formal academic study to other contexts. Your education is not bound by the walls and gates of campus or by the clock marking the beginning and end of class. As you discover the world beyond our campus, I hope you will learn to be guided as much by your compassion for and responsibility to others as you are by your own passions.

Finally, **HAVE FUN!** These are sure to be four of the best years of your life. Four years may seem like a long time, but as the seniors will attest, the years go by very quickly. So don't delay! This is a chance like no other.

I look forward to sharing your journey with you,

Robbin D. Crabtree, Ph.D.

Dean, College of Arts and Sciences

College Of Arts And Sciences 2013-14

Dean: Dr. Robbin Crabtree

Associate Deans: Dr. Manyul Im, Dr. Aaron Perkus, Dr. James Simon

Assistant Deans: Dawn Quintiliani DeBiase, Susan Peterson

Assistant to the Dean: Jean Daniele

The oldest and largest of Fairfield's six schools, the College of Arts and Sciences offers the bachelor of arts and the bachelor of science degree, as well as master's degrees in American studies, communication, creative writing, and mathematics. In recent years, the College has won numerous grants to support new and continuing programs. Examples include funding to enhance the core science curriculum, to broaden access to science education, to add courses in critical languages, to enhance diversity at the University, to bring geographic information systems technology to area high school classrooms, and to promote family literacy. Through various scholarships, grants, and internship programs, students in the College have had the opportunity to study and conduct research in Brazil, China, Nicaragua, Russia, and Tanzania, among other locations.

Students are encouraged to select a major by the end of their freshman year (essential in sciences) but no later than the end of the sophomore year. Pre-major students who are still exploring should consult with their faculty advisor, any of their professors, the Dean of Exploratory Academic Advising, or a career counselor to help them choose a program of study. Selecting a major is not an irrevocable decision; the academic program at Fairfield is flexible enough to allow students to discover new interests or identify new goals. Any of the academic programs in arts and sciences will provide the broad foundations for success and flexibility in any career path.

Within each major field of study, courses range from introductory to highly specialized, with multiple opportunities for independent study and research. Students may also opt, with faculty advice and agreement, to design their own major. Double-majors and minors can also be arranged for students who want to combine the skills and perspectives of two or more disciplines. The core curriculum provides many opportunities to explore the vast territory of the liberal arts and to discover individual intellectual passions.

Degrees Offered

Bachelor of Arts

The bachelor of arts is a liberal arts degree with emphasis in the arts, humanities, or social and behavioral sciences. Major concentrations in the B.A. degree program include American studies, communication, economics, English, history, international studies, modern languages and literatures (French, German, Italian, and Spanish), philosophy, politics, psychology, religious studies, sociology/anthropology, and visual and performing arts (art history; film, television & media arts; music; studio art; and theatre).

Bachelor of Science

The bachelor of science is a liberal arts degree with an emphasis in the sciences. Major concentrations in the B.S. degree program include biochemistry, biology, chemistry, computer science, economics, mathematics, physics, and psychology.

University Honors Program

The College of Arts and Sciences participates in the University Honors Program, an interdisciplinary course of study (23 credits) open to invited freshmen and sophomores and devoted to intellectual history, interdisciplinary studies, and advanced work in the student's major field. A detailed description of the Program can be found in the Honors Program section on page 163.

Specialized Programs in Arts & Sciences

In addition to the traditional major concentrations, the College of Arts and Sciences offers specialized programs and academic services. A partial list follows:

Education: The College of Arts and Sciences, in collaboration with the Graduate School of Education and Allied Professions, offers a 5-year Integrated B.A./M.A. Degree Teacher Certification Program in Secondary, Elementary, and TESOL Education. Secondary education tracks include English, science, math, social studies and world language education. Students earn a BA or BS in their major. They minor in Educational Studies (15 credits) and take 2-4 additional teacher preparation courses as undergraduates, depending on certification area. Students continue teacher preparation as graduate students, completing a 30 credit MA in Secondary, Elementary or TESOL education and eligibility for CT teaching certifications.

Health Professions Program: Fairfield offers a challenging, competitive, and highly successful pre-medical/pre-dental/pre-health professional program. Students in this program pursue studies in a field or major of their personal interest while taking those courses necessary for admission to medical, dental, and veterinary school, as well as any of the professional schools for allied health careers, such as optometry, physical and occupational therapy, and podiatry.

All students who are considering the health professions as a career and were not registered for the program as admitted students should identify themselves and meet with the Health Professions Advisor as early as possible. A great deal of careful planning must be done in order to prepare a strong application for advanced study.

Students who apply to health professions schools need to have foundational knowledge in science. These foundations can be taken within a science major or added to a non-science major. Many pre-medical students elect to pursue a degree in biology that provides well beyond the minimum requirements recommended by the Association of American Medical Colleges for admission to medical school (similar to requirements for other health professions schools). However, students should also recognize that other majors - in the natural sciences and in non-science fields - are acceptable alternatives as long as the major is supplemented by a combination of courses that represent preparation for medical, dental, and allied health schools. The best preparation for medicine and a number of other health professions usually includes early completion of the following basic course sequences: Mathematics 121-122; Biology 170-171; Chemistry 111-112 and 211-212; and Physics 15-16. The choice and sequence of courses depend on the student's personal and academic priorities; these should be discussed with the Health Professions Advisor and other academic advisors.

Internship opportunities are of special interest to students preparing for careers in medicine. Options available to Fairfield students include the Emergency Medicine Research Associates Program at St. Vincent's Medical Center in Bridgeport and a wide variety of local, national, and international opportunities. Contact advisor Geoffrey Church, ext. 2485, for more information.

Pre-Law Program: Fairfield's pre-law program has been consistently successful during the past decade. No particular major is recommended for law school candidates. Pre-law students should elect courses that examine the social, economic, and political systems of which the law is a part. They should also select courses that help them develop competencies to read analytically, reason logically, write clearly, speak precisely, and think critically. Finally, students may wish to pursue coursework that examines the law from the perspective of disciplines such as philosophy, psychology, sociology, and business. The program is closely supervised by faculty who serve as special advisors to pre-law students; supplementary advising is available through the Career Planning Center. Contact advisor Sharlene McEvoy, ext. 2836, for more information.

Minors: In addition to the major, a number of departments and interdisciplinary programs in the college offer optional minor concentrations. These concentrations are developed under faculty supervision within the context of departmental requirements and offerings. For further information, contact the department chair or program director. (The interdisciplinary minors are listed below.)

Interdisciplinary Programs: The Fairfield curriculum includes a number of majors and minors that are interdisciplinary in nature. Such programs permit students to combine coursework from more than one academic department, thereby examining a broad subject from a multiplicity of disciplinary perspectives. There are four interdisciplinary majors currently available to students in the College of Arts and Sciences:

- American Studies
- Biochemistry
- International Studies
- Individually Designed Major
- Professional Studies

The College offers the following interdisciplinary minors:

- American Studies
- Applied Ethics
- Asian Studies
- Black Studies
- Catholic Studies
- Classical Studies
- Educational Studies
- Environmental Studies
- International Studies
- Irish Studies
- Italian Studies
- Judaic Studies
- Latin American and Caribbean Studies
- Peace and Justice Studies
- Russian and East European Studies
- Women, Gender & Sexuality Studies

Descriptions of these interdisciplinary major and minor programs are found, in alphabetical order, among the departmental sections that follow.

Professional Studies: The bachelor of arts or bachelor of science in Professional Studies is a flexible, individualized and interdisciplinary degree designed for non-traditional undergraduates (for example, students returning to college after a long hiatus, working professionals who seek career advancement with a respected university degree, etc.). This major consists of nine courses from at least two areas (humanities, social and behavioral science, mathematics and science, professional studies) as well as a capstone course. The degree offers many attractive features to returning students including a modified core curriculum, more liberal credit transfer policy, and the ability to receive credit through CLEP and portfolio review. More information is available under the Professional Studies program description in the catalog.

Internships: Internships provide the opportunity for practical experience in a career field related to a student's major. Most departments of the College of Arts and Sciences offer credit for internships in appropriate agencies and business firms in Fairfield, nearby communities, as well as in NYC and New Haven. Majors who wish to take advantage of these opportunities should consult their department chair or program internship coordinator about eligibility requirements and other details.

Departmental Requirements and Options

Each department or program in the College of Arts and Sciences has specific academic requirements and options for earning a degree in its academic field. Those requirements and options are found in the departmental and program sections that are presented in alphabetical order on subsequent pages of this catalog.

Additional majors, concentrations, and programs housed in academic departments:

- Anthropology (see Sociology and Anthropology)
- Art History (see Visual and Performing Arts)
- Chinese (see Modern Languages and Literatures)
- Creative Writing (see English)
- Film (see Film, Television, and Media Arts)
- French (see Modern Languages and Literatures)
- German (see Modern Languages and Literatures)
- Greek (see Classical Studies)
- Greek and Roman Studies (see Classical Studies)
- Hebrew (see Modern Languages and Literatures)
- Italian (see Modern Languages and Literatures)
- Japanese (see Modern Languages and Literatures)
- Journalism (see English)
- Latin (see Classical Studies)
- Marine Science (see Biology)
- Molecular Biology (see Biology)
- Film, Television and Media Arts (see Visual and Performing Arts)
- Music (see Visual and Performing Arts)
- Professional Writing (see English)
- Russian (see Modern Languages and Literatures)
- Spanish (see Modern Languages and Literatures)
- Studio Art (see Visual and Performing Arts)
- Television (see Film, Television, and Media Arts)
- Theatre (see Visual and Performing Arts)

The American Studies Program provides students with an interdisciplinary curriculum devoted to the examination of American civilization - its culture, institutions, intellectual tradition, and the relationships of its people - making possible a unified, comprehensive approach to American life and thought. Besides the topical unity implicit in this course of study, students discover the methodological differences that characterize the traditional scholarly disciplines as they deal with the infinite complexities of the American experience.

Requirements

For a 30-credit major in American studies, students complete the following:

1. Twelve credits in a discipline concentration in visual and performing arts arts, history, English, politics, or sociology;
2. Twelve credits selected from American-oriented courses in at least three disciplines that differ from the chosen discipline concentration;
3. Three credits in AS 201, The American Intellectual Tradition, taken during junior year; and
4. Three credits in a research/theme course, AS 300, taken during senior year.

For a 15-credit minor in American studies, students complete the following:

1. AS 201 The American Intellectual Tradition (three credits);
2. Three American studies elective courses in one of the following disciplines: English, history, politics, sociology, or visual and performing arts (nine credits); and
3. One American studies elective course outside the concentration (three credits).

Fairfield University also offers a master of arts degree in American Studies. The 400-level core and elective courses in that program are available to qualified senior undergraduate American studies majors and minors with the approval of the program director.

Note: Departmental course descriptions may be found in the appropriate departmental sections of this catalog.

Course Descriptions

AS 201 The American Intellectual Tradition

A seminar on major ideas and themes that have helped shape American life, this course makes a conscious effort to demonstrate the interaction between intellectual, social, and cultural dynamics in the formation of America. Three credits.

AS 300 Independent Research Project

During senior year, each American studies major writes a research paper under the supervision of several participating faculty members. Students integrate different intellectual disciplines in the design and execution of their projects. Three credits.

AS 361 The American Civil War: Myth and Reality

This course exposes students to an interdisciplinary method of learning. While using standard historical texts to establish the facts regarding the American Civil War, this course explores the sometimes confusing and contradictory versions of the Civil War as depicted in literature, photography, feature films, documentary films, music, painting, and other modes of expression. Three credits.

AS 383 America in the 1930s: Decade of Change

The Great Depression represents the catalytic agent in America's extraordinary transformation in the 1930s, a decade during which the changes in the economic and political sectors provided the matter for American cultural life. This course acquaints students with the complexities of this pivotal period in American life through feature films and documentaries, popular and serious fiction, the American theatre of the time, popular music, public and private art, and mass circulation and little magazines, while introducing them to an interdisciplinary methodology. Three credits.

AS 389 Literature and Religion: The American Experience

This course surveys the relationship of literature to religion in the history of American letters. Beginning with the moral didacticism of early Puritan literature, American writers have manifested a persistent concern with religio-ethical matters as well as with the impact of religious institutions in shaping our social and cultural environment. Using literary texts by major American writers, the course evaluates the critical perspective and relevance of the imaginative writer's treatment of religious questions. Three credits.

Established in 1980 by a grant from the National Endowment for the Humanities, the Program in Applied Ethics is an interschool program reporting to the Senior Vice President for Academic Affairs. It operates in close coordination with the deans of the College of Arts and Sciences, the Charles F. Dolan School of Business, the School of Nursing, and the School of Engineering.

The Program integrates interdisciplinary courses, seminars, lectures, colloquia, and workshops in the fields of professional ethics (business, healthcare, science, law, engineering, education, and communication), ethics for the citizen (government, community, environmental concerns, war and peace), and global studies (ethical dimensions of global violence, global health, environmental policies, business practices, and humanitarian action). This unified approach to the theory and practice of ethical conduct in all fields raises student awareness of the moral dilemmas of their chosen fields of practice, of allied fields, and of society and the world. The Program offers a series of core-level and elective courses and seminars in service to various academic and professional programs, and a 15-credit minor.

Requirements

For a 15-credit minor in applied ethics, students complete the following:

- A philosophy course that emphasizes ethics, a religious studies course that emphasizes moral theology, and one intermediate (200-level or greater) course in applied ethics as part of their Area III core credits
- Six to nine credits in intermediate applied ethics courses (AE 262 through AE 299)
- Six to nine credits in advanced applied ethics seminars (AE 391 through AE 398). AE 384 and AE 399 (independent study) will also satisfy this requirement.

Note: Substitutions are possible as approved by the program director.

Prerequisites

Applied ethics courses are normally taken to fulfill the fifth core requirement in Area III: philosophy, religious studies, and applied ethics. Students must complete one course in philosophy or one course in religious studies before enrolling in any 200-level applied ethics course and two courses in either philosophy or religious studies (two in either or one in each) before enrolling in any 300-level applied ethics seminar.

The Patrick J. Waide Jr. Fund

In 2002, Patrick J. Waide Jr., a former University trustee and distinguished alumnus of Fairfield University (class of 1959), generously established a continuing fund to spend on invited speakers, course materials, and scheduled activities on topics of international affairs, global ethics, and public policy. The first major disbursement established the Resource Center for Global Studies, located in the central office of the Program on Applied Ethics and open to the University community during working hours.

Course Descriptions

AE 262 Ethics and the Community

The course surveys the philosophical grounding of the organizations in contemporary society, examining structured human groups from the household, through the village (or religious/ethnic association), to the nation-state to understand their moral undertakings in their environment; to consider how they implement and balance rights and duties, rules and compassion, autonomy and common purposes. This course gives special attention to structural injustice in the treatment of those marginalized by gender, race, or socioeconomic deficit, and includes an effort to determine where new understanding may yield suggestions for structural modification. Students are provided the opportunity to research and present projects on contemporary social problems that illustrate the themes of the course. This course meets the U.S. Diversity requirement. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 265 Ethics in Education

This survey of the ethical issues that arise in the classroom, school, and school district also covers those issues, to a lesser extent, in the educational policies of the state and federal government. The course directly addresses issues of race, class, and gender in the educational system, addressing entitlement to education, access to education, discipline in the educational setting, multicultural issues in general, politics, accountability, assessment, and the ethics of respect as they pertain to teachers, students, and administrators. This course meets the U.S. diversity requirement. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 270 Ethical Dimensions of Global Violence

A survey of the ethical implications of the new and alarming potentials for violence in a disorderly world. The new faces of violence - insurgency, terrorism inspired by religion, plans for mass destruction, children as warriors - will be examined in the context of Just War theory, the Christian commitment to social justice, and the emerging international order (and disorder). Fully half the course will explore the perspectives of the developing world, especially as violence occurs between factions from the developing world and the traditional wielders of force in the North and West. This course meets the world diversity requirement. (Prerequisite: one course in philosophy or in religious studies) Three credits.

AE 271 The Sacred Balance

This course examines contemporary perspectives and diverse cultural worldviews demonstrating a reciprocal relationship between humanity and the natural world. This approach analyzes the ways established and new fields in the sciences can reunite knowledge of the world with a sense of the sacred. Extending into the realm of meaning and value, scientific as well as spiritual perspectives jointly address the ecological challenges confronting contemporary society and the evolution of human consciousness. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 275 Ethics and the Global Environment

A survey of environmental issues on the global scale, exploring ethical and economic dilemmas of liberty and law, justice and welfare, conflicts of cultures, race, and gender, as they arise in the increasing interaction of developed and developing nations. The course focuses on the role of science - with special reference to scientific uncertainty - in the articulation of issues like global warming, the depletion of the ozone layer, and species extinction. The ethical dilemmas and environmental implications of the work of multinational corporations are examined through case studies and group discussion; term projects focus on selected areas and industries. This course meets the world diversity requirement. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 276 Ethical Dimensions of Global Business Practices

A survey of the ethical dimensions of contemporary business practice generally, with special emphasis on the ethical implications of global business enterprise. Topics include global employment practices, human and employee rights in a global economy, the implications of external debt for the economies of developing nations, the human costs and benefits of the changes in global agriculture and food provision generally, and the work of international agencies (the World Trade Organization, the International Monetary Fund, and the World Bank in particular) in guiding the economies of the world. A three-week unit will focus on the economic implications of natural and man made disasters and humanitarian crises. This course meets the world diversity requirement. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 281 Ethics of Communications

This course examines the moral dilemmas of media management, political propaganda, campaign promotions, public relations, and corporate communication. Topics include advertising and marketing practices, especially political advocacy and messages targeted to various audiences; truth and loyalty in public relations practices; the philosophical and constitutional bases of freedom of the press; and problems of media bias, systematic and otherwise. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 282 Ethics and Computers

This course examines the legal and ethical dilemmas spawned by the proliferation of Internet-based technologies in an increasingly complex society. Topics include the philosophical foundations of the right of privacy; the centralization of power; the impact on employment, computer crime, patents, property, and liability; the tremendous power of instantaneous Internet communications to influence world events; and the possibilities and implications of artificial intelligence. Central consideration is given to the digital divide: the potential for global injustice in global discordances between rich and poor societies in access to the Internet and other advanced technology. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 283 Environmental Justice

This course offers a comprehensive study of the political impact of our global environmental crisis examined through the lens of the relationship of self to society. We study current scientific, religious, economic, and political perspectives that impact our ecological reality globally, including health, trade, population, and waste issues. Working in self-selected groups, students have the opportunity to report on alternative models and activists' movements aimed at creating a global sustainable future. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 284 Environmental Ethics

Students examine the environmental problems that arise in our attempts to reconcile the demands of human fulfillment and economic activity, and the requirements of ecological balance. Issues include the diverse perspectives of conservation, preservation, and deep ecology. Student projects cover the wise use of resources; pollution of land, air, and water; conservation of species and open space; global climatic change; and the future stewardship of oceans, forests, and the atmosphere. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 285 Ethics of Healthcare

This course considers the moral dilemmas of the healthcare setting. Topics include patients' rights (medical paternalism and patient autonomy, informed consent to therapy, and participation in research); dilemmas of reproduction (technological assistance, abortion, cloning); dilemmas of life and death (assisted suicide, euthanasia, technological interventions for the dying); allocation of healthcare resources; and the special dilemmas of healthcare professionals caught in binds between HMO contracts and professional obligations. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 286 Ethics of Research and Technology

This course explores the moral dilemmas that attend the search for an application of scientific knowledge. Topics include the methods of science and their limits (e.g., in research with human subjects); scientific fraud, its dimensions and prevention; and the effects of rapidly expanding fields of technology on medicine and industry. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 287 Engineering Ethics

This course systematically explores the ethical dimensions of situations and tasks common to engineering practice. Issues include professionalism, codes of ethics, consumer risk and safety, employee loyalty and whistle-blowing, research and ownership of information, and the engineer's responsibility to the natural environment. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 288 Ethical Dimensions of Global Humanitarian Policy

This course surveys the ethical dilemmas that arise in the context of global need and global opportunity, specifically the needs of physical, psychological, and spiritual sustenance and support created in the developing world by many kinds of violence, exploitation, and environmental crises, and the opportunities perceived in the developed world to provide assistance through international, governmental, and non-governmental avenues. Topics include the ethical analyses of emerging crises and assessments of needs; the typical structures of assistance, public and private, and the consequences (intended or otherwise) of deploying them; and the dilemmas of seeking and assessing help from donors of uncertain motives and histories. This course meets the world diversity requirement. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 289 Global Health Care Policy

This survey of issues of public health on a global scale explores the ethical and economic dilemmas of environmental degradation, national sovereignty, individual liberty, and human happiness and productivity as they arise in the increasing interaction of developed and developing nations. The course studies conditions prevalent in developing nations - poverty, hunger, the absence of physical and social infrastructure, and uneven education, as well as the role of gender and race discrimination - and examines ethical dilemmas confronted in the efforts to deal with health conditions in the developing nations, through case studies and group discussion; term projects focus on selected regions and health conditions. This course meets the world diversity requirement. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 290 Ethics in America: The Telecourse

This course is a survey of practical ethics, in which televised discussions of selected topics in applied ethics (ethics in government, ethics in the military, medical ethics, business ethics, etc.) illustrate the basic concepts of the Western tradition in ethical reasoning (autonomy, justice, privacy, community, etc.). The discussions feature influential public figures in each field; readings include important writings in the history of ethics. Format: lecture/discussion with in-class video presentations. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 291 Business Ethics

This course investigates ethical problems in business practice. Topics include the foundation of the free-market system, personal morality in profit-oriented enterprises; codes of ethics, obligations to employees and other stakeholders; truth in advertising, whistle-blowing, and company loyalty; self and government regulation; the logic and future of capitalism; and the changing responsibilities of the manager in a rapidly globalizing business environment. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 293 Ethics of War and Peace

This is a survey of issues relating to war and international conflict. Topics include Just War theory, human rights issues, the impact of war on women, the role of the United Nations Security Council, and the history of global attempts to proscribe and prevent aggression. The course also looks at related issues that have emerged in recent years, such as humanitarian intervention and economic sanctions. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 294 Ethics of Media and Politics

This course explores the ethical dimensions of the complex relationship between the media and the political process. The media is the only industry protected by the Bill of Rights, and for good reason: it is critical for a democracy to have well-informed citizens. The course looks at the responsibility of the media, and the difficulties of fulfillment in a capitalist society. Who needs to be informed? What is the role of the government in providing information? Students learn ethics from informed discussions, study, and writing on the cases presented. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 295 Ethics in Law and Society

This course is an inquiry into the ethical dilemmas of making, enforcing, adjudicating, obeying and practicing the law. Topics include the nature of law and the province of jurisprudence, responsibility of the criminal bar (defense, prosecution, judicial), conflicts of interest, election or appointment of judges, the moral infrastructure of the Constitution, the limits of adjudication, and issues relating to investigative technique (torture and extreme confinement conditions). (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 296 Ethics in Government

This course examines the moral dilemmas pertaining to governing and being governed. Topics include the ethical dimensions of making public policy; civil rights and civil liberties; the "establishment of justice" with regard to minorities, women, immigrants, and those politically at risk; corruption in government; war, peace, revolution, and the moral principles that govern them; terrorism and the defense against terrorism; preservation of the environment; and the nature and limits of representative government. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 297 Eco-feminism

This course explores the historically strong association between women and nature, in which the image of Mother Earth is central, and critiques the power-as-domination assumption of our culture shown in the exploitation of women and of the earth. Students examine religious, psychological, social, historical, and scientific manifestations of this assumption, along with alternative models of power and responsibility. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 298 Ethics and Feminist Perspectives

This course offers a philosophical inquiry into the implications of traditional ethical theory and social institutions from perspectives developed in contemporary feminist literature. Examined through the lens of race, class, and gender, specific areas include family, health, work, and media issues. The course explores the psychological and ethical dimensions of social and family oppression, environmental racism, medical paternalism, economic imperialism, and patriarchal structures in the major religious traditions. (Prerequisite: one course in philosophy or religious studies) Three credits.

AE 299 Special Topics in Applied Ethics

The course is an opportunity for the student to carry out a major project in Applied Ethics involving work in the community, derived from a previous AE course. Three credits.

AE 384 Reflections on the Environment: Focus on Latin America and the Caribbean

This seminar examines environmental, ethical, and socio-economic issues of Latin America and the Caribbean. It integrates the hard sciences (biology, chemistry, physics, and physical geography), the social sciences (sociology, politics, economics, and business), and the humanities (history, ethics, theology, and literature). The capstone experience provides students with an overview of multiple perspectives on the environment of Latin America and the Caribbean with a focus on some specific countries and issues. Students conduct independent research projects that demonstrate their mastery of at least one component of each disciplinary group. This seminar counts for the capstone requirement for the minor in Applied Ethics and the minor in Latin American and Caribbean Studies. This course meets the world diversity requirement. (Prerequisites: two courses in philosophy or religious studies) Three credits.

AE 391/BU 391 Seminar in Business Law, Regulation, and Ethics

This seminar investigates ethical dilemmas of business management, primarily as encountered in real cases. Themes vary from year to year. Format: guest presentations by members of the business community, followed by discussion. (Prerequisites: two courses in philosophy or religious studies) Three credits.

AE 393 Seminar in War, Peace, and Public Policy

This seminar examines the philosophical, political, and religious aspects of war and peace. Topics include the origin and development of just war theory, the pacifist tradition, revolution, guerrilla warfare, and military preparedness. The course focuses on the increased complexity of these issues in the 20th century and especially in the nuclear age. Format: discussion. (Prerequisites: two courses in philosophy or religious studies) Three credits.

AE 395 Seminar in Legal Ethics

This seminar examines the peculiar ethical dilemmas confronting lawyers: confidentiality, protection of the guilty, roles in public policy, conflict of interest, and, in general, responsibility for the functioning of the adversary system. Format: discussion. (Prerequisites: two courses in philosophy or religious studies) Three credits.

AE 396 Seminar in Ethics and Government

This seminar examines the dilemmas of lawmaking and governing: principles, tradeoffs, and compromises; dirty hands and the relationship between government and the individual; international politics; presidential secrecy; covert action; and political trust. Format: discussion. (Prerequisites: two courses in philosophy or religious studies) Three credits.

AE 397 Seminar in Bioethics I: Ethical Issues in Health Care Practice

This seminar presents an intensive study of select problems in the ethics of medicine and healthcare practice, including abortion; euthanasia; prenatal diagnosis; reproductive engineering and surrogate motherhood; and treatment decisions for very ill newborns. Format: student and guest presentations. This course meets the U.S. diversity requirement. (Prerequisites: two courses in philosophy or religious studies) Three credits.

AE 398 Seminar in Bioethics II: Ethical Issues in Biomedical Research and Resource Allocation

This seminar offers an intensive study of select problems in the ethics, law, and public policy surrounding healthcare, especially in the United States. Topics include research with human subjects, the professional/patient relationship, allocation of scarce resources, and cost containment. Format: student and guest presentations. (Prerequisites: two courses in philosophy or religious studies) Three credits.

AE 399 Special Topics in Applied Ethics

Students undertake an advanced program of course, field, and library work arranged with the instructor. Proposals for special topics must be approved by the director and the dean of the student's school. Ordinarily three credits, although special arrangements are possible.

Program in Asian Studies

Faculty

Director

Xiao (Modern Languages and Literatures)

Program Faculty

Aksan (Economics)

Buss (Economics), Emeritus

Davidson (Religious Studies)

Franceschi (Economics)

Im (Philosophy)

Li (History)

LoMonaco (Visual and Performing Arts)

Rajan (English)

Schwab (Visual and Performing Arts)

Zhang (Communication)

The Asian Studies program focuses on a region that is home to fully half of humanity, the world's most populous democracy, and one of the fastest growing economies in the world. The importance of Asia in global, political, and economic systems - and particularly its growing impact on the United States - demands a firm understanding of the history, cultures, politics, religions, and economics of Asian countries. Everyone, regardless of major or profession, will be affected by past, present, and future events and developments in Asia.

Combined with a major in a regular discipline, the Asian studies minor prepares the student for a career in international business or banking, journalism, teaching, the United States government, or in international organizations, or for further studies in graduate or professional school.

It is also possible, instead of pursuing the minor, for a student with at least a 3.0 GPA to create an Individually Designed Major in Asian Studies, Chinese Studies, or some other relevant focus in Asia-related study. For information, please consult the Individually Designed Major catalog section.

Requirements

For an 18-credit minor in Asian studies, students complete the following:

- AN 310 Asian Studies Seminar during the junior or senior year. AN 301 Independent Study may be substituted if the seminar is not offered or if program faculty approve a student proposal for independent study in lieu of the seminar.
- One course from CI 250, CI 251, CI 252, or a course from English, Philosophy, Religious Studies, or Visual and Performing Arts from the course offerings listed below; AND one course in Communication, Economics, History, or Politics from the course offerings listed below.
- Any three other courses from those listed below. Language courses may count for all three only if they are all courses in the same language.

Study abroad in Asia is not required for this minor, but is strongly recommended. Some courses taken abroad may be counted toward the minor with the Asian Studies Director's approval.

Course Offerings

Asian Studies

AN 301 Independent Study

AN 310 Asian Studies Seminar

Communication

CO 241 Communication and Culture: East and West

Economics

EC 120 Environmental Economics

EC 230 Comparative Economic Systems: Asian Economies

EC 235 Economic Development of Third World Nations

History

HI 279 China to the 1800s
 HI 285 Modern China: 1800 to Present
 HI 286 Rise of Modern Japan: 1800 to Present
 HI 366 Gender, Culture, and Representation: Women in China and Japan, 1600 to Present
 HI 367 East Asia in 20th-Century American Wars

Modern Languages and Literatures

CI 110-111 Elementary Chinese
 CI 210-211 Intermediate Chinese
 CI 220 Advanced Chinese
 CI 250/EN 118 Modern China Through Fiction and Film
 CI 251 New Chinese Cinema
 CI 252/EN 119 The City and Modern China
 JA 110-111 Elementary Japanese
 JA 210-211 Intermediate Japanese

Philosophy

PH 240 Introduction to Asian Philosophies
 PH 241 Confucianism
 PH 242 Philosophical Daoism and Zen Buddhism

Politics

PO 145 Asian Politics

Religious Studies

RS 101 Exploring Religion: Asian Religions
 RS 280 Hinduism
 RS 285 Buddhism
 RS 287 Buddhist Thought in India
 RS 289 Tantrism
 RS 388 Buddhist Spirituality

Visual and Performing Arts

AH 12 Introduction to the Art History of Asia, Africa, and the Americas (by petition and pre-approval only)
 AH 100 Arts of India, China, and Japan
 TA 122 Asian Theatre

Course Descriptions

AN 301 Independent Study

Students undertake an individualized program of study in consultation with a director from the Asian studies faculty. Three credits.

AN 310 Asian Studies Seminar

This seminar examines selected topics concerning Asia. Students register for AN 310, but the course is taught in conjunction with another 100-300 level courses from a rotation of the course offerings listed above. Consult the Asian Studies director to identify the conjoined course for a given semester. The seminar concentrates on topics within the parameters of the conjoined course syllabus but adds research emphasis. Students registered for AN 310 must complete a research project, to include 300-level research in addition to the regular research requirements of the conjoined course, and a 25-50 page term paper in substitution of some portion of the conjoined course requirements, as determined by the instructor. For juniors and seniors only. Three credits.

Zavras

Lecturers

L. Biardi
Collins-Praino
DeCristofaro
Stewart

The biology major prepares students for future professional work in the life and health sciences or advanced education in numerous specializations across all fields of Biology. In addition to a high success rate in placing graduates in medical school, physicians assistant programs, dental school and other health care professions, a significant number of our students also pursue graduate degrees (both Masters and PhD programs) in fields such as microbiology, physiology, cell biology and ecology. Many other students have been successful in careers in the pharmaceutical industry, and also, importantly, as teachers in primary and secondary education programs.

Requirements

For a 129-credit to 141-credit major in biology, students complete the following:

Year One

BI 170-171 General Biology I and II	8 credits
CH 111-112 General Chemistry I and II	8 credits
MA 119 Applied Calculus I or MA 171 Calculus I	3-4 credits
MA 120 Applied Calculus II or MA 172 Calculus II*	3-4 credits
Core curriculum courses	12 credits
Subtotal:	34 to 36 credits

Year Two

BI 172 General Biology III	4 credits
CH 211-212 Organic Chemistry I and II	8 credits
PS 15-16 General Physics I and II**	8 credits
Biology block elective (see below)	3-4 credits
Core curriculum courses	12 credits
Subtotal:	35 to 36 credits

Year Three***

Biology block elective (see below)	6 to 8 credits
Biology electives***	6 to 8 credits
General electives	6 to 8 credits
Core curriculum courses	12 credits
Subtotal:	30 to 36 credits

Year Four***

Biology electives****	3 to 4 credits
Biology capstone elective	3 credits
General electives	12 to 16 credits
Core curriculum courses	12 credits
Subtotal:	30 to 35 credits

Alternatively, MA 217 Accelerated Statistics may be substituted for the second math requirement. **Physics may be taken in second or third year. *The sequence for biology block electives, biology electives, and capstone elective shown here are only suggestions. You may arrange them differently. ****Various upper-level courses may be double-counted toward the departmental concentrations in molecular biology or marine science.*

Biology Block Electives and Additional Requirements

During the sophomore (second semester) through senior years of the degree, a minimum of six biology courses and a capstone experience (described below) are required. To ensure breadth of exposure, at least one course must be taken from each of the following three blocks. The three remaining biology course electives may be any 200- or 300-level courses from the blocks listed below. Four of the six courses taken during the sophomore (second semester) through senior years must include a laboratory component.

Molecular, Cell, and Developmental Biology Block (8 courses)

BI 261 Genetics
 BI 327 Cell Biology
 BI 342 Developmental Biology
 BI 352 Fundamentals of Microbiology
 BI 354 Molecular Biology
 BI 357 General Virology
 BI 358 Recombinant DNA Technology
 BI 381 Special Topics Seminar

Biochemistry and Physiology Block (10 courses)

BI 107-108 Human Anatomy and Physiology*
 BI 262 Human Physiology
 BI 313 Comparative Physiology
 BI 314 Endocrinology
 BI 315 Anatomy: Form & Function
 BI 324 Biochemistry I
 BI 325 Biochemistry II
 BI 356 Immunology
 BI 369 Plant Biology: Morphology, Biochemistry, and Physiology
 BI 382 Special Topics Seminar

Ecology, Evolution, and Environmental Science Block (11 courses)

BI 260 Ecology
BI 318 Vertebrate Zoology
BI 319 Zoology Field Experience
BI 321 Animal Behavior
BI 362 Marine Invertebrate Zoology
BI 364 Freshwater Ecology
BI 365 Evolutionary Biology
BI 366 Ornithology
BI 368 Plant Biology: Evolution, Diversity, and Environment
BI 372 Environmental Toxicology
BI 375 Biochemical Ecology
BI 383 Special Topics Seminar

* BI 107 and BI 108 may be taken by students pursuing allied health programs, where this course is required. Taking both semesters will count as one Biochemistry and Physiology block upper-level elective with lab. Permission of the department chair is required.

See NOTE under course description.

The choice of block electives, advanced biology electives, and general electives inside or outside the department varies according to a student's career objective and interest. Students make their choices after consultation with appropriate department advisors. Students interested in molecular biology may, for example, take advanced courses to fulfill a concentration in molecular biology.

Students interested in graduate, medical, dental, or allied health schools may select electives that meet the requirements for admission to graduate or professional schools. Students interested in science writing or teaching in biology may choose to earn minors in English or education.

Faculty research specializations provide opportunities for qualified students to participate in laboratory research or library investigations in their chosen interest areas under a professor's guidance. Internships at off-campus institutions can also be arranged for qualified students. These opportunities expand and enhance the biology program's numerous possibilities for individualization.

The Capstone Experience

During their capstone experience, students connect the diverse experience and knowledge they have acquired as biology majors, focusing these skills on examining in depth, a specific topic. In a small class setting (10-12 students maximum), students and the professor delve deeply into the chosen topic, assessing the peer-reviewed literature and most current trends around the particular subject. Students bring their breadth of knowledge to the discussion, and apply what they have learned over the course of their academic training to critically analyze the arguments and experiments presented in the literature. In most cases, students will be responsible for presenting a paper to the class, driving the content of discussion and debate with their fellow students and instructor. The capstone is a reading extensive experience, and, by definition, shows that the biology major is able to synthesize and apply their knowledge to examine interesting questions.

To maximize the value of the capstone experience, students enroll in an upper-level seminar course (BI 381, BI 382, or BI 383) during their junior or senior year. See course descriptions for topics.

Research and Internship Experience

Students intending to continue their studies in graduate school should consider participating in two or more terms of research. All on-campus research experiences require prior approval from a student's faculty research advisor. Off-campus research or internship experiences require an on-campus faculty mentor and approval from the department chair or internship director. Prior consultation is required to assure that the particular activity is suitable.

Research and internship experiences are extra courses and do not count towards the biology major degree requirements.

Biology Major with a Concentration in Molecular Biology

In addition to the requirements noted above, students take four courses from the molecular, cell, and developmental biology block. BI 324 Biochemistry I, BI 325 Biochemistry II, and BI 356 Immunology may also be accepted. Interested students should consult with Dr. Phyllis Braun for advisement and completion of appropriate paperwork.

Biology Major with a Concentration in Marine Science

In addition to the requirements noted above, students take four courses from the marine sciences. Interested students should consult with Dr. Diane Brousseau for advisement and completion of appropriate paperwork.

BI 78 Introduction to Marine Science

BI 362 Marine Invertebrate Zoology

BI 383 Ecology Block Seminar

- Principles of Aquaculture
- Coral Reef Ecology
- Ecology of the North Atlantic Coast

BI 391-394 Biology Research

BI 397-398 Biology Internship

Biology Major with a Minor in Educational Studies and the 5-year Teacher Education Program

Biology majors who elect a minor in Educational Studies and who have been admitted to the 5-year Integrated Bachelors-Masters Degree and Teacher Certification program should consult with Dr. Olivia Harriott, education advisor and Dr. Patricia Calderwood, director of the 5-year certificate program to insure that appropriate thought and reflection on their choices for upper division biology curriculum be made in assuring the best outcome for this unique 5-year program.

Minor in Biology

For an 18-20-credit minor in biology, students complete the following:

- BI 170, 171, and 172 General Biology (12 credits); and
- any two biology courses numbered 200 or greater from the biology block electives.

Double counting is not allowed.

Please note many upper level biology courses require 4 semesters of Chemistry as prerequisites.

Course Descriptions

BI 15 Fundamentals of Biology I

This course, an introductory study of biology for the non-science major, familiarizes students with the general biological principles that govern the activities of all living systems. Concepts include the biochemical origin of life, cellular morphology and physiology, and human genetics. Note: This course counts as a science core course but does not satisfy requirements for the biology major or minor. Three lectures. Three credits.

BI 16 Fundamentals of Biology II

Students examine biological systems, such as the human organism, in detail, with an emphasis on pathophysiology, diversity of life, and evolution. Emphasis varies by instructor. Note: This course counts as a science core course but does not satisfy requirements for the biology major or minor. Three lectures. Three credits.

BI 18 Human Biology: Form and Function

This course, which provides a basic introduction to human anatomy and physiology, examines the major organ systems of the body, focusing on how each system functions and how all systems interact with one another. Genetics, disease and prevention, nutrition, current issues in public health, and environmental health problems that human populations face are discussed. Note: This course counts as a science core course but does not satisfy requirements for the biology major or minor. Three lectures. Three credits.

BI 70 Science, Technology, and Society

This course analyzes the major science and technology issues that confront today's society. Through an examination of the underlying science, students gain an understanding of the impact these issues hold for the environment, our natural resources, and our society, including benefit versus hazard expectations. Course issues, which change to incorporate timely topics, include acid rain; agriculture; diseases such as AIDS, cancer, and heart disease; energy; genetic engineering; the greenhouse effect; ozone depletion; and water pollution. Note: This course counts as a science core course but does not satisfy requirements for the biology major or minor. Three lectures. Three credits.

BI 71 Identity and the Human Genome

This course introduces scientific and social aspects of human genetics to the non-science major. Topics of discussion include the structure and function of genes, human genetic diversity, Mendelian inheritance, and the ethical and legal issues related to emerging genetic technologies. Note: This course counts as a science core but does not satisfy requirements for the biology major or minor. Three lectures. Three credits.

BI 74 Biology of Food

This course will introduce non-science majors to the biological processes behind the food that we produce and harvest as well as the environmental consequences of our diet choices. This course will include material on: the rise of agriculture, plant and animal growth requirements and life cycles, evolution, and a description and discussion of food organisms in the modern North American diet, techniques of food production and effects on the environment. Note: This course serves as a natural science elective in the Program on the Environment. This course counts as a science core course but does not satisfy requirements for the biology major or minor. Three lectures. Three credits.

BI 75 Ecology and Society

This course focuses on environmental issues raised by modern society's conflicting needs for land, water, a livable environment, and renewable/non-renewable resources. Students examine the available scientific evidence and are encouraged to draw their own conclusions concerning these environmentally sensitive issues, which are presented in lectures, readings, films, and occasional, off-campus field trips (by arrangement). This course is open to all except biology majors. Note: This course serves as a natural science elective in the Program on the Environment. This course counts as a science core course but does not satisfy requirements for the biology major or minor. Three lectures. Three credits.

BI/CH 76 Environmental Science

The science of the environment is presented through examination of the interconnections among physical, chemical, and biological fields of inquiry. This course looks at how the global environment is altered by the human population, technology, and production of fuels and food. In this course, students will acquire a scientific understanding of current issues in environmental science and learn to evaluate claims about current environmental problems. Note: This course serves as a natural science elective in the Program on the Environment. This course counts as a science core course but does not satisfy requirements for the biology or chemistry major or minor. Three lectures. Three credits.

BI 78 Introduction to Marine Science

This course introduces the non-science major and the marine science minor to the field of oceanography. Topics dealing with the geological, physical, chemical, and biological aspects of science underscore the interdisciplinary nature of world ocean study. Note: This course serves as a natural science elective in the Program on the Environment. This course counts as a science core course but does not satisfy requirements for the biology major or minor. Three lectures. Three credits.

BI 79 Latin American Ecosystems

This course introduces the non-science major to ecosystems representative of Central and South America. The course emphasizes the importance of biological diversity and natural products, and analyzes solutions for saving ecosystems in peril. This course may include a visit to Latin American countries for first hand exposure to the ecosystems studied. Note: This course serves as a natural science elective in the Program on the Environment and Latin American and Caribbean Studies. This course counts as a science core course but does not satisfy requirements for the biology major or minor. Three lectures. Three credits.

BI 87 Microbes and Your Health

This course surveys the interactions of microorganisms on humans that result in various types of diseases. The course emphasizes bacterial and viral infections that involve the various organs associated with skin, respiratory, digestive, urogenital, nervous, and lymphatic systems. It also addresses the importance of infection control and prevention, the control of growth, and the functional anatomy of microorganisms, and provides a historical perspective on the various diseases surveyed. Note: This course counts as a science core course but does not satisfy requirements for the biology major or minor. Three lectures. Three credits.

BI 95/ PH 230 Philosophy and Biology of Evolutionary Theory

This course explores the question of evolutionary theory from the perspectives of philosophy and biology. From the biological perspective, the course focuses on genetics, adaptive evolution, neutral evolution, the genetic impact of selection on populations, the origin and maintenance of genetic variation, the importance of development in evolution, and the expression of variation. From the philosophical perspective, the course focuses on evolution as theory and ideology, the critique of the adaptationist program, evolution and contingency, typological versus population thinking, and the developmental systems critique. Note: This course counts as a science core course but does not satisfy requirements for the biology major or minor. Three lectures. Three credits.

BI 96 God and Modern Biology

This course introduces students to the dialogue between science and religion with a detailed consideration of recent advances in modern biological research that raise significant religious, theological, and ethical issues. The course emphasizes developing a practical understanding of the scientific method through interactive experiences and lecture material. Students consider how scientific breakthroughs and ideas can influence or be influenced by religious thought through assigned readings and in-class discussion groups and through the historically significant and most recent findings in the areas of evolution, biotechnology, and the neurosciences. Note: This course counts as a science core course but does not satisfy requirements for the biology major or minor. Three lectures. Three credits.

BI 107/108 Human Anatomy and Physiology

This course is required for nursing majors as a pre-requisite for most nursing courses. A strong chemistry background is recommended. Homeostasis is the major theme of the course with form and function covered together each semester. BI 107 introduces the student to anatomical terminology, homeostasis and feedback control, membrane physiology, and tissues followed by the integumentary, skeletal, muscular and nervous systems. BI 108 continues with the endocrine, cardiovascular, lymphatic, respiratory, urinary, digestive and reproductive systems. Laboratory work closely follows the lecture and includes microscopic anatomy (histology), use of anatomical models, Human skeletons and dissections for study of gross anatomy, and physiology experiments including muscle recruitment measurements, cranial nerve tests, blood pressure measurements, blood typing, etc. Note: This course is not open to biology majors except where required for allied health sciences (chair approval required). Three lectures, one lab. Four credits each semester.

BI 151 Elements of Microbiology

This microbiology course for nursing majors examines the structure and function of bacteria, viruses, yeasts, molds, antibiotics, and bacterial genetics as well as the mechanisms of microbial invasion and the body's immunological response. Note: This course is not open to biology majors. Three lectures, one lab. (Prerequisites: BI 107, CH 84) Four credits.

BI 170 General Biology I (Majors)

This introductory course for biology majors covers the molecular and cellular basis of life, including cell structure and function, cell communication, inheritance, gene expression and regulation, and developmental genetics. Students receive hands-on experience with a broad range of topics and techniques in the accompanying laboratory. Three lectures, one lab. Four credits.

BI 171 General Biology II (Majors)

This introductory course for biology majors covers biochemistry, energy utilization, anatomy and physiology, and the structure and function of plants and animals. Students receive hands-on experience with a broad range of topics and techniques in the accompanying laboratory. Three lectures, one lab. Four credits.

BI 172 General Biology III (Majors)

This introductory course for biology majors covers organismal biology with an emphasis on evolution, biological diversity, ecology, and environmental science. Students receive hands-on experience with a broad range of topics and techniques in the accompanying laboratory. Three lectures, one lab. Four credits.

BI 201-206 Biology Teaching Practicum

This series of courses represent opportunities (up to six semesters) for Biology majors to gain experience in teaching practices in the laboratory as classroom setting. Students will be paired with an instructor, and assist in instruction, grading and overall successful running of a laboratory section. Strong prior performance in the laboratory to which the student will be assigned is required. Selection will be made by the biology department, after a general call is put out to all students who may be interested in the opportunity. (Prerequisites are BI 170, 171 and 172, and the successful completion of the laboratory to be assigned to. Instructor permission is required) One credit.

BI 260 Ecology

This course is designed as an overview of the science of ecology - the study of interactions between organisms and their environment. This course uses a hierarchical approach to describe organisms, populations, communities, and ecosystems. We discuss the types of questions ecologists ask, and the methods ecologists use to answer questions. Three lectures, one lab. (Prerequisites: BI 170, 171, and 172, CH 11-12) Four credits.

BI 261 Genetics

This course offers a comprehensive study of the fundamental principles of classical and molecular genetics. Major topics include transmission (Mendelian) genetics, gene linkage and mapping, fundamentals of molecular biology, molecular approaches to genetic analysis, genetic engineering and recombinant DNA technology, microbial genetics, developmental genetics, and population genetics. The course emphasizes the role of genetics in evolutionary biology. Three lectures, one lab. (Prerequisites: BI 170, 171, and 172) Four credits.

BI 262 Human Physiology

This course considers homeostasis in humans by means of a comprehensive survey of the morphology and physiology of human organ systems. Special emphasis is given to organ systems associated with water and electrolyte balance, respiration, digestion, movement, and neurological control. This course cannot be taken as a biology block elective if BI 313 has been completed previously. Three lectures, one lab. (Prerequisites: BI 170, 171, and 172, CH 111-112, and CH 211-212) Four credits.

BI 296 Special Topics in Biology

This course requires library research and the writing of a scholarly paper on a special topic. Students discuss topics with and must obtain consent from an appropriate professor prior to registration. Three credits.

BI 313 Comparative Physiology

This course facilitates the understanding of the physiological systems in humans (i.e., circulation, muscle, endocrine and nervous function) by using a comparative, evolutionary approach. Students will examine and compare physiological systems in humans to the range of vertebrates, including other mammals, birds, reptiles, and amphibians. This evolutionary approach will provide a more in-depth comprehension of the functioning of human physiological systems. This course cannot be taken as a biology block elective if BI 312 has been completed previously. Three lectures, one lab. (Prerequisites: BI 170, 171, and 172, CH 11-12, and CH 211-212) Four credits.

BI 314 Endocrinology

This course examines the glands of internal secretion and their location, anatomy, and function, including the mechanisms of their secretions and cell signaling importance in the regulation of body functions. Three lectures. (Prerequisites: BI 170, 171, and 172, CH 111-112, and CH 211) Three credits.

BI 315 Anatomy: Form & Function

This course examines the anatomy of animals emphasizing the functional and evolutionary diversity of vertebrates. The course will consist of lectures focused on morphological variation and evolution, readings of the primary literature and anatomical dissections of comparative structures. Three lectures. (Prerequisites: BI 170, BI 171, and BI 172) Three credits.

BI 318 Vertebrate Zoology

Fish, frogs, flamingoes and ferrets. What unites them? A backbone. This course addresses how these very diverse groups of animals actually relate and differ - in physiology, morphology and behavior. Students will discuss the advantages and disadvantages of being a member of each group, and compare across groups the things that set these groups apart from each other. The course will consist of group discussions based on the required reading in the text, supplemented extensively by direct examples (preserved and live specimens, tissues and samples) showing how the diversity of vertebrates makes them an incredibly interesting group. (Prerequisites: BI 170, 171, and 172; CH 211-212) Three credits.

BI 319/319L Zoology Field Experience

As a supplement to Biology 318 lecture or Biology 365, students will take part in an exciting field-trip experience to Brazil, where they will interact directly with research biologists doing field experiments in the Atlantic Coastal Rainforest and surrounding ecosystems of Brazil. While in Brazil, students will work in the field collecting data on a particular specialized topic, and work closely with the Brazil research team in analyzing and presenting these data in a scientifically appropriate format. Upon return to Fairfield, the semester will be spent perfecting techniques in data organization, analysis and presentation including a formal paper, poster and/or talk. Three lectures (BI 319) or three labs (BI 319L). (Prerequisites: BI 318 lecture or BI 365 or permission of the instructor, CH 211-212) Three credits.

BI 321 Animal Behavior

This comparative survey of the behavioral patterns and social relationships of invertebrate and vertebrate animals includes an examination of the genetic, physiological, and ecological mechanisms underlying behavioral interactions, and their adaptive significance. In the laboratory, students learn observational and experimental methods used in animal behavior research. Three lectures, one lab. (Prerequisites: BI 170, 171, and 172) Four credits.

BI/CH 324 Biochemistry I

This course will investigate the fundamentals of life - chemistry. The structures and functions of biomolecules, including proteins, DNA, RNA, lipids, and carbohydrates will be covered in depth. The concepts behind biological processes will be discussed, including enzyme kinetics and regulatory strategies, membrane functions, signal transduction, and an overview of metabolism. Three Lectures. (Prerequisites: BI 170, 171, and 172, CH 211-212) Three credits.

BI/CH 325 Biochemistry II

This course focuses on the regulation of metabolic pathways involved in the synthesis, breakdown, and interconversion of biochemical intermediates that are fundamental to all life. Basic principles of biological thermodynamics will be highlighted in order to understand the processes by which living cells obtain and utilize energy. Students will develop an understanding of basic biomedical principles in the context of overall cell function. Formerly listed as BI 326. Three lectures. (Prerequisites: BI 170, 171, and 172, CH 211-212) Three credits.

BI/CH 324-325L Biochemistry Lab

This course will investigate classic and most up-to-date methodology used in biochemistry. A semester project will be used to introduce techniques used in biochemistry to investigate the structure and function of a protein. In characterizing this protein, the analysis of DNA, lipids and carbohydrates will also be covered. One lab. (Prerequisite or concurrent BI/CH 324-325 lecture) One credit.

BI 327 Cell Biology

This course focuses on the structure and function of eukaryotic cells. Students explore the relationship between gene expression and protein synthesis, and discuss how different proteins coordinate a complex array of important biological tasks in the cell. The course covers the biochemical interactions that occur within and between cells that sustain viability and mediate cell communication. Topics include gene expression and protein production, enzyme structure/function, protein to protein interactions, cytoskeleton and extracellular matrix, mechanisms of transport, signal transduction, cell cycle, and apoptosis. Laboratories include analysis of cell morphology, RNA and protein expression, and assays to study the growth, differentiation, and death of eukaryotic cells in response to their environment. Three lectures, one lab. (Prerequisites: BI 170, 171, and 172, CH 11-12, and CH 211-212) Four credits.

BI 342 Developmental Biology

This course explores how the transition from a single-celled, fertilized egg to a multicellular animal is accomplished, emphasizing the dynamic interactions that occur on the molecular level to tightly control developmental processes. Topics include mechanisms of cell fate and differentiation, the molecular basis of differential gene expression, analysis of the molecular cues regulating body axis formation, and the development of various specific structures in different experimental organisms. The laboratory for the course consists of experiments that focus on the influence of gene function on development. We will do experiments that allow us to observe expression patterns of important genes in development and we will study the effects of perturbing gene function during development. Three lectures, one lab. (Prerequisites: BI 170, 171, and 172) Four credits.

BI 352 Fundamentals of Microbiology

This comprehensive introduction to microbiology includes microbial cell structure, physiology, genetics, evolution and taxonomy, diversity, ecology, and applied microbiology. Lab sessions introduce microbiological techniques (aseptic technique, microscopy, bacterial staining, culture techniques), and other research methods. Students use skills acquired in the lab to design and conduct independent investigations. Three lectures, one lab. (Prerequisites: BI 170, 171, and 172, CH 211-212) Four credits.

BI 354 Molecular Biology

This introduction to molecular biology examines protein structure, DNA structure, RNA structure, the roles of DNA and RNA in protein synthesis, and the replication and repair of DNA and RNA in eukaryotic and prokaryotic cells. Relates the effects of mutations to DNA, RNA, and proteins. Three lectures. (Prerequisites: BI 170, 171, and 172, CH 211-212) Three credits.

BI 356 Immunology

This introduction to immunology covers the humoral and cellular basis of immune response, emphasizing antigens, the structure and function of immunoglobulins, antibody formation, and living/experimental manifestations of the immune response. Three lectures. (Prerequisites: BI 170, 171, and 172, CH 211-212) Three credits.

BI 357 General Virology

This introductory course covers the entire field of virology, with a special emphasis on animal viruses. Coverage centers on the physical, biochemical, and biological aspects of each bacterial and animal virus class. Discussion stresses viral morphology; replication and assembly; pathogenesis of viral infections; and the epidemiology, prevention, and control of viral diseases. Three lectures. (Prerequisites: BI 170, 171, and 172) Three credits.

BI 358 Recombinant DNA Technology

This course provides biology majors with practical experience in recent advances in molecular biology and biotechnology. The course allows students to become familiar with the manipulation of genetic material (DNA) and to understand the techniques used for isolation and characterization of genes. Lab sessions cover topics such as the principles of aseptic technique, isolation of plasmid DNA from bacteria, transformation of bacteria and yeast, restriction enzyme digestion, agarose and polyacrylamide gel electrophoresis, and gene manipulation. Three labs. (Prerequisites: BI 170, 171, and 172, BI 354, CH 211-212) Three credits.

BI 362 Marine Invertebrate Zoology

Students study the phylogeny, ecology, morphology, and physiology of the major marine invertebrate groups with emphasis on local fauna. The laboratory component includes field trips to various habitats in Long Island Sound to collect specimens for identification and study. Three lectures, one lab. (Prerequisites: BI 170, 171, and 172 or permission of the instructor) Four credits.

BI 364 Freshwater Ecology

Students learn the applied and theoretical concepts of the field of ecology using examples from freshwater aquatic systems. In the laboratory, students learn the major groups of organisms present in aquatic systems and conduct experiments involving ecological concepts such as predation and competition. Three lectures, one lab. (Prerequisites: BI 170, 171, and 172) Four credits.

BI 365 Evolutionary Biology

The course begins with an examination of the intellectual origins of biological thought and includes a study of the historical factors that contributed to Charles Darwin's development of the theory of evolution. Topics include the evidence for evolution, the forces affecting evolution (e.g., mutation, migration, genetic drift, and selection), and natural selection as the basis of adaptation, as well as the philosophical and practical aspects of defining species and reconstructing phylogenetic relationships. Students critique (individually and in groups) current papers in evolutionary biology on topics such as punctuated equilibrium theory, Darwinian medicine, human origins, co-evolutionary arms races, systematics and biodiversity, and the evolution of sex. Three lectures, one lab. (Prerequisites: BI 170, 171, and 172) Four credits.

BI 366 Ornithology

This upper-level lecture, laboratory, and field course on avian biology has an emphasis on ecology and evolution. The course familiarizes students with the staggering diversity of birds and the adaptations that have contributed to their success. Laboratory activities include: 1) a multi-week student investigation of avian diversity of form and function, and 2) a series of field trips that emphasize unique adaptations and means of identification of birds found in Connecticut. Three lectures, one lab (Prerequisites: BI 170, 171, and 172) Four credits.

BI 368 Plant Biology: Evolution, Diversity, and Environment

This course covers the evolutionary process before moving on to evolution and diversity of land plants from bryophytes and ferns to gymnosperms and angiosperms. Students examine the environmental impact of using plants for food production and are expected to assemble a field plant collection. Three lectures, one lab. (Prerequisites: BI 170, 171, and 172) Four credits.

BI 369 Plant Biology: Morphology, Biochemistry, and Physiology

This advanced study of plant biology examines the morphology, biochemistry, and physiology of gymnosperms and angiosperms. Emphasis is placed upon the understanding of biochemical and physiological processes such as photosynthesis, water, and sugar transport in vascular plants. The laboratory features comparative and experimental approaches to understanding structure-function relationships in the plant body and the plant life cycle. Three lectures, one lab. (Prerequisites: BI 170, 171, and 172) Four credits.

BI 370 Environmental Health and Safety

This course focuses on the environmental health and safety aspects associated with use of and exposure to biologicals, chemicals, and radiation, examining the risks, hazards, and environmental impact associated with hazardous materials. The course reviews methods to minimize risk and environmental pollution; federal and state regulations associated with hazardous materials; conducting safety audits and inspections in the lab context; and proper methods of hazardous material disposal. Two lectures, one lab. (Prerequisites: CH 11-12) Three credits.

BI 372 Environmental Toxicology

Environmental toxicology is the study of the nature, properties, effects and detection of toxic substances in the environment and in any environmentally exposed species, including humans. Fundamental toxicological concepts will be covered including dose-response relationships, absorption of toxicants, distribution and storage of toxicants, biotransformation and elimination of toxicants, target organ toxicity, teratogenesis, mutagenesis, carcinogenesis, and risk assessment. The course will include an overview of chemodynamics of contaminants in the environment including fate and transport. The effects of these contaminants will then be explored on a series of scales: the molecular level (biochemical pathways of metabolism and detoxification); the organismal level (target organs, behavioral effects); and the ecosystem level (nutrient cycling and ecosystem services). Three lectures, one lab. (Prerequisites: BI 170, 171, and 172; CH 211 and 212) Four credits.

BI 375 Biochemical Ecology

In this course, students investigate the breadth of chemical compounds used by organisms for feeding, reproduction, defense, and communication and place these in an appropriate ecological and evolutionary context. In the laboratory, students gain experience in field and laboratory methods necessary for understanding chemically-mediated interactions among plants, animals, and their environments. Three lectures, one lab. (Prerequisites: BI 170, 171, and 172, CH 211-212) Four credits.

BI 381 Special Topics Seminar - Molecular Block

This course satisfies the Capstone Requirement for Biology Majors (see description above) This class may be repeated, with department and faculty permission to satisfy an upper-level block one course. The same seminar topic cannot be double-counted. (Prerequisites: BI 170, 171, and 172, one course from the Molecular Block, and senior status or permission of the instructor). Three credits. Sample topics:

- A. The Biology of Cancer: This seminar requires students to draw on nearly all of their training as biology majors to understand the disease of cancer in great detail. Topics include the genetic/cellular basis for the disease, physiological effects of tumor progression and metastasis, environmental influences, treatment modalities, and the personal, familiar and societal impacts of the disease. Students read extensively for the course and summarize and formally present current research in the field in an effort to develop their scientific communication skills.
- B. Molecular Mechanisms of Human Disease: This seminar covers the molecular and cellular events that underlie complex human diseases. Students learn to critically analyze and interpret primary literature on the molecular aspects of such diseases as cancer, diabetes, heart disease, Alzheimer's, and AIDS. Students summarize and present selected articles at each meeting and use these acquired skills to investigate a particular topic of their choice in the form of a grant proposal for their final project. Formerly listed as BI 385.
- C. Bacterial Pathogenesis: This seminar examines the role of prokaryotes in disease, with an emphasis on the genetics and physiology of disease mechanisms. Topics include aspects of the human immune response, host-parasite relationships, and the epidemiology and evolution of infectious disease. Formerly listed as BI 386.

BI 382 Special Topics Seminar - Physiology Block

This course satisfies the Capstone Requirement for Biology Majors (see description above) This class may be repeated, with department and faculty permission to satisfy an upper-level block two course. The same seminar topic cannot be double-counted. (Prerequisites: BI 170, 171, and 172, one course from the Physiology Block, and senior status or permission of the instructor). Three credits. Sample topics:

- A. Reproductive Tactics: This seminar explores the ways animals have evolved creative mechanisms – physiological and behavioral – to maximize their reproductive success. Topics will include mate choice & sexual conflict, paternity, variability in reproductive anatomy, mechanisms for successful fertilization, sperm competition and sperm choice. Course format: A reading extensive course. Students will read from a source text for foundation ideas, then will each find and present to the entire class, scientific research papers from the primary literature.
-

BI 383 Special Topics Seminar - Ecology Block

This course satisfies the Capstone Requirement for Biology Majors (see description above) This class may be repeated, with department and faculty permission, to satisfy an upper-level block three course. The same seminar topic cannot be double-counted. (Prerequisites: BI 170, 171, and 172, one course from the Ecology Block and senior status or permission of the instructor). Three credits. Sample topics:

- A. Coral Reef Ecology: Students study the complex ecological relationships found in coral reef ecosystems. Topics include discussions of reef development, coral symbiosis and growth, reef trophic dynamics, ecology and behavior of coral reef fish and invertebrates, and effects of natural and human disturbance on coral reef communities. Course format: seminar in which students read, analyze, and present scientific research papers from the primary literature. Formerly listed as BI 383.
- B. Ecology of the North Atlantic Coast: This seminar examines the processes that generate ecological patterns in North Atlantic coastal ecosystems with a focus on the ecology of salt marshes, tidal rivers, sandy beaches, and rocky shores, and the human impact on these systems. The course centers on student-led discussions of readings from scientific literature. Formerly listed as BI 388.
- C. Principles of Aquaculture: This seminar introduces students to the rapidly-growing science of aquaculture or fish farming. Using a comprehensive approach, the course includes discussions of the following topics: historical development, culture and rearing techniques, diseases, regulations, and permitting and marketing of aquatic plants and animals. Course format: seminar in which students read, analyze, and present scientific and technical papers from the primary literature. Field trips to nearby aquaculture facilities may be included. Formerly listed as BI 382.
- D. Topics in Evolutionary Biology: Evolution is the theme that unites all fields of biology. The broad objective of this course is to encourage students to integrate all the knowledge they have acquired as a biology major to critically interpret and analyze questions from an evolutionary perspective. In this seminar, we will read and discuss the current literature on major evolutionary topics, which have revolutionized the way in which we think about genomics, sex and reproduction, and our own human beginnings. We will also address important contemporary but controversial topics such as evolutionary medicine and evolutionary psychology. The course centers on student led discussions, presentations and literature critiques.

BI 391-394 Independent Research I, II, III, IV

This course requires a research thesis involving laboratory investigation. Seniors and qualified juniors obtain the consent of the professor supervising their research interest area prior to registering for this program. Past topics include aquatic ecology, bacterial ecology and physiology, biochemistry, cell-wall biosynthesis, evolution of marine invertebrates, genetic regulation of animal development, mammalian physiology, plant biostimulants, plant/insect ecology, population and disease dynamics of shellfish, and signal transduction/gene regulations. Three credits.

BI 397-398 Internships

Available for junior- and senior-level biology majors in good academic standing. Internships are available, subject to individual arrangement, for students interested in allied health, environmental science, marine science, medicine, dentistry, biotechnology, and emergency medicine. Students provide their own transportation and must discuss their internships with the department chair and obtain consent of the supervising professor prior to registering for this course. Credit by arrangement.

Program in Black Studies: Africa and The Diaspora

Faculty

Director

Williams (History)

Advisory Committee

Bucki (History)

Hohl (History)

Jones (Sociology and Anthropology)

Lacy (Sociology and Anthropology)

McKisick (History)

Sealey (Philosophy)

Torff (Visual and Performing Arts: Music)

Walker-Canton (Visual and Performing Arts: New Media Film, TV, and Radio)

Black Studies is an interdisciplinary inquiry into the body of knowledge about Africa and the African Diaspora (the global dispersion of people of African ancestry). It involves the study of the African Diaspora and its interaction with cultures and societies of the Americas. Thus, African Americans, Afro Caribbeans, Afro Asians, Afro Latinos, and Afro Europeans are among those whose histories and contributions are included in this field of study.

As an interdisciplinary program, Black Studies is devoted to scholarship on the histories, political and cultural movements, institution-building, and identities of people of African ancestry. It includes the exploration of the rich cultural heritage, legacy of resistance to oppressive structures and unique perspectives on human rights supplied by peoples of African descent. Many of the courses that specifically explore the reality of African Americans in the United States will provide a historical and comparative perspective that is informed by the experiences of people of African descent throughout the Americas, especially those in the Caribbean and Africa. The Black Studies curriculum combines humanities courses from history, literature, music, and film, together with the sciences, and social sciences to provide students with an understanding of the far-reaching impact of race and ethnicity across continents. By engaging in a comparative and theoretical examination of the African Diaspora, students will be equipped to utilize a multidisciplinary scholarly analysis of various complex global questions. The Black Studies faculty unequivocally encourages and supports students who wish to examine how their scholarship is tied to the contemporary African Diaspora, locally or internationally.

Requirements

For an 18-credit minor in Black studies, students must complete the following:

- Five courses drawn from the sciences, social sciences, history and from the humanities; no more than three courses can come from any one of these areas. The five courses must represent three different disciplines. At least three must be "focus" courses; the other two may be "component" courses.

The final 3 credits will be taken at the 300 level and requires writing and defending a research paper dealing with some aspect of the African Diaspora before the Black Studies committee. They can either sign up for BL 398 Independent Study/Research or select one of the 300 level courses listed below. If they select one of the existing 300 level offerings, students would be required to declare it as their capstone course to one of the program directors and take on the added responsibility of meeting with the directors and participating in a final defense of their work.

Course Offerings

Director

Lakeland (Religious Studies)

Advisory Board

Behre (History)

Carolan (Modern Languages and Literatures)

Dallavalle (Religious Studies)

Rose (Visual and Performing Arts)

Catholic Studies is an inter-disciplinary inquiry into the intellectual tradition, history and culture, both "high" and popular, of the Catholic Christian tradition. While the field of study includes religious questions and theological issues, it primarily follows a "cultural studies" model. In addition to courses on the Catholic Church and issues in Catholic theology, it examines the role of the Catholic tradition in history, in literature and the arts, in the history of science, and in cultural and ethical issues related to many fields of professional practice. Its purpose is to raise awareness of the distinctive contributions of the Catholic Church to religious, cultural intellectual issues throughout the last two thousand years.

The minor in Catholic Studies will explore the texts, traditions, themes, teachings, and cultural role of the Catholic Church from its inception to its contemporary expression. Particular attention will be paid to its place in contemporary America. This interdisciplinary program will enable students to study the Catholic tradition, its ethos, identity, and mission, as made tangible in history, philosophy, literature, theology, the visual and performing arts, the social and behavioral sciences, and the natural sciences.

Requirements

For a 15-credit minor in Catholic studies, students:

- Complete five three-credit courses
 - One course must be RS 230 Introduction to Catholicism
 - At least two additional courses in the Department of Religious Studies
 - At least one course outside of the Religious Studies department

Course Offerings

Modern chemistry is an interdisciplinary subject that integrates its own knowledge with that of physics and mathematics, and applies the result to solve problems in a wide variety of areas including the biological sciences and technology. The curriculum for chemistry majors emphasizes fundamental principles and applications. Courses develop critical thinking, problem-solving skills, and experimental technique in order to provide ample preparation for future study at the graduate level or in professional programs.

A bachelor of science in chemistry is a very flexible undergraduate major. In addition to a career in chemistry, this degree provides a base for study and practice of medicine, environmental science, forensic science, pharmacology, materials science, business, law, and more. A student pursuing a chemistry degree has many career options.

The Department of Chemistry and its curriculum are certified by the Committee on Professional Training of the American Chemical Society (ACS). Certified programs are defined by high quality faculty, deep and broad curriculum, modern facilities, and modern instrumentation.

Requirements

The bachelor of science degree in chemistry or biochemistry, with or without ACS certification can be achieved by following the appropriate course sequence outlined below. The first sequence describes the basic BS degree in chemistry. The second sequence is the preferred track for students seeking employment in the chemical industry or pursuing the Ph.D. in chemistry and includes ACS certification. The third sequence is the BS in biochemistry. This sequence is recommended for students interested in the pharmaceutical industry, medical or dental school, and the pursuit of the Ph.D. in biochemistry or related fields. This biochemistry sequence can also be ACS certified with the additional course work described. The ACS certified sequences feature more in-depth laboratory work and/or a greater emphasis on research.

Course Offerings

Bachelor of Science with a Major in Chemistry

Credits

First Year	<i>Fall</i>	<i>Spring</i>
CH 111-112 General Chemistry I and II	3	3
CH 111L-112L General Chemistry I and II Lab	1	1
MA 145-146 Calculus I and II or MA 171-172 Calculus I and II	4	4
PS 15-16 General Physics I and II	3	3
PS 15L-16L General Physics I and II Lab	1	1
Core courses	6	6
Sophomore Year		
CH 211-212 Organic Chemistry I and II	3	3
CH 211L-212L Organic Chemistry I and II Lab	1	1
CH 222 Chemical Analysis		3
CH 222L Chemical Analysis Lab		1
MA 245 Calculus III	4	
Core courses and electives	9	9
Junior Year		
CH 261-262 Physical Chemistry I and II	3	3
CH 261L-262L Physical Chemistry I and II Lab	1	1
CH 326 Chemical Instrumentation*	3	
CH 326L Instrumental Analytical Chemistry Lab*		3
Core courses and electives	6	9
Senior Year		
CH 341 Advanced Inorganic Chemistry*	3	
CH/BI 324 Biochemistry I*		3
CH/BI 324L Biochemistry Lab*		1
Core courses and electives	12	12

* May be taken either Junior or Senior Year

Core courses and electives	9	9

* May be taken either Junior or Senior Year

- Students intending to enter primary or secondary school teaching should consult annually with the chairs of the departments of Chemistry and Education to facilitate scheduling of these curricula.
- Students intending to enter medical or dental school should consult with the Chair of the Chemistry Department and the Health Professions Advisor for appropriate modifications of this curriculum, which will include taking BI 170-171 in freshman year in place of PS 15-16, which is then taken in sophomore year.
- Students may elect to take CH 324, Biochemistry, or CH 341, Advanced Inorganic Chemistry, in junior year.
- Note that CH 398 Research and Seminar is a research elective to be coordinated with individual faculty members. It may be taken for one, two, or three credits. Students may elect to take CH 398 in the fall, spring or both semesters.
- Students are encouraged to participate in summer research experiences on or off campus. At the discretion of the Chemistry Department, involvement in summer research such as National Science Foundation Research Experience for Undergraduate Programs may be counted toward the research requirement for American Chemical Society certification. Each case will be evaluated individually by the department.
- All research for credit will be consistent with the American Chemical Society Committee for Professional Training guidelines.

Chemistry Electives

One of the following taken during Junior or Senior Year.

Note: A student pursuing a Biochemistry Major who takes both chemistry electives is eligible for ACS* certification.

Course	Credits
CH 326 Chemical Instrumentation	3
CH 326L Instrumental Analytical Chemistry Lab	3
or	
CH 341 Advanced Inorganic	3
CH 341L Advanced Inorganic Lab (highly recommended)	2

This course provides an introduction to the scientific techniques used for the analysis of common types of physical evidence encountered at crime scenes. Using critical thinking and laboratory experiences, students become crime scene investigators. They are charged with the task of solving a mock crime. The investigations include fabric analysis, ink analysis, blood analysis, DNA analysis, fingerprint analysis, ballistics, and/or blood alcohol analysis. The lecture part of the course focuses on exploring the underlying chemical principles behind the techniques and includes discussion of historical case studies. Note: This course counts as a science core course but does not satisfy requirements for the chemistry major or minor. Three credits.

CH 10 Chemistry - Sights and Insights

This course, which fulfills a science requirement and has no prerequisites, presents chemistry via lecture, demonstration, and laboratory work. The course provides students with insights into the microscopic world of atoms and molecules to better understand the macroscopic, observable properties of real substances, and applies the models developed in the course to representative substances from inorganic, organic chemistry, and biochemistry.

Note: This course counts as a science core course but does not satisfy requirements for the chemistry major or minor. Three credits.

CH 33 Chemistry of Nutrition

This course introduces basic chemical concepts, such as the atom, molecules, chemical reactivity and energy, as well as integrating fundamental biological concepts including cell structure and basic anatomy. Further explored, on a chemical level, are the structure and function of basic nutritional components: proteins, carbohydrate, lipids, vitamins, and minerals. With a scientific foundation established, topics pertaining to nutrition and human evolution, the life cycle, and exercise will be discussed. Current social and health issues such as obesity, food technology, and fad dieting will be incorporated throughout the course. Note: This course counts as a science core course but does not satisfy requirements for the chemistry major or minor.

Three credits.

CH/BI 76 Environmental Science

The science of the environment is presented through examination of the interconnections among physical, chemical, and biological fields of inquiry. This course looks at how the global environment is altered by the human population, technology, and production of fuels and food. In this course, students will acquire a scientific understanding of current issues in environmental science and learn to evaluate claims about current environmental problems. Note: This course serves as a natural science elective in the Program on the Environment. This course counts as a science core course but does not satisfy requirements for the chemistry or biology major or minor. Three credits

CH 83 Survey of Chemistry

This one-semester course presumes no previous chemistry and fulfills a science requirement. The course consists of an introduction to atomic and molecular structure and the correlation of structural models to observable phenomena. The course discusses topics of historical and current relevance to society, including environmental issues, energy sources, natural products, and the application of chemistry in industry and medicine. Note: This course counts as a science core course but does not satisfy requirements for the chemistry major or minor. Three credits.

CH 84 General Chemistry for Health Science

This course introduces the general principles of chemistry (matter and measurement, atomic and molecular structure, energetics, acids and bases, oxidation, and reduction) in a manner that prepares students to relate to properties of organic materials and biologically relevant substances such as carbohydrates, lipids, peptides, proteins, and nucleic acids. Approximately two-thirds of the course focuses on general principles; the remainder introduces organic and biologically relevant substances. This course is directed primarily to School of Nursing students, who are required to take a lab component. The lecture course satisfies a core requirement. Note: This course counts as a science core course but does not satisfy requirements for the chemistry major or minor. (Co-requisite: CH 84 Lab) Three credits.

CH 84 General Chemistry for Health Science Lab

This lab illustrates lecture concepts of CH 84 and allows students to observe relevant physical systems. (Co-requisite: CH 84 lecture) One credit.

CH 85 Chemistry, Energy, and the Environment

This course explores the flow of energy in modern society from the perspective of chemistry. Topics include hydrocarbons; biomass; and hydro, solar, tidal, wind, and nuclear energy sources. Students consider the source of energy, how it is harvested, and the short- and long-term environmental consequences of using each energy source and how these consequences are determined. The course uses the concepts of bonding, thermodynamics, kinetics, and work to investigate these and related ideas. The course also discusses economic and political forces that shape our use of energy. Note: This course counts as a science core course but does not satisfy requirements for the chemistry major or minor. Three credits.

CH 86 Chemistry and Art

This basic chemistry course with a strong orientation to the visual arts fulfills a core science requirement. Basic concepts include atoms, molecules, elements, compounds, the periodic table, chemical bonding and reaction, acids and bases, oxidation and reduction, and polymers. The lab employs these concepts to examine aspects of art media such as light, color, dyes, paint, metals, stone, ceramics, glass, plastics, paper, and fibers. Note: This course counts as a science core course but does not satisfy requirements for the chemistry major or minor. Three credits.

CH 87 Molecules of Life

This course explores the modern science of biologically relevant compounds and substances, which exist at the intersection of chemistry, biology, and medicine. We examine the major molecular components of the cell - proteins, nucleic acids, lipids, and more - and illustrate the application of chemical principles to understanding their structure and function. Since our lives are increasingly influenced by the availability of new pharmaceutical agents ranging from drugs that lower cholesterol to those that influence behavior, we develop insights needed to understand drug action and consider the design of new ways to intercede in the disease process. Note: This course counts as a science core course but does not satisfy requirements for the chemistry major or minor. Three credits.

CH 111-112 General Chemistry I and II

This two-semester, sequential course covers atomic and molecular weights, the mole concept, Avogadro's number, stoichiometry, energy relationships in chemical systems, the properties of gases, the electronic structures of atoms, periodic relationships among the elements, chemical bonding, geometries of molecules, molecular orbitals, liquids, solids, intermolecular forces, solutions, rates of chemical reactions, chemical equilibrium, free energy, entropy, acids and bases, aqueous equilibria, electrochemistry, nuclear chemistry, chemistry of some metals and nonmetals, and chemistry of coordination compounds. (Co-requisite: CH 111-112 Lab) Three credits per semester.

CH 111-112 General Chemistry I and II Labs

This lab offers the opportunity to explore and experience the rigors of an experimental physical science. Students make and record observations on simple chemical systems while learning fundamental laboratory manipulative and measurement skills. Experiments demonstrate and supplement concepts introduced in lecture. The first semester emphasizes weighing, filtering, titrating, using volumetric glassware, observing data, and recording and synthetic techniques. The second semester integrates these techniques in experimental procedures and explores physical properties and quantitative analysis of selected chemical systems. One credit per semester. (Co-requisite: CH 111-112 Lecture).

CH 211 Organic Chemistry I

This course, an introduction to the chemistry of carbon compounds, discusses common functional groups from the perspective of molecular structure. Areas of emphasis include structure and characterization, preparation or organic synthesis, and the relations of physical and chemical properties to molecular structure. Stereochemical concepts introduced early in the course are used throughout. (Prerequisite: CH 112; Co-requisite: CH 211 Lab) Three credits.

CH 212 Organic Chemistry II

This course is a continuation of CH 211 and presents the chemistry of aromatic, carbonyl, acyl, and nitrogen compounds. The course relates the chemical properties of naturally occurring substances such as carbohydrates, lipids, proteins, and nucleic acids to those of simpler monofunctional compounds. Spectroscopic methods of structure determination are introduced early in the course and used throughout. (Prerequisite: CH 211; Co-requisite: CH 212 Lab) Three credits.

CH 211-212 Organic Chemistry I and II Lab

The first semester of this lab emphasizes the manipulative techniques of separation, purification, analysis, and simple syntheses. The second semester emphasizes investigative experiments, more complex synthesis, and qualitative organic analysis. (Co-requisite: CH 211-212 lecture; Co-requisite: CH 211-212 lecture) One credit per semester.

CH 222 Chemical Analysis

This course provides the theoretical basis for the required laboratory. Topics include statistics, chemical equilibria and their analytical applications (acid-base, oxidation-reduction, complex formation, precipitation), electroanalytical chemistry, spectroanalytical chemistry, and chemical separations. (Prerequisite: CH 112; Co-requisite: CH 222 lab) Three credits.

CH 222 Chemical Analysis Lab

Students explore quantitative aspects of chemistry through the analysis of unknowns and the characterization of chemical equilibrium, and pursue classical and instrumental methods of analysis. (Co-requisite: CH 222 lecture) One credit.

CH 261-262 Physical Chemistry I and II

A two-semester sequential offering that covers thermodynamics of gases, pure liquids, and both electrolyte and non-electrolyte solutions. Additional topics include chemical equilibrium, transport phenomena, reaction kinetics, quantum mechanics, spectroscopy, and statistical mechanics and statistical thermodynamics. (Prerequisites: CH 112, MA 146 or higher, and PS 16; Co-requisite: CH 261-262 Lab) Three credits per semester.

CH 261-262 Physical Chemistry Labs

This course demonstrates and verifies concepts covered in lecture courses CH 261 and CH 262. Each lab meets weekly for three hours, during which students perform experiments with precision and care. The course incorporates current technology into each experiment and uses computers in data acquisition, reduction, and reporting. The course places special emphasis on data handling techniques and the accurate recording of observations. (Prerequisites: CH 112, MA 146 or higher, and PS 16; Co-requisite: CH 261-262 lecture) One credit per semester.

CH/BI 324 Biochemistry I

This course will investigate the fundamentals of life - chemistry. The structures and functions of biomolecules, including proteins, DNA, RNA, lipids, and carbohydrates will be covered in depth. The concepts behind biological processes will be discussed, including enzyme kinetics and regulatory strategies, membrane functions, signal transduction, and an overview of metabolism. (Prerequisites: CH 212 or department permission) Three credits.

CH/BI 324/325L Biochemistry Lab

This course will investigate classic and most current methodology used in biochemistry. A semester project will be used to introduce techniques used in biochemistry to investigate the structure and function of a protein. In characterizing this protein, the analysis of DNA, lipids and carbohydrates will also be covered. (Taken concurrently with either CH/BI 324 or CH/BI 325 lecture) One credit.

CH/BI 325 Biochemistry II

This course focuses on the regulation of metabolic pathways involved in the synthesis, breakdown, and interconversion of biochemical intermediates. Students develop an understanding of basic biochemical principles in the context of overall cell function. Laboratory exercises expose students to a broad range of modern biochemical investigative methods. Formerly listed as BI 326. Three lectures. (Prerequisites: BI 170, 171 and 172, CH 211-212) Three credits.

CH 326 Chemical Instrumentation

Students study chemical analysis in detail, using modern instrumentation. Students explore current methods of analysis, theory of transduction, implementation of instrumental principles, and physical theory of chemical systems in the context of the goals of the analytical problem and consider examples of applications. (Prerequisite: CH 222) Three credits.

CH 326 Instrumental-Analytical Chemistry Lab

This course exposes students who have already been introduced to the theory of classical (CH 222) and instrumental (CH 326) methods of analysis to problem solving using a variety of physical and chemical methods. The early portion of this course consolidates the classroom principles of analytical chemistry into a holistic understanding of analytical chemistry, giving students a further appreciation of the general considerations made when designing an approach to problem solving in analysis. Students receive hands-on exposure to the following aspects of analytical chemistry: basic electronics as appropriate to common instrumentation, methodology involved in equipment maintenance and troubleshooting, exposure to solving real-world analytical problems, and use of small computers and interfaces in the lab. The course emphasizes oral communication of results among all lab participants. (Prerequisites: CH 222, CH 326 course) Three credits.

CH 341 Advanced Inorganic Chemistry

This course introduces students to the interdependence of chemical bonding, spectroscopic characteristics, and reactivity properties of coordination compounds and complexes using the fundamental concept of symmetry. The principles of coordination chemistry will be introduced after reviewing atomic structure, the chemical bond, and molecular structure. A basic familiarity with symmetry will be formalized by an introduction to the elements of symmetry and group theory. The students will use symmetry and group theory approaches to understand central atom hybridization, ligand group orbitals, and the construction of qualitative molecular orbital (MO) energy diagrams including both sigma and pi bonding contributions. The students will continue to utilize their understanding of group theory during an introduction of electronic spectroscopy and the use of correlation and Tanabe-Sugano diagrams. MO diagrams will then be used as a starting point for understanding the reactivity properties of coordination complexes. (Co-requisite: CH 261) Three credits.

CH 341 Advanced Inorganic Chemistry Lab

The laboratory portion of CH 341 is a synthetic inorganic lab with an emphasis placed on characterization. In the laboratory, students will have the opportunity to synthesize, characterize, and investigate the physical and reactivity properties of coordination, organometallic, and air-sensitive complexes. Students will utilize the following instrumental methods to characterize their compounds: UV-Visible spectroscopy, magnetic susceptibility, polarimetry, infrared spectroscopy, and NMR spectroscopy. The students write formal laboratory reports for every experiment. (Co-requisite: CH 261) Two credits.

CH 363 Advanced Topics

This course, intended for second semester senior chemistry majors, offers a detailed, advanced treatment of topics from any of the major fields of chemistry, tailoring topics in a given semester to meet the needs and interests of enrolled students. Professors vary based on chosen topics. One, two, or three credits.

CH 398 Research and Seminar

Students undertake a research project in conjunction with a faculty member and present two seminars: one pertaining to a literature topic, the other focused on their research. (Prerequisite: by departmental permission) One, two, or three credits.

CH 399 Independent Study

This course, designed for students seeking an in-depth examination of a pre-specified area under the close direction of a faculty member(s) presents topics not routinely encountered in the normal course sequence. (Prerequisite: CH 262 or by departmental permission.) Three credits.

Program in Classical Studies

Faculty

Director Brill (Philosophy)

Professor

Rosivach

Classical Studies Committee

Drake (Philosophy)

Long (Philosophy)

Rose (Visual and Performing Arts)

Ruffini (History)

Schwab (Visual and Performing Arts)

The Program in Classical Studies provides students with a broad background in the history and culture of classical antiquity, both as an aid to their general cultural education and to assist them in their own major fields. Courses are offered in Latin and Greek, and in English translation. The Program in Classical Studies offers two minors. The 24-credit bachelor of arts with classics, intended for students wishing to focus on the ancient languages, consists of four courses each in Latin and Greek. The 15-credit minor in classical studies is a broader program, consisting of five or more courses drawn from the program's offerings and from related courses in other departments, including Art History, History and Philosophy. Appropriate courses used for the minor in Classical Studies may also be used simultaneously to fulfill the core requirements in history, philosophy, arts, English literature, and foreign language. Students may also design a major in Classical Studies as an individually designed major (see catalog entry for Individually Designed Major). The program also makes available, as a general service to the University, courses in English and the original languages for those interested in specific aspects of classical antiquity.

Course Descriptions

Classical Civilization

CL 103/CL 106/EN 106* Masterpieces of Greek Literature in English Translation

This course surveys major works of ancient Greek literature, emphasizing the content of this literature as a key to understanding classical Greek civilization and as meaningful in a contemporary context. Three credits. *May be taken to fulfill the core requirement in English literature.

CL 104/CL 107/EN 107* Masterpieces of Roman Literature in English Translation

This course surveys major works of Roman literature of the republic and early empire, emphasizing the content of this literature as a key to understanding Roman civilization, and as meaningful in a contemporary context. Three credits. *May be taken to fulfill the core requirement in English literature.

CL 108/CL 121/EN 108* Myth in Classical Literature

This course introduces students to classical mythology through an examination of the diverse ways in which myth and legend are treated in the literatures of ancient Greece and Rome. Students read texts in English translation; knowledge of Greek or Latin is not required. Three credits. *May be taken to fulfill the core requirement in English literature.

CL 109/CL 122/EN 109* Greek Tragedy in English Translation

An intensive study in translation of the surviving works of Aeschylus, Sophocles and Euripides. Knowledge of Greek is not required. Three credits. *May be taken to fulfill the core requirement in English literature.

CL 115** Greek Civilization

Students study the Greek experience: the social and cultural values, political institutions, and economic structures of the ancient Greeks and their effect on the historical process in the period down to the death of Alexander. Knowledge of Greek is not required. Three credits. **May be taken to fulfill the core requirement in history.

CL 116** Roman Civilization

Roman civilization spanned more than 1,000 years of history and culture, and influenced western society in profound ways. This course traces Rome's development from a small local tribe to a world power, examining how it expanded and conquered the Mediterranean and absorbed into its culture aspects of the peoples it defeated. Knowledge of Latin is not required. Three credits. **May be taken to fulfill the core requirement in history.

CL 123* Women in Classical Literature

The course explores the roles of women in ancient Greek and Latin literature through an examination of literary characterizations of women from a variety of genres, including epic poetry, tragedy and comedy. The emphasis of the course will be on the careful reading and analysis of primary texts in translation. Knowledge of Greek and Latin is not required. Three credits. *May be taken to fulfill the core requirement in English literature.

CL/EN 127* Romantic Love in Greek and Roman Literature

The course of true love never did run smooth. From Homer's Penelope to Ovid's *Remedies of Love* we will examine the permutations of romantic desire and its frustrations in the literature of Greece and Rome. Readings also include selections from Sappho's poetry, Sophocles' *Women of Trachis*, Euripides' *Hippolytos* and *Medea*, comedies by Menander and Terence, Catullus poems to Lesbia, Vergil's tale of Dido and Aeneas, selections from the elegies of Tibullus, Propertius and Ovid, and briefer excerpts from other authors. All readings are in English translation. *May be taken to fulfill the core requirement in English literature. (Prerequisites: EN 11 and EN 12) Three credits.

CL 199 Special Topics in Classical Studies

This course explores a specific topic in the interdisciplinary field of classical studies. Content will vary in successive offerings of this course. Three credits.

CL/HI 221 The Hellenistic World, 336-30 BC

The course examines the Mediterranean world and the ancient near east from the late fourth to late first centuries BC. Focus is on: the career of Alexander the Great; the Greek kingdoms that emerge after the collapse of his empire; the interaction between local cultures and religions - e.g. Egypt, ancient Judaism - and Greek civilization; the social history of daily life in conquered lands under Greek rule; and the transformations in the Hellenistic world with the arrival of Roman rule. (Prerequisite: CL 115 or HI 30) Three credits.

CL/HI 222 The Roman Revolution

This course presents a comprehensive study of the political, social, artistic, literary, and military transformation of Rome from the middle of the second-century B.C. through the reign of Augustus, with special attention given to Rome's response to the cultural and governmental challenges imposed by its growing empire and how its responses forever changed the course of Western civilization. (Prerequisite: CL 116 or HI 30) Three credits.

CL/HI 223 The Roman World in Late Antiquity, 284-642 AD

The course examines the Mediterranean world from the third to seventh centuries AD. Focus is on: the collapse of the Roman Empire in western Europe; the dramatic upheavals caused by the arrival in the Roman Empire of the Visigoths, Vandals, and other barbarian tribes; the survival of the Byzantine East through the early Islamic conquests; the rise of Christianity from a persecuted religion to the official religion of the Roman Empire; and the accompanying cultural transformations, including the rise of monasticism and the importance of the holy man. (Prerequisite: CL 116 or HI 30.) Three credits.

CL/HI 301 Ancient Greece, Rome and Africa

The course examines the interaction between Greco-Roman civilization and ancient African civilizations, in the period from the sixth century BC to the sixth century AD. Focus is on: initial contacts between mainland Greece and Pharaonic Egypt; the period of Greek rule in Egypt and subsequent Greek expansion in Sudan and the Red Sea; initial contacts between Republican Rome and North Africa, and subsequent Romanization in that region; the period of Roman imperial rule in Egypt and subsequent Roman expansion in Sudan and the Red Sea; and the Byzantine diplomatic interaction with and role in Christianization of Nubia and Axumite Ethiopia. This course meets the world diversity requirement. (Prerequisite: either CL 115 or CL 116, or a 200-level History course.) Three credits.

CL 399 Capstone Project in Classics

Students completing an individually designed major in classical studies develop and carry out a major project that allows them to pull together the multiple threads of their interdisciplinary major. (Prerequisites: at least seven courses in the individually designed major) Three credits.

Greek**GR 111 Elementary Attic Greek**

Students study the grammar of Attic Greek. The course employs readings in easier authors to develop a practical reading knowledge of ancient Greek. Three credits.

GR 210/211 Intermediate Greek Readings

This two-semester course includes intensive reading of selected authors of moderate difficulty in various genres, with extensive readings in translation, to give a survey of classical Greek literature. The two-semester course fulfills the core requirement in foreign languages. (Prerequisite: GR 111 or equivalent) Three credits per semester.

GR 325/328 Advanced Greek Readings I-IV

Involves extensive readings of selected works of ancient Greek literature. (Prerequisites: GR 210-211) Three credits per semester.

Latin

LA 111 Basic Latin

The course presents an intensive study of Latin grammar. Students who complete this course continue in LA 210-211. Four credits.

LA 210/211 Readings in Latin Prose and Poetry

For students with a high school background or the equivalent in Latin, this course fills out that background through extensive readings in the principal authors and genres not read in high school. The two-semester course fulfills the core requirement in foreign languages. Three credits per semester.

LA 321/322 Latin Poetry

Involves extensive readings of selected authors of Latin poetry. (Prerequisites: LA 210-211) Three credits per semester.

LA 323/324 Latin Prose

Students undertake extensive readings of selected Latin prose authors in this two-semester course. (Prerequisites: LA 210-211) Three credits per semester.

Communication envelops our lives - it shapes our ideas and values, gives rise to our politics, consumption and socialization, and helps to define our identities and realities. Its power and potential is inestimable - from briefest of text messages to grandest of public declarations, we indeed live *within* communication and invite you to join us in appreciating its increasing importance in contemporary society. From Twitter and reality television to family relationships and workplace dynamics, communication is about understanding ourselves, our media, our relationships, our culture and how these things connect.

The study of communication at Fairfield University focuses on the description and analysis of how humans acquire, process, and use information in a variety of contexts. As one aspect of a liberal education, undergraduate work in communication helps students:

- become more aware of factors that influence and are influenced by human communication behavior and media practices;
- develop intellectually by providing a basis from which to analyze, synthesize, and critically evaluate messages from varied sources, including the media; and
- learn techniques and strategies to propose policies, advocate positions, and persuasively express themselves in various contexts in the pursuit of a more just society.

Communication courses engage students actively in understanding interaction in interpersonal, organizational, public, mediated, and cultural contexts. Students who successfully complete the Communication major will be able to: (1) recognize the centrality of communication in constructing, sustaining and transforming meaning, identities, relationships, communities and cultures, (2) understand and apply communication theories and concepts to everyday face-to-face and computer-mediated interactions with friends, significant others, family, coworkers, acquaintances and strangers, (3) demonstrate critical thinking and analytical reasoning, which includes identifying, evaluating, and integrating relevant sources for argumentation, research, and message creation, and identifying explicit and tacit constitutive elements of mediated messages, and (4) demonstrate oral and written competencies, which includes understanding that all communication is rhetorically situated, building and evaluating arguments, and designing, conducting, and reporting original communication content and research.

The Major

Requirements

To earn a 30-credit major in communication, students follow a program of study designed to develop breadth and depth of knowledge about communication processes in a variety of contexts. The communication major consists of ten three-credit courses. All communication majors complete a set of five (three-credit) required courses known as communication foundations. With the aid of the communication faculty, students have the ability to focus their studies in several areas of interest and to develop a personalized trajectory that best suits their theoretical and applied interests.

Communication majors are strongly encouraged to complete minors related to their areas of interest, to continue their foreign language beyond the intermediate level, to study abroad, and to pursue internships that allow for applied learning of theoretical material. The requirements of the communication foundations and the areas of interest are detailed below.

Required for all communication majors

Communication Foundations (15 credits)

CO 100 Human Communication Theories

CO 101 Argument and Advocacy

CO 130 Mass Media and Society

CO 200 Interpersonal Communication Theories (Prerequisite: CO 100)

CO 309 Research Projects in Communication:

The Capstone (senior majors only)

- CO 100 and CO 101 are the foundational courses in the communication major. Students should plan to take both courses during the same semester, preferably during their first or second year. CO 100 and CO 101 should be taken before taking the 200- and 300-level communication courses.
- Students should plan to enroll in CO 200 and CO 130 after successful completion of CO 100 and CO 101. CO 200 and CO 130 need not be taken during the same semester.
- Students complete CO 309 - the required capstone course - during their senior year.

Communication Interests (15 credits)

All majors must also select five additional CO courses, at least one of which must be a 300-level course (that does not include internships, independent studies or capstone experiences). Students who matriculated prior to September 1, 2011 are permitted to take two approved courses from outside the major to satisfy up to 6 credits under "Communication Interests."

- No course that counts toward the communication major can be applied to "double count" for the University core.
- With the approval from the Department Chair, double majors can "double count" up to two courses from their second major as communication electives. Some second major and minor programs may also choose to "double count" communication courses to satisfy the second major or minor requirements. Students should check with those second major or minor chairs for approval.
- Internships (CO 398 and 399) can be counted toward the major one time only. Although two internships can be completed for academic credit (up to 6 credits) only 3 credits will count toward the CO major.
- Independent studies do not count toward the communication major.
- Special topics courses (CO 329, CO 339 and CO 349) can each be taken twice for credit if the titles of the courses are different.
- Students are encouraged to meet with faculty advisors to design a comprehensive academic plan that takes advantage of the varied offerings in the Communication Department as well as from complimentary majors, minors and programs across the University.
- Possible interest areas that can be pursued through a major in communication include media studies, organizational communication, communication and the human condition, intercultural communication, critical and cultural studies, interpersonal communication and other interest areas determined in consultation with a faculty advisor. Students should note that course offerings vary from semester to semester. Additionally special topics courses as well as new course offerings may be developed from semester to semester that would complement particular areas of interest. The Communication Department Handbook for Majors, available on the University website, provides more specific suggestions regarding courses relevant to specific areas of interest.

Minor in Communication

To earn a 15-credit minor in communication, students are required to complete the following five three-credit courses:

CO 100 Human Communication Theories

CO 101 Argument and Advocacy

CO 130 Mass Media and Society

CO 200 Interpersonal Communication Theories

(Prerequisite: CO 100)

Any other 200- or 300-level course offered by the Department of Communication *except CO 397 Independent Study and CO 398/9 Internship*. Communication minors may not enroll in CO 397 or CO 398/9. Communication majors receive priority registration for all CO courses.

Independent Study and Internship Policies

The Department of Communication offers credit for independent study - CO 397 - to highly self-motivated communication majors in their junior or senior year of studies. Interested students must discuss and document their independent study proposals with a member of the communication faculty before registering for credit. As an elective course recommended only for the most motivated students, CO 397 does not satisfy any requirements in the communication major (or minor), but counts towards graduation.

The Department of Communication also sponsors an active internship program for qualified (2.8 overall GPA) junior and senior majors. Students may earn no more than six internship credits. One three-credit internship course - CO 398 - can be used in fulfillment of the final elective requirement in any of the three areas of concentrated study within the communication major. Communication majors interested in applying for an internship complete the departmental internship application form before registering for CO 398 or CO 399.

Course Descriptions

CO 100 Human Communication Theories

This course introduces major theoretical perspectives that inform communication scholarship. This foundational course for the major emphasizes understanding human communication as a symbolic process that creates, maintains, and alters personal, social, and cultural identities. Students critique research literature in the communication field in this course, which is a prerequisite for the 200- and 300-level communication courses. This course counts in the social and behavioral sciences core curriculum for non-majors. All CO majors must fulfill their social science core requirements outside of the major. Three credits.

CO 101 Argument and Advocacy

This introduction to public speaking and the advocacy process includes topic identification; methods of organization, research, selection, and arrangement of support materials; audience analysis and adaptation; patterns and fallacies of reasoning; uses of evidence; logical proof; and refutation. Students practice and critique informative and persuasive presentations in this course, which is a skill required in all 200- and 300-level communication courses. Three credits.

CO 130 Mass Media and Society

This media literacy course offers theoretical and practical tools to critically analyze media texts, as well as understand different ways in which audiences interact with them. Students will inquire into how the pervasive mediation of human experience through mass communication channels affects almost every aspect of socialization processes and people's symbolic environment. The interplay between structural constraints conveyed in media's messages and humans' capacity to exercise interpretive agency is addressed through lectures, audiovisual examples, hands-on activities, and a variety of assignments aimed at discerning the elements that intervene in the construction and reception of media texts, beyond their apparent components. This course counts in the social and behavioral sciences core curriculum for non-majors. All CO majors must fulfill their social science core requirements outside of the major. Three credits.

CO 200 Interpersonal Communication Theories

An examination of one-to-one relationships from a variety of theoretical perspectives, this course focuses on the centrality of communication in building familial bonds, friendships, and work teams. Students examine factors influencing interpersonal communication such as language, perception, nonverbal behavior, power, status, and gender roles. (Prerequisite: CO 100) Three credits.

CO 201 Persuasion

This course develops students' understanding of the major theoretical approaches to the study of persuasion as a particular type of social influence, giving specific attention to the processes of interpersonal influence and the media's role in changing social attitudes. Students construct communication campaigns to apply persuasion concepts and skills. (Prerequisites: CO 100, CO 101) Three credits.

CO 202 Group Communication

This course examines the basic characteristics and consequences of small-group communication processes in various contexts including family, education, and work groups. The course stresses interaction analysis and teambuilding. Because the course involves examining small groups in process, students do a substantial amount of group work. (Prerequisite: CO 200) Three credits.

CO 220 Introduction to Organizational Communication

Taking a historical and communication-centered approach to understanding how business and professional organizations function, this course addresses the analysis of upward, downward, and lateral communication; communication channels and networks; power and critical theory; organizations as cultures; internal and external public communication; and leadership. The course uses a case study approach. (Prerequisite: CO 200) Three credits.

CO 231 Media Institutions

The course concentrates on the economic, political, and legal environment of U.S. mass media. Issues include examination of individual media industries, the economic structure of U.S. media markets, media law and regulation, media watchdogs, advocacy organizations, and media users' forms of collective action. The course's content is approached through an institutional analysis perspective, intended to facilitate students' understanding of institutions as dynamic points of confluence for organizations, norms, and individual agents. As part of the course's requirements, students conduct a research project exploring recent developments and/or decision-making processes within one of the major media institutions covered during the semester. (Prerequisite: CO 130) Three credits.

CO 236 Gender, Sexuality, and Media

This course enables students to examine the relationship between the representation of women and the development of personal and social identity. Students explore issues of gender and reception, cultivating consumerism, body image, and developing relevant new images through theoretical readings as well as the analysis of various media, including television, film, magazines, and advertisements. The course also covers the experiences of women in a variety of media professions. This course meets the U.S. diversity requirement. (Prerequisite: CO 130) Three credits.

CO 237 Sports, Media, and Culture

Sports have long played a vital yet complex role in culture and this course examines the intersection of sports, the mass media, and society. Drawing upon Durkheimian theory, we will appraise and debate the ways in which sports are functional or problematic in their impact on and relationship to players, fans, journalists, co-cultural groups, and nations. Students will read both scholarly and journalistic reflections, view popular and documentary films, and analyze fan experiences, mediated presentations, and critical social issues. In short, we will go beyond the box score to understand the importance - and deconstruct the hype - that accompanies modern sports. (Prerequisite: CO 130 or instructor approval) Three credits.

CO 238 Communication and Popular Culture

This course takes the cultural artifacts that engulf us, from fashion to television and from music to comic books, and removes these practices and texts from simply being "entertainment" or "diversion" and asks what these things mean, how they constitute power, and how they shape and reflect the lived experiences of consumers. This course takes very seriously those things that are typically discarded as lacking substance and instead suggests that the meanings and impact of popular culture have dramatic consequences for political, social, and cultural life in the United States. (Prerequisite: CO 130 or instructor approval) Three credits.

CO 239 Consumer Culture

This course explores how social meanings are constructed through commodities and material society, how consumer goods and practices create categories of social difference. In particular, the course focuses on the intersections of consumer practices and gender/sexuality, race and class, articulating the relationship between communication and consumption practices and social/cultural identities. Theoretical approaches include Marxism, Post-modernism, and other economic and social critiques, and explore research methods to empirically investigate questions of culture. Students reflect on questions of social justice in relation to an increasingly materialistic society as they seek to become citizens prepared to "consume with a conscience." This course meets the U.S. diversity requirement. (Prerequisite: CO 130) Three credits.

CO 240 Intercultural Communication

This course deals with challenges to communication between people of different cultural backgrounds, emphasizing the ways communication practices reveal cultural values and the role of communication in creating and sustaining cultural identities. Students discuss how differences in value orientation, perception, thought patterns, and nonverbal behavior cause misunderstanding, tension, and conflict in business, education, and health-care settings. This course meets the U.S. diversity requirement (registration preference given to Communication and International Studies majors). (Prerequisite: CO 100 or IL 50 or instructor approval) Three credits.

CO 241 Communication and Culture: East and West

This course examines the dynamics of culture and communication focusing on the East-West dyad. It helps students gain a better understanding of why and how cultural issues influence our communication. The course explores the East-West cultural similarities and differences in values, communication processes, cognition, and relationships. It will enhance students' intercultural awareness and sensitivity in our increasingly globalized society. (Prerequisite: CO 100, IL 50 or instructor approval) Three credits.

CO 246 Family Communication

In this course students come to understand how families are constituted through symbolic processes and interaction; explore the verbal and non-verbal communication behaviors that are developed and preferred in different kinds of families; learn various theories for understanding family interactions at the individual, dyadic, group, and systems levels; analyze family communication patterns using established theories and methods; connect family dynamics to social trends and processes including the roles of the mass media and popular culture; and explore ways culture, class, gender, and sexuality affect and are affected by family structures, roles, and communication patterns. (Prerequisite: CO 200 or instructor approval) Three credits.

CO 248 Health Communication

This course surveys the multidimensional processes used to create, maintain, and transform complex scientific information into everyday healthcare practices. A major emphasis is on the processes and complexities of communicating health information in a variety of settings (in hospitals, families, insurance companies, policy organizations, etc.) and through different channels (face-to-face, in medical records, through the mass media, etc.). We will study the verbal and non-verbal communication behaviors of providers, patients, families, insurers, and others in healthcare contexts, as well as health-related messages in the mass media, in order to understand effective and problematic communication about illness and health. (Prerequisite: CO 130, CO 220 or instructor approval) Three credits.

CO 309 Research Projects in Communication: The Capstone

This course allows students to demonstrate their expertise as communication scholars through discussion and evaluation of contemporary research in communication. The course examines qualitative and quantitative methodologies in understanding the research design process. As members of research teams, students design and conduct research projects related to their areas of concentrated study. This is the required major capstone course. (Prerequisites: Senior status and CO 100, CO 101, CO 130, CO 200, at least one intermediate or advanced course in student's area of concentrated study) Three credits.

CO 321 Communication Processes in Organizations: Negotiation

This course reviews and explores, through simulation and experiential learning, negotiation as a communication process in and among organizations. It focuses on core concepts and approaches to negotiation, and exercises the negotiative process in a contemporary context. In this course, which is open to majors and minors in communication and other disciplines related to the study of humans and their organizations in the work world, participants carry out individual and team work, and contribute on time and proportionately to team preparations and class simulations. (Prerequisites: CO 220 and junior or senior status) Three credits.

CO 322 Leadership Communication

This course examines the processes and complexities of being a leader in today's dynamic organizational environment. The course explores the leadership styles, traits, and communication skills required of effective leaders. In addition, theories of leadership and the impact of culture and ethics, both historically and currently, will be studied. This course uses a combination of lecture, discussion, individual and group learning opportunities, including interviews of professional and community leaders, as well as a written and oral research projects to aid in students' assimilation of the material. (Prerequisites: CO 220 and junior or senior status) Three credits.

CO 323 Gender and Organizing

Gender is central to how we organize our lives. The way we communicate about gender can enhance or undermine all of our relationships. The purpose of this seminar is to augment, or even change, our understanding of the relationship between gender, communication, and organizations. Specifically, the goal for this course is to use a combination of scholarly essays and journal articles as well as popular news media to examine critically topics such as femininity, masculinity, and sexuality within the following contexts: education, sports, politics/government, leadership, the military, and other professions and organizations. (Prerequisite: CO 220 or instructor approval) Three credits.

CO 325 Organizational Communication and Advertising

This course will highlight how organizations market, promote, and advertise their brands. The importance of advertising for organizations, consumers, and the U.S. economy will also be a central focus of this class. Furthermore, the critical roles of research, audience analysis, persuasion, and effective communication in altering consumers' perceptions will be explored from both theoretical and applied perspectives. The value of deconstructing ads from a consumer, brand manager, and advertiser's viewpoint will be stressed and explored. In addition, the historical and contemporary ethical implications of advertising, especially in health care and for children, will be closely examined. (Prerequisites: CO 130 or permission of the instructor) Three credits.

CO 329 Contemporary Topics in Organizational Communication

This is an upper-level, undergraduate seminar for students in the Organizational Communication emphasis of the major. The course provides an opportunity to examine in depth particular theories of organizational communication, or to conduct research about communication in particular types of organizations. Emphasis is on contemporary theoretical and/or methodological approaches to the close analysis of interpersonal, group, and intercultural communication in organizational settings, or strategic communication practices of organizations with their external audiences/publics. Topics may include: Organizational Communication in the Global Economy; Communication in Healthcare Organizations; Gender and Communication in Organizations; and Communication in Organizational Crisis. Students may take CO 329 up to two times with different topics. (Prerequisites: CO 220 and junior or senior status) Three credits.

CO 331 American Media/American History

This course examines the role of communication media in history, as well as the history of the media industries. From the earliest media of symbolic interaction to the newest technologies, the course examines why different media come into being, how they function in various societies, and their impact. Students come to understand how media have been influential in maintaining social order and as agents of change. The course pays attention to a variety of national media and international perspectives, with special emphasis on the evolution of American broadcasting. (Pre- or co-requisite: CO 130) Three credits.

CO 334 Comparative Media Systems

This course provides a comparative overview of the economic and regulatory structure of media industries worldwide. By exploring the ways in which different institutional frameworks, structural factors, and audiences' agency affect mass communication within and across regional borders, this course offers a comprehensive picture of common and interdependent processes underlying the individual development of media industries in each region. Students learn about emerging market and research trends concerning international media. Issues related to free flow of messages, social responsibility, universal access, intellectual commons, participatory communication, developmental communication, and cultural diversity in the global exchange of media messages through discussion of current, real-life cases, as well as through design and execution of an original research project. (Prerequisite: CO 130) Three credits.

CO 335 Globalization, Media, and Culture

Globalization, a complex and transformative process that influences our lives at every level, has produced the increased flow of goods, capital, people, knowledge, images, crime, pollutants, drugs, fashion, viruses, and beliefs across territorial and ideological boundaries of all kinds. This course focuses on the role of communication media (radio, television, film, computers) in the processes of globalization and examines the impact of globalization on cultural representations, cultural identity, and international relations. (Prerequisites: CO 130 or IL 10 and junior or senior status) Three credits.

CO 337 Visual Communication

This course provides a broad introduction to the structure, conventions, and effects of visual communication with a theoretical emphasis on media ecology. The first half is devoted to understanding formal properties including examining the basics of vision, techniques for visual persuasion, and the language of cinematography and editing. The second half surveys more controversial issues like digital manipulation and violence and sex in media. Course material and assignments will be drawn from media domains including advertising, photo/video journalism, and video games. Students will read both theoretical contributions to and empirical investigations of the field. (Prerequisite: CO 130) Three credits.

CO 338 Media Audiences

Media Audiences has three related aims: (1) to introduce the theoretical and academic study of media audiences (2) to introduce students to qualitative field research methods and (3) to prepare students to engage with the current media industry through an examination of applied audience research. Recognizing that the study of media audiences is an important theoretical as well as practical endeavor, we will consider how audiences have been studied historically, in the academy, and within media industries. This course meets the US Diversity Requirement. (Prerequisite: CO 130) Three credits.

CO 339 Topics in Media Theory and Criticism

This course provides an opportunity to examine in depth particular media theories or to conduct careful media analysis and criticism. The course emphasizes contemporary theoretical and/or methodological approaches to the close analysis of television, radio, newspaper, the Internet, and/or magazine texts so as to understand the ways meaning is constructed and situated within the larger social context. Topics may include mass media and the public sphere; television criticism; sex, lies, and videos; and children and the media. Students may take CO 339 up to two times with different topics. (Prerequisites: CO 130 and junior or senior status) Three credits.

CO 341 End-of-Life Communication

End-of-Life Communication focuses on the only reality for every human being - death. However, in spite of its certainty, American culture tends to minimize or ignore discussions of death and provides little insight into effective communication strategies for healthcare providers, family members, friends, and lovers. The complexities of this unique communication will be assessed vis-à-vis an applied approach that includes a service-learning opportunity at a 51-bed hospice. In addition, the course will include self-reflection, autoethnography, an exploration of scholarly research in palliative communication, and scholarly interaction between undergraduate students in the classroom and the hospice setting. (Prerequisite: CO 200, CO 220, or instructor approval) Three credits.

CO 342 Technoculture and Information Society

This course explores phenomena, trends, and theories related to emerging information and communication technologies (ICTs), as well as relationships among those technologies, socio-economic structures, "old" media institutions, media users, and culture. Through a combination of theoretical and practical explorations that emphasize historical, ethical, and critical thinking, the course introduces students to academic and non-academic perspectives on new media. (Prerequisites: CO 130 and junior or senior status) Three credits.

CO 346 Spirituality and Communication

This course engages a critical understanding of the way in which spirituality is constructed through communication. Using the unique perspectives and empirical tools of the communication discipline, the course seeks to familiarize students with the variety of ways in which spirituality has been studied both within and outside of religion. Examining various contexts that engage spiritual discourses, from interpersonal communication settings to organizational, health and mass mediated settings, students reflect on the potential for spiritual discourses to transform individuals and society, and consider their own participation in such discourses. (Prerequisites: CO 200 and junior or senior status) Three credits.

CO 347 Communication in Healthcare Organizations

This course explores the organizational communication of modern U.S. healthcare organizations, including: Managed Care, Insurers, Healthcare Systems, and Medicare/Medicaid. The primary purposes of this course are to provide an understanding of how communication within, and from healthcare corporations impacts the organization, its employees, the health of its customers and U.S. healthcare delivery. This course will evaluate and explore the multidimensional processes involved in healthcare organizations and how communication is critical to their success or failure and to the health and well-being of their customers. (Prerequisite: CO 248 or instructor approval) Three credits.

CO 348 Risk Communication

Risk Communication examines the communication theories and research that underlie the study of risky behaviors and the development of effective responses to perceived risks. This course provides an understanding of how communication impacts our assessment of risk, critical thinking and policy making about risk prevention and response, and the creation of preventive programs and campaigns. Students will evaluate and explore the multidimensional processes involved in researching and responding to sustained risks or emergency situations, utilize communication theory to develop appropriate campaigns, and assess their success or failure. Topics may focus on health and environmental risks, security, or disaster response. (Prerequisites: ANY of the following: CO 201, CO 230, CO 248 or instructor approval) Three credits.

CO 349 Special Topics: Constructing Social Identities

This course focuses on a specific context where social identities are negotiated through particular discursive practices, emphasizing the verbal and nonverbal communication behaviors that are appropriate in this context and through which people constitute and perform their identities. The course examines symbolic practices and communication norms in families, self-help groups, television talk shows, cyber communities, social movements, and genders/sexualities, using approaches such as symbolic convergence theory, social constructivism, ethnography of communication, and conversational analysis. Students may take CO 349 up to two times with different topics. (Prerequisites: CO 200, CO 240 or instructor approval and junior or senior status) Three credits.

CO 397 Independent Study

This course allows students to thoroughly investigate communication concepts, theories, or issues presented in a previously completed communication course. Independent study does not substitute for any other required course(s) in the communication program and students' investigations must be scholarly in intent. An independent study may be taken at most twice. (Prerequisites: junior or senior status and a communication faculty member's sponsorship) Three credits per semester; six-credit limit.

CO 398/9 Internship

Communication internships provide students with first-hand knowledge about the field of work, allow them to experience new professional activities and relationships, help them apply conceptual knowledge and skills in communication in the work environment, and allow them to experience the problems and successes of efficiently and effectively communicating within a complex organization. One three-credit internship course can be used toward the major. Students may take an internship twice for credit, one to three credits per semester. (Prerequisites: 2.8 overall GPA and junior or senior status) One to three credits per semester; six-credit limit.

Program in Computer Science

Faculty

Associate Professor

Spoerri, director

Computational thinking and processes permeate our daily lives, revolutionizing our understanding of the natural world, our tools, and of ourselves. Knowledge of computer science has become highly valued in such diverse fields as psychology, biology, and even philosophy. A degree in Computer Science gives one both marketable skills and intellectual breadth that can be applied to any career choice. The Computer Science program is dedicated to giving each student a personal, challenging, and thoroughly enjoyable experience. The Computer Science program offers both a B.S. degree in computer science, a double major in computer science and mathematics, and a minor in computer science that makes a strong addition to one's resume. See the course description for CS 397 to learn about internship possibilities. All degrees are received through the Department of Mathematics and Computer Science. Please contact Dr. Peter Spoerri (spoerri@fairfield.edu) if you have any questions regarding the program.

Course of Study

Major in Computer Science

To earn a B.S. in computer science students complete:

CS 141 Introduction to CS and Programming I

CS 151 Functional Programming

CS 231 Discrete Mathematics

CS 232 Data Structures

SW 201 Software Engineering Methods

CS 342 Theory of Computation

CS 343 Analysis of Algorithms

CR 245/245L Digital Design I with Lab

- One of: CS 353 Principles of Compiler Design CS 354 Theory of Programming Languages
- Two additional 300 level CS courses
- MA 171 Calculus I
- One of: MA 172 Calculus II or an additional 200 or 300 level mathematics course
- One semester of a lab science.

Minor in Computer Science

To earn a minor, students complete:

CS 141 Introduction to CS and Programming I

CS 151 Functional Programming

CS 232 Data Structures

- One of: CR 245/CR 245L Digital Design I with Lab, SW 201 Software Engineering Methods, or an additional 300 level computer science course
- One additional 300 level CS course*

* Math majors may use MA/CS 342 to satisfy this requirement.

Double Major in Computer Science and Mathematics

Students who are interested in receiving a double major in computer science and mathematics should meet with the chair of the department of mathematics and computer science or the director of computer science, in order determine their curriculum.

Course Descriptions

CS/MA 141 Introduction to Computer Science and Programming

This one semester course is designed both for majors and for nonmajors interested to learn to program. No prior programming or computer sciences is assumed, and the student successfully completing this course will be able to design, write and debug programs, and will also be prepared to continue on to Data Structures CS 232 to learn the more sophisticated tools of modern software development. Students will learn to use variables, looping, conditionals, recursion, arrays, functions and procedures. They will incorporate these tools into their code, learning the skills of debugging, top-down design, stepwise refinement, modularization, abstraction, and encapsulation as they do. Students may take this course to satisfy the non-calculus portion of the mathematics core curriculum. Four credits.

CS/MA 151 Functional Programming

This course provides an introduction to the theory and practice of programming in the functional paradigm. Functional programming is based on a view of programs as data and computing as calculation. This approach facilitates the development of programs that are concise, elegant, and free of broad classes of errors. Topics covered will include a broad introduction to computing, symbolic representation of data, recursion, algebraic data types, higher-order functions and type systems. Students will complete the course with both the ability to program and a useful foundation for further study of topics in discrete math, logic, proof, and computer science theory. No prior programming experience is required. Students may take this course to satisfy the non-calculus portion of the mathematics core curriculum. Three credits.

CS/MA 231 Discrete Mathematics

Topics in this course include logic; sets; functions; equivalence relations and partitions; mathematical induction; and countability. Three credits.

CS 232 Data Structures

This course presents problem solving with abstract data types such as lists, linked lists, stacks, queues, graphs, and trees. The close connection between data and algorithms is stressed. (Prerequisite: CS 141, CS 131, or SW 133. Other introductory programming courses such as CS 151 may be substituted with permission of instructor) Three credits.

CS 331 Operating Systems

This course introduces the major system utilities of a general-purpose computer: editors, assemblers, interpreters, linkers, loaders, and compilers. The course then presents the operating system for the computer: command language, access and privacy, management of processes, memory, and input/output devices. (Prerequisite: CS 232) Three credits.

CS/MA 342 Theory of Computation

This course explores what computers can and can't do by examining simple mathematical models of computation. Topics include finite state machines, regular expressions, non-determinism, pushdown automata, context-free grammars, and Turing machines. We will see that there are limits to what computers can do, and in doing so, we will learn about what a computer really is - you might be surprised. This course is also listed as MA 342. (Prerequisite: CS/MA 231) Three credits.

CS 343 (SW 399) Analysis of Algorithms

Like CS 342, this course is interested in how computers can solve problems. When doing a computation, two resources are in great demand - time and memory. If solving a problem takes too much time or too much memory, then it will be very difficult to get an answer. This course looks at how to design algorithms so that they not only solve problems correctly, but do so efficiently, with respect to both time and memory. Topics include algorithm complexity measures, determination of upper bounds and mean performance of algorithms, determination of lower bounds for problems, and NP completeness. (Prerequisite: CS 232) Three credits.

CS 353 Principles of Compiler Design

This course examines the use of language theory and automata theory in the design of compilers and includes symbol table organization, lexical analysis, syntax analysis, and code generation; code generation versus interpretation; and storage management, optimization, and error handling. Students apply learned concepts to the development of a significant part of a compiler. This is the required capstone course for all majors in computer science. (Prerequisites: CS 232, CR 245/CR 245L, and CS 342) Three credits.

CS 354 Theory of Programming Languages

Topics in this course include the design of programming languages; organization, control structures, data structures; run time behavior of programs; and formal specification and analysis of programming languages. The course includes a comparative survey of several significantly different languages. (Prerequisite: CS 232) Three credits.

CS 355 Artificial Intelligence

This course, which examines computer implementation of processes of thought, includes knowledge representation, games, theorem proving, heuristics, symbolic techniques, neural networks, genetic algorithms, and artificial life. (Prerequisite: CS 232) Three credits.

CS 377/MA 377 Numerical Analysis

For course description see MA 377 Numerical Analysis.

CS 397/398 Internship in Computer Science

The internship program provides computer science majors with an opportunity to gain practical, career-related experience in a variety of supervised field settings. Internships can be in any one of a number of areas, such as software applications or hardware applications. Interns spend a minimum of 10 hours per week in on-site work, complete a required academic component specified by a faculty advisor, and satisfy the University Internship Policy requirements (available from the Career Planning Center). Students may register for internships during the summer session and/or one or two semesters and may earn a maximum of six internship credits. (Prerequisites: Senior standing, completed application form, acceptance by the field placement supervisor, and approval by the Department of Mathematics and Computer Science.) An internship may not replace a computer science elective to fulfill the requirement for a major in computer science. One-to-three credits per semester.

CS 399 Independent Study in Computer Science

Independent study provides students with the opportunity to study areas not covered in the undergraduate curriculum. Under the guidance of a faculty member, advanced students examine an aspect in computer science through reading and research. While the study may focus on a software or hardware project, it must incorporate an analysis of written material comparable to other upper-division elective courses. Students must apply to a professor under whose direction they wish to study and obtain the approval of the department chair. This course does not fulfill the computer science elective requirements for majors. Three credits.

Non-Major Course Descriptions

CS 131 Computer Programming I

This course provides an overview of computer organization and hardware, and an introduction to the science and theory of object-oriented programming including top-down structured program design, problem specification and abstraction, algorithms, data structures, documentation, debugging, testing, and maintenance. The course presents programming applications including input/output, selection, repetition, arrays, functions, and procedures. The course, which also addresses the ethical and social issues in computing, emphasizes communication skills in documentation and design of user interface. Three credits.

CS 133 Introduction to C Programming

This course focuses on the use of C language in top-down structured program design. Topics include C data types, functions, and file input/output. The course introduces software engineering as applied to a project such as a database management system. Three credits.

Department of Economics

Faculty

Professors

Buss, Emeritus
Deak, Emeritus
Franceschi
LeClair
Miners
Nantz, *chair*

Associate Professors

Lane
Vasquez-Mazariegos

Assistant Professors

Aksan
Hiller
Murray

Professor of the Practice

Martin

The curriculum of the Department of Economics blends basic economic concepts and their applications with contemporary issues. Courses develop reasoning capacity and analytical ability in students. By focusing on areas of application, students use economic principles to stimulate their powers of interpretation, synthesis, and understanding. The department's individualized counseling encourages majors to tailor their study to career and personal enrichment goals. A major in economics provides an excellent background for employment in the business world while maintaining the objectives of a liberal education. The economics major also prepares students for advanced study in graduate or professional schools.

Requirements

Economics majors are urged to take MA 19 Introduction to Calculus, or MA 121-122 Applied Calculus I-II, or MA 171-172 Calculus I-II to fulfill their core mathematics requirement. Students interested in the bachelor of science degree should take MA 121-122 or MA 171-172, which can be waived with permission of the chair. Students in the BS track must earn a B- average in the intermediate theory sequence.

Course of Study

Bachelor of Arts Degree

With its focus on policy analysis and business applications, this degree is designed for students who plan to enter the job market in business or government, or who plan to study business or law at the graduate level.

For a 30-credit bachelor of arts degree in economics, students complete the following:

EC 11 Introduction to Microeconomics
EC 12 Introduction to Macroeconomics
EC 204 Intermediate Microeconomic Theory
EC 205 Intermediate Macroeconomics Theory
Elective Economics Department courses totaling 18 credits.

No more than three 100-level courses may be counted toward the requirements of the major. Additional 100-level courses may be taken as part of the student's distribution of elective courses.

Bachelor of Science Degree

With its emphasis on quantitative skills and statistical analysis, this degree prepares students for quantitative applications of economic theory as practiced in actuarial work, economic research, or graduate studies in economics. Students who complete this degree are urged to couple it with a minor in mathematics.

For a 33-credit bachelor of science degree in economics, students complete the following:

EC 11 Introduction to Microeconomics
 EC 12 Introduction to Macroeconomics
 EC 204 Intermediate Microeconomic Theory
 EC 204L Intermediate Microeconomics Lab
 EC 205 Intermediate Macroeconomic Theory
 EC 205L Intermediate Macroeconomics Lab
 EC 278 Economic Statistics
 EC 290 Mathematical Economics
 EC 380 Econometrics

Elective Economics Department offerings totaling nine credits.

A grade of C or better is necessary in the required courses for the bachelor of science degree. No more than two 100-level courses may be counted toward the requirements of the major.

Minor in Economics

For a 15-credit minor in economics, students complete the following:

EC 11 Microeconomics
 EC 12 Macroeconomics
 Three elective Economics Department offerings totaling nine credits.

No more than one 100-level economics course may be counted toward the minor.

Course Descriptions

EC 11 Introduction to Microeconomics

This course analyzes the behavior of individual consumers and producers as they deal with the economic problem of allocating scarce resources. The course examines how markets function to establish prices and quantities through supply and demand, how resource costs influence firm supply, and how variations in competition levels affect economic efficiency. Topics may include antitrust policy, the distribution of income, the role of government, and environmental problems. The course includes computer applications. Three credits.

EC 12 Introduction to Macroeconomics

This course develops models of the aggregate economy to determine the level of output, income, prices, and unemployment in an economy. In recognition of the growing importance of global economic activity, these models incorporate the international sector. The course examines and evaluates the role of public economic policy, including fiscal and monetary policy. Topics may include growth theory and price stability. The course includes computer applications. (Prerequisite: EC 11 or permission of the instructor) Three credits.

EC 112 Economic Aspects of Current Social Problems

This course uses a policy-oriented approach to study contemporary economic issues. Topics include government spending, the role of federal budgets in solving national problems, poverty, welfare, social security, population, the limits to growth controversy, pollution, energy, and regulation. Three credits.

EC 114 The Economics of Race, Class, and Gender in the American Workplace

This course examines the impact of race, class, and gender differences on decisions made in households and in the workplace. It begins with an in-depth analysis of labor supply decisions and responsibilities of households, moving to an examination of labor demand decisions and wage-rate determination. The course reviews applications of theoretical predictions as they relate to important public policy issues such as child and elder care, social security, pay equity, the glass ceiling, affirmative action, sexual harassment, and poverty. This course meets the U.S. diversity requirement. Three credits.

EC 120 Environmental Economics

This course, which presents an overview of the theory and empirical practice of economic analysis as it applies to environmental issues, first establishes a relationship between the environment and economics. It then develops the concept of externalities (or market failures) and the importance of property rights before exploring the valuation of non-market goods. It examines the practice of benefit-cost analysis and offers economic solutions to market failures, while highlighting pollution control practices, especially those based on incentives. Throughout, the course examines current issues regarding environmental protection around the globe. This course meets the world diversity requirement. Three credits.

EC 125 Global Competition and Competitiveness

This course identifies and explores the factors that make products, firms, and nations competitive, using a strong international, case study, and group discussion emphasis. The course draws on examples from manufacturing and service activities in Asia, Europe, and North America. Three credits.

EC 130 Haiti: An Economic Perspective

When Jean-Bertrand Aristide ran for president of Haiti in 1990, his primary campaign slogan was, "From misery to poverty with dignity." While poor economically, Haiti is rich in culture, rich in history, and rich in the strength of its people. This course pays special attention to the economic aspects of Haiti's history, its economic development (past and present), and the economic prospects for the future. Topics covered include slavery and the Haitian revolution, the economic sacrifices made to receive international recognition, migration and the Haitian diaspora, micro-lending, and foreign aid initiatives, especially those related to the earthquake of 1/12/2010. Three credits.

EC 140 Health Economics

This course begins by applying microeconomic theory to the health sector of the U.S. economy. The U.S. experience will be generalized to global health issues and alternative health care systems. Topics include the demand for health care and health insurance, managed care and the role of government, physician compensation, and specialty choice, the role of nurses and other healthcare professionals, the hospital sector, and medical cost inflation. Three credits.

EC 152 Economics of Sports

This course develops and examines the tools and concepts of economic analysis as they apply to the sports industry. Topics in professional sports include free agency, salary cap, and new franchises. The course also explores economic issues and institutional structures of sports such as golf and tennis, and the broader industry including the National Collegiate Athletic Association, sports equipment, advertising, minor leagues, and the Olympics. Students gain an increased understanding of how economics affect them through this combination of sports and economics. Three credits.

EC 185 Regional Economic Development

This course includes two key components: a theoretical examination of the basic theories of regional economic development such as growth poles, spillovers, infrastructure requirements, and center-periphery analysis; and an application of these theories to a specific economic issue. Students participate in a comprehensive study of a significant economic issue facing a Connecticut community, in cooperation with a regional agency, resulting in detailed analysis of the issues and potential solutions. Fieldwork is required. Three credits.

EC 204 Intermediate Microeconomic Theory

This course builds upon and expands the theoretical models of EC 11. The course introduces indifference curves to explain consumer behavior; short- and long-run production functions, showing their relationship to product costs; and the efficiency of various competitive market structures. Topics include marginal productivity theory of income distribution, monopoly, and general equilibrium theory. Required for all majors. (Prerequisite: EC 11) Three credits.

EC 204L Intermediate Microeconomic Theory Lab

In this lab, students actively engage in the science of economics. Activities include lectures on mathematical methods, advanced problem-solving projects, collaborative teamwork experiences, and computer simulations. Note: This lab is required of all students pursuing the B.S. in economics; it is optional for students earning the B.A. (Co-requisite: EC 204) One credit.

EC 205 Intermediate Macroeconomic Theory

This course, which includes computer applications, analyzes the determination of national income and output; fiscal and monetary tools; and growth, inflation, and stabilization policies. Required for all majors. (Prerequisite: EC 12) Three credits.

EC 205L Intermediate Macroeconomic Theory Lab

In this lab, students actively engage in the science of economics. Activities include lectures on mathematical methods, advanced problem-solving projects, collaborative teamwork experiences, and computer simulations. Note: This lab is required of all students pursuing the B.S. in economics; it is optional for students earning the B.A. (Co-requisite: EC 205) One credit.

EC 210 Money and Banking

This course covers the commercial banking industry, the money market, Federal Reserve operations and policy making, and monetary theory. (Prerequisite: EC 12) Three credits.

EC 224 Labor Economics and Labor Relations

Nearly 70 percent of income earned in the United States is a return to labor. This course applies the fundamentals of microeconomic and macroeconomic analysis to important decisions that people make in labor markets. From an employee's perspective, questions include: Should I work in exchange for a wage? If so, how much? How will my work affect my lifestyle and family decisions? Should I go to school to improve my skills? From an employer's perspective, questions include: Should I hire workers? If so, how many? How should I pick workers out of a pool of applicants? What techniques should I use to provide incentives for these workers? Many of the answers to these questions require complex analysis and an understanding of

the impact of government policy on the workplace. The course explores a variety of public policy issues such as minimum wage programs, government welfare programs, workplace regulatory requirements, Title IX, immigration, and the union movement. (Prerequisites: EC 11, EC 12) Three credits.

EC 225 Environmental Economics: Tools and Techniques Applied to U.S. Policy

This in-depth examination of the economic tools used in environmental economics and policymaking builds on basic environmental economic concepts and provides the opportunity to put those concepts into practice. The course explores common externalities and market failures in the United States and analyzes governmental policies used to control them. (Prerequisite: EC 11, EC 120, or permission of instructor) Three credits.

EC 230 Comparative Economic Systems

Is communism dead? Is capitalism the only real economic system left? This course explores the various economic systems that are used to distribute resources, i.e., to decide "who gets what" in a nation's economy. The course considers the differences between alternative distribution mechanisms, what it means to transition from one system to another, and how these economic decisions are affected by political and national realities. Because there are so many international alternatives to be explored, each semester focuses on an economic region of the globe - Asia, Eastern Europe and Central Asia, Africa, or Latin America. This course, where appropriate, is available for credit in international studies or area studies programs. (Prerequisites: EC 11, EC 12) Three credits.

EC 231 International Trade

This course covers international trade theory, U.S. commercial policy (tariffs, quotas), common markets, trade of developing nations, balance of payments disequilibria, and multinational enterprises. (Prerequisite: EC 11) Three credits.

EC 233 International Economic Policy and Finance

This course explores international financial relations. Topics include the international monetary system, exchange rate systems, balance of payments adjustment mechanisms, and changes in international finance relations. It treats theoretical concepts and considers governmental policy approaches to the various problems. (Prerequisite: EC 12) Three credits.

EC 235 Economic Development

This course considers the nature and causes of problems facing low-income nations, with a focus on the impact that various economic policies have on promoting economic development. This course meets the world diversity requirement. (Prerequisites: EC 11, EC 12) Three credits.

EC 245 Antitrust and Regulation

This course examines the relationship between government and business, reviewing antitrust laws and cases in terms of their impact on resource efficiency. It develops the format of agency command and control regulation with specific examples from the federal sector. (Prerequisite: EC 11) Three credits.

EC 246 Law and Economics

This course introduces topics from central areas of the common law: property, contracts, torts, and criminal law. The course is intended for students who desire an understanding of the important role of law in modern society or who are considering graduate study in law. It explains the development of the law and legal institutions in terms of the basic tools of economic reasoning. (Prerequisite: EC 11) Three credits.

EC 250 Industrial Organization

Using microeconomic theory, this course examines the economic behavior of firms and industries, identifying factors affecting the competitive structure of markets and using these structural characteristics to evaluate the efficiency of resource use. Topics include mergers, measures of concentration, pricing, entry barriers, technological change, and product development. (Prerequisite: EC 11) Three credits.

EC 252 Urban Economics

This course analyzes the development of modern urban areas by applying the tools of economic analysis to their problems. Topics include transportation, housing, and the provision and financing of public services. (Prerequisites: EC 11, EC 12) Three credits.

EC 265 Distribution of Income and Poverty in America

Students examine various theories of economic justice so that the actual distribution of income in the United States can be analyzed. The course considers factors that cause changes in income distribution and in the number of persons in poverty. This course meets the U.S. diversity requirement. (Prerequisites: EC 11, EC 12) Three credits.

EC 270 Engineering Economics

Engineering projects must be analyzed based upon their technical soundness, but also upon their ability to attract investment dollars in a market economy. This course prepares engineering students to apply microeconomic, finance, and statistical methods as they analyze the economic feasibility of projects. Students will learn about capital budgeting, risk and uncertainty, demand analysis, production and cost modeling, and linear programming. They will apply Excel and other computer-based simulations to analyze data. The goal of the course is ultimately to provide the engineering student with the economic decision-making skills he or she needs to plan, design, and finance engineering projects. (Prerequisite: EC 11) Three credits.

EC 275 Managerial Economics

Students apply economic concepts and theory to the problem of making rational economic decisions. Topics include inventory control, decision-making under risk and uncertainty, capital budgeting, linear programming, product pricing procedures, forecasting, and economic versus accounting concepts of profit and cost. The course includes computer applications. (Prerequisite: EC 11) Three credits.

EC 276 Public Finance

This course examines government expenditure and tax policies with an emphasis on evaluation of expenditures; the structure of federal, state, and local taxes; and the budget as an economic document. (Prerequisites: EC 11, EC 12) Three credits.

EC 278 Statistics

This course introduces students to descriptive statistics, probability theory, discrete and continuous probability distributions, sampling methods, sampling distributions, interval estimation, and hypothesis testing. A weekly lab provides opportunities for active exploration and application of course concepts. (Prerequisites: EC 11, EC 12) Four credits.

EC 290 Mathematical Economics

This course applies mathematical models and concepts to economic problems and issues. Mathematical techniques include calculus and matrix algebra. Economic applications include the areas of consumer theory, theory of the firm, industrial organization, and macroeconomic modeling. (Prerequisites: EC 11, EC 12, and MA 19 or equivalent) Three credits.

EC 298 Independent Study

For economic majors only, this course is open to seniors by invitation or mutual agreement with the instructor. Three credits.

EC 299 Internship

Students, placed in a professional environment by the department, use economic and analytical skills acquired from their courses in a non-academic job setting. Students submit a written assignment detailing their internship experience to a faculty sponsor by the end of the term. (By invitation only) Three credits.

EC 320 Financial Markets and Institutions

Topics include capital markets, financial intermediaries, equities, bonds, options, futures, security analysis, portfolio theory, and the efficient markets hypothesis. Students manage a hypothetical portfolio and use a computer model. (Prerequisite: EC 210) Three credits.

EC 380 Econometrics

This course introduces students to the process used to formulate theories of economic behavior in mathematical terms and to test these theories using statistical methods. The course discusses the technique and limitations of econometric analyses as well as methods available for overcoming data problems in measuring quantitative economic relationships. (Prerequisites: EC 11, EC 12, and EC 278) Three credits.

EC 398 Senior Seminar

Limited to senior majors in economics, this seminar seeks to familiarize participants with recent developments in the discipline and sharpen research skills. Students complete a research project concerning a topic of their choice. The course includes computer applications. (Prerequisite: permission of the instructor) Three credits.

The Educational Studies and Teacher Preparation Department, located in the Graduate School of Education and Allied Professions (GSEAP), in close collaboration with the College of Arts and Sciences, offers a minor in Educational Studies open to all interested undergraduates, a Five-Year Integrated Bachelor's-Master's degree & Teacher Certification Program, and an undergraduate teacher certification program in K-12 music education. Candidates are advised by the faculty advisors in their majors and by faculty in the Department of Educational Studies and Teacher Preparation. Decisions for formal admission to the minor in educational studies and the undergraduate teacher education programs are made on a rolling basis between September and May. Admission information sessions for the minor in educational studies and the teacher education program are offered each semester, and the faculty of the Educational Studies and Teacher Preparation Department are available for individual advising by appointment throughout the year.

The Minor in Educational Studies

The minor in educational studies provides an expanded opportunity for Fairfield University undergraduates to incorporate the study of education into their undergraduate living and learning experiences, whether as prospective teachers or as prospective citizens, or to enhance their preparation as policy makers, practicing professionals or scholars in other fields.

Requirements

The minor in educational studies, open to any interested undergraduate student, has the following requirements:

- Apply for and be admitted to the minor
 - Complete *15 credits as follows:
 - a. ED 200 Explorations in Education: Teaching, Learning and Schooling (USD)
 - b. ED 241 Educational Psychology
 - c. ED 329 Philosophy of Education: An Introduction
-

- d. Choose one course from these recommended diversity courses
- EC 114 Economics of Race, Class & Gender in the American Workplace (USD)
 - EN 172 Literacy and Language (USD)
 - EN 114/FR 295 Caribbean Literature: History, Culture and Identity (WD)
 - NS 112 Healthcare Delivery Systems (USD)
 - MU 101 The History of Jazz (USD)
 - MU 112 The Music of Black Americans (USD)
 - MU 122 World Music History and Ensemble (WD)
 - SO 162 Race, Gender and Ethnic Relations (USD)
 - SP 359 Culture, Civilization & Literature in the Spanish-American Caribbean Region (WD)
- e. Relevant cognate area course: Choose one course from recommended list below (must differ from your diversity course choice)
- BI 18 Human Biology: Form and Function
 - BI 70 Science, Technology, and Society
 - BI 75 Ecology and Society
 - CH 007 Introduction to Forensic Science
 - CH 11 General Inorganic Chemistry I
 - CH 33 Chemistry of Nutrition
 - CH 85 Chemistry, Energy, and the Environment
 - CH 86 Chemistry and Art
 - CO 101 Argument and Advocacy (Wills' sections)
 - CO 130 Mass Media and Society (Service Learning section only)
 - EC 114 Economics of Race, Class & Gender in the American Workplace
 - EN 172 Literacy and Language
 - EN 373 Literature for Young Adults
 - ENW 311 Advanced Composition for Teachers
 - EN 114/FR 295 Caribbean Literature: History, Culture and Identity
 - LAC 300 Justice and the Developing World
 - MU 101 The History of Jazz
 - MU 112 The Music of Black Americans
 - MU 122 World Music History and Ensemble
 - NS 112 Healthcare Delivery Systems
 - PJ 298 Internship in Advocacy and Community Organizing
 - PO 115 Introduction to the Study of Peace and Justice
 - PS 71 Physics of Light and Color
 - PS 76 Physics of Sound and Music
 - PS 77 The Science and Technology of War and Peace - The Way Things Work
 - PS 89 Physics of Sports
 - PS 93 Energy and Environment
 - PY 212 Developmental Psychology for Majors with Lab
 - RS 252 Contemporary Moral Problems
 - SO 162 Race, Gender and Ethnic Relations
 - SO 165 Race, Cities and Poverty
 - SO 185 Introduction to International Migration
 - SP 359 Culture, Civilization & Literature in the Spanish-American Caribbean Region

Students pursuing teaching certification must also take a 3-credit US History course covering 50 years or more of US history. Note: Biology majors and minors may use any upper-division 200 and 300 level Biology lab course to satisfy the cognate course for the minor in educational studies. *Certain courses taken to fulfill the minor in educational studies may be used to fulfill requirements for the undergraduate core and US or World diversity requirements. Some may also be used to fulfill requirements for a major.

Teacher Education

Candidates interested in pursuing certification to teach Elementary Education (K-6) or Secondary Education (7-12) can do so through one of two 5-year Bachelor's- Master's Programs in Teacher Education. The Teacher Education Programs prepare scholar-practitioners who have the knowledge, skills, and dispositions to enact meaningful connections between theory and practice, promote a developmental model of human growth and learning, exercise ethical professional judgment and leadership, and advocate for quality education for all learners. As members of an inclusive community of learners, we (university faculty, experienced and aspiring classroom teachers, and community members and leaders) work together to create and sustain exemplary learning environments that empower P-12 students to become engaged, productive citizens in their communities. Across all programs, our foci for inquiry and action include the socio-cultural and political contexts of education and schooling, the complexities of teaching and learning, teacher work and professional cultures, culturally relevant understandings of human growth and development, and socially responsible uses of technology in schooling and society.

Descriptions of all the required education undergraduate and graduate courses are found in the GSEAP catalog. Descriptions of undergraduate courses are found under appropriate departmental course listings.

Program Description

To be admitted to the Five-Year Integrated Bachelors- Masters degree teacher education programs, students must first declare the minor in Educational Studies; successfully earn 45 undergraduate credits, maintain a minimum GPA of 2.67, have a minimum GPA of 3.0 in their major, and must submit an online application to the Fairfield University graduate admissions office, specifying which teacher education track they are pursuing, and the date of their anticipated completion of undergraduate degree. The application can be found at https://app.applyyourself.com/AYApplicantLogin/fl_ApplicantConnectLogin.asp?id=fairfieldg

Candidates will also need to be fingerprinted, provide references, a resume, an essay, transcript, record of immunizations, a passing score or waiver from the PRAXIS I examination, and be interviewed before an admission decision is made. Further information is available from graduate admissions, and from the director of the Undergraduate Education Programs. Complete information about the PRAXIS I exam and waivers can be found at <http://www.sde.ct.gov/sde/lib/sde/pdf/cert/praxis/praxiswaivercriteria.pdf>

Students seeking certification in Secondary Education must maintain at least a B (3.0) average in the relevant content area courses in order to pursue the 5th year.

In view of the teacher's role in the school and community, candidates whose relevant academic productivity is marginal or inadequate, who do not embody a socially responsible professional disposition, or who demonstrate unsuitable personal qualities, will not be recommended for continuation in the teacher preparation program, student teaching placement, or state certification. In addition, all prospective and admitted candidates to an undergraduate teacher education program are expected to demonstrate the personal and professional dispositions that are embodied in the Mission Statement of the Graduate School of Education and Allied Professions and outlined in the ethical codes of their chosen profession.

Background Check and Fingerprinting

In compliance with Connecticut state law effective July 1, 2010, applicants whose programs of study will require participation in school-based field experiences (i.e., observations, practica, student teaching, internships, etc.) must undergo state and national criminal history background checks before beginning their program of study. The regional educational service centers (RESCs) that are authorized to conduct fingerprinting services and provide the background check results to the Connecticut State Department of Education and local school districts are listed at www.fairfield.edu/documents/admission/ga_fingerprinting.pdf. University students who have a history of a federal or state conviction may be barred from participating in school-based fieldwork and may be exited from their degree program, depending on the nature of the conviction. Students must present the receipt documenting that they have undergone fingerprinting at a RESC to the GSEAP Dean's office (Canisius 102) prior to course registration.

Course of Study

Course Requirements For The Five-Year Integrated Bachelor's-Master's Degree and Certification Programs

Elementary Certification Program

(57 Credits: 27 undergraduate, 30 graduate)

Undergraduate Courses (21 credits)

ED 200 Explorations in Education: Introduction to Teaching, Learning And Schooling.
ED 241 Educational Psychology
ED 329 Philosophy of Education: An Introduction
ED 350 Special Learners in the Mainstream Classroom
MD 300 Introduction to Educational Technology

Certification in K-12 Music Education

Candidates seeking K-12 music certification should confer with both Dr. Laura Nash and Dr. Patricia Calderwood for further information about the required ED and MU courses for certification. They include, but are not limited to:

MU 363 Music Technology for Music Educators

MU 360 Elementary General Music Methods

MU 361 Choral Conducting Methods, and

MU 362 Secondary Instrumental Methods.

Music candidates must also complete an Instrumental Practicum.

Academic Advisement Note

Teacher education candidates should seek academic advisement from the advisor for education certification in their major and an educator advisor to insure that planned program requirements are fulfilled for their major and core requirements, educational studies minor, and their teacher education program.

Minority Teacher Incentive Grants

The Minority Teacher Incentive Grant Program provides up to \$5,000 a year for two years of full time study in a teacher preparation program - usually junior or senior year, as long as you are an admitted education minor and complete all the requirements.

As an added bonus, you may receive up to \$2,500 a year, for up to four years, to help pay off college loans if you teach in a Connecticut public elementary or secondary school. To qualify, you must be a full-time college junior or senior of African-American, Hispanic/Latino, Asian-American, or Native American heritage, and be nominated by the chair of the Educational Studies and Teacher Preparation Department. To apply, obtain a nomination form from www.ctdhe.org/mtigp.htm.

For Candidates seeking secondary certification concurrent with their undergraduate degree see page 109 of the Fairfield University 2010-2011 Undergraduate Catalog. This option is available for students graduating by May 2014.

Course Descriptions

Undergraduate Teacher Education Course Descriptions

ED 200 Explorations in Education: Introduction to Teaching, Learning and Schooling

In this course, students/candidates discover how education is accomplished in schools through the social construction of teaching and learning. Through participant observation, service learning, reflections, assigned readings, class discussions and collaboration, candidates contribute positively to student learning in local schools and communities with diverse (socioeconomic, linguistic, race/ethnicity) populations, understand the complexities of schooling from multiple insider perspectives, and engage in the process of discerning whether to pursue a career in education. Successful completion of this course is one of the prerequisites for admission to the teacher education program. The course is open to all interested students. Approximately 25 hours of service in a local school is required. This courses meets the U. S. diversity requirement. Three credits.

ED 241 Educational Psychology

This course considers a particular application of the more important psychological principles to educational theory and practice, embracing a systematic study of the educable being, habit formation, phases of learning, intellectual and emotional growth, and character formation. The course, which includes a 15-hour field experience in an approved, ethnically diverse public school setting, also examines individual differences, transfer of training, interest, attention, and motivation insofar as they influence the teaching process. Three credits.

ED 329 Philosophy of Education: An Introduction

This course applies the basic concepts of philosophy to education in general and to contemporary education theory in particular to acquaint educators with philosophical terminology, to improve the clarity of their thinking, and to encourage personal commitment to their own life philosophies. It also provides the opportunity to ask fundamental questions about the aims and purposes of education and schooling in a multicultural democratic society; the ethical dimensions of the teaching/learning relationship; the effects of poverty and injustice on the lives of young people, their families and communities; and the roam of the imagination in transforming the world. A range of philosophical perspectives will be explored including Jesuit Education/Ignatian Pedagogy, Deweyan Progressive education, and Freirian Critical Pedagogy. This course includes a 20-hour service learning experience in an approved, ethnically diverse school setting. Three credits.

ED 350 Special Learners in the Mainstream

This course familiarizes the mainstream professional with the special learning needs of children and youth with intellectual and developmental disabilities, learning disabilities, emotional disturbances, severe disabilities, multiple disabilities, and those who are gifted and talented. Topics include methods of identifying and working effectively with children and youth with special learning needs in the regular classroom; the roles and responsibilities of counselors, psychologists, educators, and ancillary personnel as members of a multidisciplinary team in planning educational services for exceptional learners; and laws that impact on assessment, placement, parent and student rights, and support services. This course may require a fieldwork component as part of the evaluation process. Note: This course is not for those pursuing an initial certificate or cross-endorsement in special education; it is for general educators and students in affiliated fields of study. Three credits.

ED 369 Developmental Reading in the Secondary School

Topics include methods and materials for improving reading and study skills at the secondary level and the application of developmental reading skills in all curriculum areas. Three credits.

MD 300 Introduction to Educational Technology

This course covers the principles and applications of technology literacy in education. Topics include designing effective teaching strategies and environments conducive to learning; application of media and computer technologies in teaching; the use of the Web in teaching K-12; MSOffice applications; developing home pages; evaluating software; and examining new technologies for education. A field experience is included in this course. Lab fee: \$45. Three credits.

Graduate courses available for Undergraduates enrolled in the 5-year Bachelors-Masters Degree programs in Teacher Education

ED 447 Learning Mathematics in the Elementary Classroom

In accordance with the professional standards for teaching mathematics, this course emphasizes the important decisions a teacher makes in teaching: setting goals, selecting or creating a variety of appropriate mathematical tasks, supporting classroom discourse; integrating mathematics across the curriculum; assessing student learning; and creating a supportive classroom environment. During this course, candidates explore the relevance of theory in the classroom. In addition, candidates investigate the development of specific concepts such as computation and geometry in elementary age children. Candidates engage in adult-level mathematics activities designed to increase an understanding of mathematics, examine the latest research on how children learn mathematics, and explore strategies for dealing with diverse learners. Additionally, as socially responsible educators, candidates examine how mathematical practices and teaching methods are influenced by underlying theoretical principles linked to history and the position of the classroom teacher. Course requirements include on-site fieldwork in an elementary school for a minimum of two hours per week during the semester. Three credits.

Additional 400-level and graduate teacher education course listings are available in the GSEAP catalog. If a student has completed all requirements for an undergraduate degree, while an undergraduate, on a space available basis, the student with the permission of the chair of Educational Studies and Teacher Preparation may complete up to two graduate courses for graduate credit.

"What do you read, my lord?"

"Words, words, words."

As Hamlet's reply to Polonius amply indicates, we live in a world of words - written, spoken, read, recited, analyzed, debated. In the English Department, students learn to appreciate the inherent value of reading and writing, to value the beauty and power of language. At the same time, our students are trained to sharpen their skills for an ever-competitive job market by developing the ability to write clearly and persuasively, to think critically and creatively, and to engage in thoughtful analysis, skills that are essential to success in our contemporary, global marketplace.

While there are many ways to pursue English studies, we have some basic goals that apply to all of our many, varied programs. Our goals include:

- To foster students' abilities to reflect on texts as global citizens and as members of an academic community;
- To impart to students a sense of the history of English language and literature, in its local, national, and transnational forms, as well as their interconnections;
- To teach skills in close reading, textual analysis, thesis development, and argumentation;
- To acquaint students with various types of imaginative literature such as the novel, the short story, poetry, and drama;
- To develop students' analytic and organizational skills through the interpretation of literature and through their own writing;
- To give students further training in the organization and effective articulation of ideas in writing, including in some cases preparation for careers as professional writers or for careers where strong writing skills will be an asset;
- To give students an appreciation of the value of the writing process, including revision;
- To provide a variety of writing experiences, including the application of research methods;
- To address issues such as literacy studies, using new media for composing or reception of text, and training teachers for the language arts.

Requirements

The English curriculum was updated in Spring 2010 to better serve our students. Students declaring the major or minor after September 1, 2010, follow the guidelines in this section. Students declaring the major or minor before September 1, 2010, have the option of following these guidelines or following the previous guidelines outlined in the English section of the University's online catalog. (http://www.fairfield.edu/documents/academic/aca_undercat10.pdf)

English Major

There are many different ways to pursue an English major, based on students' interests and career goals.

- Students must first complete the EN 11-12 core curriculum sequence; all of the requirements below are in addition to EN 11-12.
- All English majors complete the department core curriculum of five EN literature classes beyond EN 11-12; the five EN literature courses can include the literature course taken as part of the core curriculum.
- All English majors complete a concentration of five additional courses. All concentrations include at least one EN/W writing class (other than Internship or Independent Study) and a capstone experience; students develop the concentration in consultation with their department academic adviser.

Department Core Courses

Given the large number of literature courses, students have considerable freedom to pick classes that will both interest them and benefit them in terms of education and career plans.

After completing EN11-12, most majors begin the program by taking a 100-level literature class that also counts as their final English core course. With instructor permission, they can take a 200-level lit course instead of the 100-level. Students can use only one 100-level course to fulfill the requirements of the English major. They then take four additional literature courses at the 200 or 300 levels. At least one course must be at the 300 level.

Of the five literature courses in the department core curriculum, at least two must be centered in the years before 1800 and at least one must be centered in the years after 1800. The historical period is listed as follows in the catalog: A (before 1800) and B (after 1800). The historical period also appears in the online description of literature courses (http://www.fairfield.edu/cas/eng_courses.html).

The Concentrations

All English majors also complete one of the Department's six concentrations. The coursework is in addition to the university core and 16 department core courses. The concentrations are:

- Literature
- Creative Writing
- Journalism
- Professional Writing
- Teacher Education
- English Studies

All concentrations include at least one EN/W writing course (not including Internship or Independent Study) and a capstone experience. Students are allowed to complete more than one concentration; the second concentration will be listed as an academic minor on a student's transcript for graduation.

Course of Study

Concentration in Literature

The Literature concentration is designed for students interested in a challenging and stimulating study of literature and culture. This concentration promotes a theoretical and interdisciplinary approach that moves beyond national and canonical boundaries. Students learn to interpret texts within the socio/historical contexts of their production and reception. They will acquire knowledge in a number of theoretical frameworks to develop this approach (e.g., historical materialism, post structuralism, feminist theory, postcolonial studies, queer studies, race and ethnic studies, science studies, and critical theory). Students completing the concentration are able to offer a historically grounded and rigorous critique of global formations that structure literature, culture, and the self. The concentration is especially useful in preparing students for graduate or professional school.

The requirements for the Literature concentration include:

Introductory Courses

Students take one of the following:

EN 351 Literary Theory

EN 352 Cultural Studies

Specialized Courses

Students take all of the following:

One EN course at the 200 or 300 level

One EN/W course

One EN course cross-listed with an Interdisciplinary Program (e.g., Program on the Environment, The Program in Peace and Justice Studies, Latin American and Caribbean Studies, Women, Gender, and Sexuality Studies)

Capstone Experience

Students take the capstone course for the Literature and Cultural Studies concentration, a faculty-guided research project that produces a 20-page paper.

Concentration in Creative Writing

The concentration in creative writing is designed for students committed to becoming fiction writers, poets, or non-fiction writers, and for students who want to pursue a career in the field of publishing or editing. Recent students have had their work published in national literary magazines such as *Quarterly West*, *Indiana Review*, *The Spoon River Poetry Review*, and *Writer's Forum* and have interned at magazines such as *The New Yorker* and *Cosmopolitan* and publishers such as Greenwood Press, Harper-Collins, and St. Martin's. Students can also, with permission of the editor, receive academic credit for working on the University's national literary magazine, *Dogwood: A Journal of Poetry and Prose*.

The requirements for the creative writing concentration include:

Introductory Courses

Students take two of the following:

EN/W 200 Creative Writing

EN/W 202 Creative Writing: Poetry I

EN/W 205 Creative Writing: Fiction I

EN/W 206 Creative Writing: Non-Fiction I

Specialized Courses

Students take at least one of the following:

EN/W 204 Creative Writing: Drama

EN/W 302 Creative Writing: Poetry II

EN/W 305 Creative Writing: Fiction II

EN/W 306 Creative Writing: Non-Fiction II

EN/W 340 The World of Publishing I

EN/W 341 The World of Publishing II

Capstone Experience

Students take at least one of the following:

- EN/W 345/6 Internship
- EN/W 347/8 Independent Writing Project
- EN/W 398 Publishing Practicum

Students must also complete a fifth EN/W course of their own choosing.

Concentration in Journalism

The journalism concentration is designed for students interested in strengthening their news gathering, reporting, and writing skills. Many students in this concentration pursue careers as writers, editors, and reporters at web sites, newspapers, magazines, radio/television stations, web sites, and marketing and publishing companies. Students interested in careers in public relations and marketing especially find it useful.

The requirements for the journalism concentration include:

Introductory Courses

Students take the following two courses, in sequence:

- EN/W 220 News Writing (may be taken simultaneously with EN 12)
- EN/W 221 Digital Journalism (does not have to be taken immediately after EN/W 220)

Specialized Courses

Students take at least one of the following:

- EN/W 222 Journalism Editing and Design
- EN/W 320 Writing the Feature Story
- EN/W 323 Photojournalism
- EN/W 327 Photojournalism II: Documenting The Community
- EN/W 329 Issues in News Writing
- EN/W 330 Literary Journalism
- EN/W 340 The World of Publishing

Capstone Experience

Students take at least one of the following:

- EN/W 345/6 Internship
- EN/W 397 Journalism Practicum

Students must also complete a fifth EN/W course of their own choosing.

Concentration in Professional Writing

The professional writing concentration is designed for students who want to strengthen their writing and speaking skills as preparation for careers in business, the non-profit sector, legal studies, government, public relations, fundraising, politics, or education. Courses in this concentration focus on using writing and communication to make information accessible, usable, and relevant to a variety of audiences. Internships are available to students in the professional writing concentration, including placements in corporate communication, grant writing, advertising, marketing, technical writing, and the mass media.

The requirements for the professional writing concentration include:

Introductory Course

Students are required to take the following course:

- EN/W 332 Business Writing
-

Specialized Courses

Students take at least two of the following:

- EN/W 214 Professional Presentations: Writing and Delivery
- EN/W 222 Journalism Editing and Design
- EN/W 317 Traditional and Structural Grammar
- EN/W 335 Technical Writing
- EN/W 336 Issues in Professional Writing (e.g., Writing for Public Relations)
- EN/W 338 Persuasive Writing
- EN/W 339 Grant and Proposal Writing

Capstone Experience

Students are required to take the following course:

- EN/W 345/6 English Internship

Students must also complete a fifth EN/W course of their own choosing.

Concentration in Teacher Education

This concentration is designed for students who want to prepare for careers teaching English in elementary or secondary schools, or as specialists in the teaching of English to speakers of other languages [TESOL]. It prepares students with the content knowledge needed for successful student teaching, the Praxis exams, and a career in teaching. Qualified students who minor or major in the Education concentration in the English Department are given preferred admission status in graduate programs in Elementary, Secondary, and TESOL education. This concentration is designed both for students who plan to enroll in the joint B.A./M.A. program in teacher preparation which leads to a Master's degree and eligibility for teacher certification and for students who seek other kinds of teaching careers. [See pg. 121 for information about the joint B.A./M.A. Program in Education.]

The requirements for the teacher education concentration include:

Required Courses

- EN/W 311 Advanced Composition for Teachers
- EN/W 317 Teaching and Learning Grammar
- EN 141, 213, or 214 [any course on Shakespeare]
- EN 200- or 300-level course in American literature
- EN 200- or 300-level course in British literature

Recommended Courses

Students are encouraged to take one or more of the following:

- A course on African American literature (e.g. EN 105; 261, 262, 264, 265, 284)
- A course on Latino/a literature (e.g. EN 282)
- A course on world literature (e.g. EN 102, 111, 113, 114; 274; 375)
- EN 172 Literacy and Language
- EN 292 Contemporary Children's Literature
- EN/W 290 Writing and Responding

[The EN courses listed above also may be used as Department Core courses.]

Capstone Experience

Students who enroll in the joint B.A./M.A. program take their capstone course at the end of the M.A. program. Students who do not enroll in the joint B.A./M.A program take an Independent Study, a faculty-guided research project that produces a 20-page paper.

Concentration in English Studies

Students create their own concentration in consultation with a faculty adviser. Such students might put together a coherent package of literature courses of their own choosing, mix and match writing courses in different concentrations, or combine relevant literature and writing course work. All department core requirements must still be met; at least one course must be in writing (other than Internship or Independent Study).

Capstone Experience

Students take at least one of the following:

EN/W 345/6 Internship

An Independent Study in either literature or writing

English Minor

English minors must take four EN or EN/W courses at the 200- or 300-level beyond EN 12. Only one EN 100-level course will count toward the minor. Note: Students may complete a concentration for a minor in English.

Course Descriptions**Introductory Core Courses**

Students gain experience with college reading and writing strategies, including the processes of invention, revision, editing, and publication. They practice inquiry, reflection, critical thinking, and argumentation through the reading and composing of increasingly complex texts across a range of academic and literary genres and audiences. Students gain experience with academic research projects and make connections to writing across the Core Curriculum and prepare portfolios to demonstrate their development as writers and thinkers.

EN 11 Texts and Contexts I: Writing As Craft and Inquiry

This course engages students in the academic life by introducing them to the many kinds of reading and writing they will do across the curriculum and beyond. Students learn to draft, revise, and edit their own texts and respond effectively to the texts of their peers. EN 11 offers practice with writing & reading assignments that call on different contexts (purposes, audiences, forms or modes). Through the careful use of primary and secondary sources, students will foster their academic curiosities, practice reflection, and read deeply to join the conversation of ideas. Designated sections may have specific themes and/or meet the U.S. or world diversity requirement. Three credits.

EN 12 Texts and Contexts II: Writing About Literature

English 12 builds on the reading, writing, and critical inquiry work of English 11, focusing on the development of increasingly sophisticated reading, writing, researching and inquiry skills through the exploration of literary texts and their contexts. Students will practice close reading techniques, be introduced to key terms and concepts in literary study, and practice writing in a variety of academic and creative genres. The course is intended to foster greater appreciation for the power of literature and literary study as a foundation to all the liberal arts. (Prerequisite: EN 11 or its equivalent). Designated sections may meet the U.S. or world diversity requirement. Three credits.

Literature Courses

The 100-level courses are introductory classes appropriate for the University Core Curriculum requirement for non-majors and as the first literature course for majors. If students identify a 200-level or 300-level literature course that they wish to take instead of a 100-level course to fulfill the University Core Curriculum requirement, they can request permission from the instructor to take that course instead. Students are required to have completed the EN 11-12 requirement to register for 100-level EN courses.

(Note on Special Topics Courses: Under the title of "Special Topics," a literature course can be offered once before it is reviewed for final acceptance into the Fairfield University Undergraduate Course Catalog. Each such course will correspond to a specific curricular area and have a course number that ends with a zero. For example, since literature courses from EN 210 to EN 219 are listed as "British surveys," any Special Topics course in British Surveys would be listed as 210. These "Special Topics" literature courses satisfy the requirements for the major, minor, and concentrations. Students can take a Special Topics course more than once as long as it has a different description after the EN number.)

A = Literature before 1800

B = Literature after 1800

EN 101 Introduction to Literary and Cultural Studies

This course allows students to develop ways of reading, analyzing, and interacting with texts in English from around the globe. You will focus on such questions as: How are literary texts produced? How do local, national, and global cultures and events affect the way authors fashion their texts? Do literary works produced in different cultures at the same time "speak to each other" across time and space? The course will be run as a combination of lecture and small group discussion and will make use of web-based background materials to provide context and depth to the readings. This course meets the world diversity requirement. Three credits. (B)

EN 102 Introduction to Contemporary World Literature

Students will review recent fiction from around the world, including Africa, Latin America, the Caribbean, New Zealand, and the Middle East. Students learn strategies for comparing stories and narrative styles from different cultures, subject positions, and sociopolitical frameworks. Students develop a stronger awareness of different types of subjectivity in a global context. The course is suitable for non-majors seeking to fulfill the world diversity and English core requirements, and for English majors who have not yet taken more than one course beyond EN 11 and EN 12. This course meets the world diversity requirement. Formerly EN 263. Three credits. (B)

EN 103 Fairy Tales

A study of classic fairy tales in their oldest preserved versions by authors like Charles Perrault and the Brothers Grimm; in nineteenth- and twentieth-century literature influenced by the fairy tale tradition; in post-modern literary retellings; and in film and popular culture. The class leads to the production of a term paper involving research in primary sources and literary and folklore criticism. Three credits. (B)

EN 105 African Diaspora: Literature and Culture

This course offers an interdisciplinary introduction to the African Diaspora, incorporating texts from Africa, the Caribbean, North America, and Europe. Beginning with colonization in Africa and representations of the Middle Passage, the course covers historical topics such as enslavement and the plantation system, abolition movements, migration within and out of the Caribbean, resistance movements, the Harlem Renaissance, and independence struggles. As we study the Atlantic world and globalization across several centuries, we will examine cultural syncretism, commodity culture rooted in the Triangle Trade, and creative endeavors in literature and the arts (painting and sculpture, film, music, dance, theatre). Three credits. (B)

EN 106/CL 103 Masterpieces of Greek Literature in English Translation

See CL 103 for course description. Formerly EN 203. Three credits. (A)

EN 107/CL 104 Masterpieces of Roman Literature in English Translation

See CL 104 for course description. Formerly EN 204. Three credits. (A)

EN 108/CL 121 Myth in Classical Literature

See CL 121 for course description. Formerly EN 221. Three credits. (A)

EN 109/CL 122 Greek Tragedy in English Translation

See CL 122 for course description. Formerly EN 222. Three credits. (A)

EN 110 Major Works of European Literature

This course surveys major works of world literature from ancient times to the present. Because the works are chosen from a broad span of cultures and periods, the course focuses on the function of literature: What kinds of stories do people tell about their societies? What are their major concerns, and how are these represented in fiction? How can we compare stories from one culture or period with those from another? The course discusses genre and style as well as content. Texts may include the *Epic of Gilgamesh*, as well as works by Boccaccio, Marguerite de Navarre, Madame de Lafayette, and Gabriel García Márquez. Formerly EN 265. Three credits. (A)

EN 111 International Short Fiction

This course examines works of short fiction from around the world written during the twentieth and twenty-first centuries. The degree to which - and the specific manners in which - these works contribute to a characteristically modern sense of human existence and the function of narrative art forms the basis for reading selections. Through textual analysis, students compare and contrast various versions of the modern experience as produced by authors such as Gogol, Melville, Mansfield, Joyce, Lawrence, Cather, Tolstoy, Chekhov, Kafka, Hemingway, Lessing, Borges, Barth, Böll, Mishima, Achebe, Erdrich, and Atwood. Formerly EN 285. Three credits. (B)

EN 112 19th-Century Russian Novel and World Literature

This comparative study of major Russian authors and their counterparts in France, Germany, England, and the U.S. begins with short fiction and moves to novels such as *Père Goriot*, *Crime and Punishment*, *A Hero of Our Time*, and *Madame Bovary*. Russian writers include Pushkin, Lermontov, Dostoevsky, Turgenev, and Tolstoy. Topics include the role of marriage and attitudes towards the family, urban versus rural experience - especially the role of the city, the fantastic in literature, narrative technique, and the development of 19th-century fiction. Formerly EN 266. Three credits. (B)

EN 113 Literature of the Holocaust

After an introduction to the historical, political, and social backgrounds of the Holocaust, this course investigates through literature the systematic genocide of Jews and other groups by Germany (1933-1945). The course seeks to discover how the Holocaust came about and what it means now to our understanding of human nature and of our civilization. Readings and films include Appelfeld's *Badenheim*, 1939, Weisel's *Night*, Borowski's *Survival in Auschwitz*, Epstein's *King of the Jews*, Ozick's *The Shawl*, and Speigelman's *Maus*. Formerly EN 290. Three credits. (B)

EN 114/FR 295 Caribbean Literature: History, Culture, and Identity

See FR 295 for description. Formerly EN 295. This course meets the world diversity requirement. Three credits. (B)

EN 115/IT 289 Dante

See IT 289 for course description. Formerly EN 257. Three credits. (A)

EN 116/IT 262 Rome in the Cultural Imagination

See IT 262 for course description. Three credits. (A)

EN 117/FR 260 Sub-Saharan African Culture

See FR 260 for course description. Three credits. (B)

EN 118/CI 250 Modern China through Fiction and Film

See CI 250 for course description. Three credits. (B)

EN 119/CI 252 The City in Modern China

See CI 252 for course description. Three credits. (B)

EN 120/TA 123 American Women Playwrights

See TA 123 for course description. Three credits. (B)

EN 121 American Literature and the Environment

This course aims to explore the ways in which ideas about the physical, "natural" environment have been shaped in American literature. The course will survey a variety of important texts in this tradition and introduce students to the scholarly perspective known as "Ecocriticism." Texts may include those by Austin, Cather, Leopold, Muir, Silko, Thoreau. Formerly EN 274. Three credits. (B)

EN 122 The Frontier in American Literature

For the last five centuries, the frontier - understood as the place where humanity comes into contact with its apparent absence in the shape of alien beings and landscapes - has been the subject of some of the most lasting and powerful American stories. In this course, students concentrate on some of the major representations of the frontier produced between the 1820s and the present to learn how to recognize and talk about the position that the American western has occupied in our culture. Authors include Cooper, Twain, Cather, and McCarthy; filmmakers include Ford, Peckinpah, and Eastwood. Formerly EN 271. Three credits. (B)

EN 123 Ethnic American Literature

This course focuses on stories from writers whose countries came in contact with American colonization. The course examines postcolonial themes in a historical context, and asks what it means to be a writer whose identity is formed by the diasporic flight of one's people. We begin with theorizing postcoloniality and move to a study of 20th century writing by Puerto Rican, Filipino, Vietnamese, and other ethnic American writers. Topics include the influences of English on vernacular literatures and the relationship of the postcolonial to contemporary politics and art. Three credits. (B)

EN 124 American Literature: Myths and Legends

Our national literary tradition has been defined by the stories we tell about ourselves and our conversations about important social and political issues, including race, reform, democracy, suffrage, Native American removal, class, technology, and Manifest Destiny. This course explores how literature reflects, constructs, and questions the dominant image and understanding of the American identity from the Puritans through the nineteenth century. The course leads to developing a term paper drawing on research and using literary criticism. Writers include Bradstreet, Franklin, Wheatley, Irving, Douglass, Poe, Whitman, Dickinson, James, and Twain. Formerly EN 270. Three credits. (B)

EN 125/TA 120 American Drama

See TA 120 for course description. Formerly EN 264. This course meets the U.S. diversity requirement. Three credits. (B)

EN 126 American Social Protest Literature

This course explores the long tradition of non-violent social protest in American literature. We examine how many writers have challenged their contemporaries to become aware of important issues - race, women's rights, Native American activism, the environment, war, and poverty. Students keep a journal in which they reflect on the literature and develop strategies for changing themselves and the world around them. A final project asks students to consider ways to raise awareness about a social issue at the University or in the larger community. Selected writers include Stowe, Davis, Thoreau, Crane, Douglass, Steinbeck, King, Wright, and Ginsberg. Formerly EN 277. Three credits. (B)

EN 127/CL 127 Romantic Love in Greek and Roman Literature

The course of true love never did run smooth. From Homer's Penelope to Ovid's *Remedies of Love* we will examine the permutations of romantic desire and its frustrations in the literature of Greece and Rome. Readings also include selections from Sappho's poetry, Sophocles' *Women of Trachis*, Euripides' *Phaedra* and *Medea*, comedies by Menander and Terence, Catullus' poems to Lesbia, Vergil's tale of Dido and Aeneas, selections from the elegies of Tibullus, Sulpicia, Propertius and Ovid, and briefer excerpts from other authors. All readings are in English translation. Three credits. (A)

EN 128 Cities in Literature

This course offers a comparative, cross-cultural approach to literature about the city, focusing primarily on fiction from the nineteenth century to the present. Beginning with a novel by Balzac, stories by Gogol' and Dostoevsky, and poetry by Baudelaire and Whitman, we discuss topics including detective narratives, the figure of the flâneur, the country/city dichotomy, the crowd, the metropolis and mental life, and the rise of an urban middle class. In texts by authors such as James Joyce, Edith Wharton, Naguib Mahfouz, Monica Ali, Edward P. Jones, and Paulette Poujol-Oriol, issues surrounding gender, sexuality, race, ethnicity, and citizenship emerge as central topics. Three credits. (B)

EN 129 The American Short Story

The American Short Story covers the rise of this genre form from the early Nineteenth Century beginning with Poe and continues through the realistic/naturalistic periods up through modernist and post-modernist movement through the present. Some of the authors studied include Poe, Hawthorne, Melville, Crane, Twain, Cather, McCullers, Welty, O'Connor, Hemingway, Faulkner, Roth, Updike, O'Brien, Lahiri. (Formerly EN 272) Three credits. (B)

EN 130 Literature by Women: Vision and Revision

This study of transatlantic, post-1800 literature by women will adopt Virginia Woolf's notion that "books continue each other." The course will be anchored in such "touchstone" texts as Jane Austen's *Pride and Prejudice*, Charlotte Brontë's *Jane Eyre*, and Edith Wharton's *The House of Mirth*. Each touchstone work will be grouped with a number of subsequent literary texts responding to and/or revising the earlier work. Readings will reach across centuries and continents. Topics include the social constructions of race, sexuality, gender, class, and beauty, intertextuality, influence, and canon formation. Three credits. (B)

EN 131 Contemporary Women Writers of Color

This course focuses on works by Latinas, Native, Asian American, and African American women writers, as well as moving beyond the borders of the U.S. to include writers from the Americas, emphasizing the decades from the 1970s to the present. We consider the intersectionality of race, ethnicity, gender, sexuality, and socio-economic class, as these contribute to concepts of identity - for both the individual and the community. Authors may include Gloria Anzaldúa, Leslie Marmon Silko, Louise Erdrich, Lan Cao, Nora Okja Keller, Sky Lee, Ana Castillo, Carla Trujillo, Achy Obejas, Loida Maritza Pérez, Danzy Senna, Dorothy West, and Chitra Diakaruni. This course meets the U.S. diversity requirement. Formerly EN 348. Three credits. (B)

EN 132 20th-Century Russian Fiction

In this comparative study, students read works by Russian and Soviet authors in tandem with texts by novelists from Eastern Europe, Asia, and the Americas. From the Silver Age, the course moves to post-Revolutionary fiction and versions of dystopia, considers exile, dislocation, relocation, and dual identity, then examines the effects of the Stalin years, and concludes with contemporary fiction of the post-Soviet era. The course sets the literature with its historical, political, and cultural contexts, incorporating material from the arts, as well. Formerly EN 366. Three credits. (B)

EN 133 The African American Literary Tradition

This survey course examines the development of African American literature from the late eighteenth century to the present, with a focus on issues of literacy, authority, and identity. The course traces this tradition's history from Phillis Wheatley's role in defining American poetry and Olaudah Equiano's *Interesting Narrative*, to the narratives of enslavement by authors such as Harriet Jacobs and Frederick Douglass, to the New Negro Renaissance, the Civil Rights Movement, and contemporary African American fiction and poetry. This course meets the U.S. diversity requirement. Formerly EN 253. Three credits. (B)

EN 141 Imagining Shakespeare

Shakespeare is considered the greatest writer in the English language. This course will investigate how his genius is expressed in comedy, history, tragedy, and romance. We will study how each kind of play influences the others in every part of Shakespeare's career. Plays include *The Taming of the Shrew*, *Richard III*, *A Midsummer Night's Dream*, *Henry IV*, *Twelfth Night*, *Hamlet*, *Othello*, *King Lear*, *The Winter's Tale*, and *The Tempest*. We will take a multimedia approach by analyzing performances as well as text. The history of Shakespeare's era and of his critics will be studied as well. Formerly EN 255. Three credits. (A)

EN 142 Myths & Legends of Ireland & Britain

This course studies the literature of early medieval cultures of Ireland and Great Britain, with special attention to Celtic culture. The course is divided into four parts, focusing on the Irish *Táin Bó Cuailnge*, the Welsh *Mabinogion*, the Latin Christian legends of Celtic saints, and the Old English epic *Beowulf*. Critical issues for discussion include: paganism and Christianity; conceptions of law, kinship, and nationhood; warrior culture and the idea of the hero; the status of art and poetry; orality and literacy; the natural and the supernatural; the construction of gender. Counts towards the minor in Irish Studies. Formerly EN 256. Three credits. (A)

EN 143 The "Greenworld": English Literature and the Environment

A survey of prose, poetry, and drama, EN 143's focus is on the "Greenworld" in early modern English literature. The "Greenworld" encompasses all visions of the natural world - forests, gardens, oceans, caves, parks, animals, etc. - as represented in many different aesthetic forms. Students will be introduced to a number of environmental studies topics, including land dispossession, natural disasters, New World plantations, land stewardship, and animal rights, as these topics appear in literature. Course readings range broadly from Virgil, Montaigne, and Shakespeare to James Cameron's *Avatar*, and from the philosophical transactions of the Royal Society to transcriptions of witchcraft trials. Three credits. (A)

EN 161 Irish Literature

The course studies the deep connections between the literature and history of Ireland from 1800 to the present. Building on EN 11 and 12, it further develops the ability to read literature closely (to analyze and interpret the figurative language and stylistic features of fiction, drama, and poetry) and to write convincingly about the meanings and ideas that such close reading yields. It also adds to this skill by teaching students to recognize and articulate the inherent links between literature, history, and culture - links which are particularly evident in modern Irish writing, and which are revealed through close reading. Formerly EN 279. Three credits. (B)

EN 162 Irish Women Writers

A study of women writers both Anglo and Gaelic, from 19th-century fiction to 20th-century poetry. The course focuses on the cross-cultural differences between these two groups, one privileged, the other marginalized, and perhaps who share only a common language. Besides women's issues - education, emigration, marriage, motherhood, and equality - the themes include the Big House, colonization, the Literary Revival, folklore, theology, the tradition of the storyteller, and the roles of religion and politics in the society. Among the authors to be explored are Maria Edgeworth, Lady Morgan, Somerville and Ross, Elizabeth Bowen, Lady Gregory, Marina Carr, Peig Sayers, Mary Lavin, Edna O'Brien, Eilis Ni Dhuibhne, Eavan Boland, Nuala Ni Dhomhnaill, and Medbh McGuckian. Formerly EN 278. Three credits. (B)

EN 170 Writing the Self: Autobiography

Autobiography holds a special place in its presentation of the writer's self, enlisting the reader's belief in the author's "confession" while crossing the line between fictional work and truth. This course examines autobiography and related genres, including memoir, diaries, and personal essays and considers their purpose: what do these authors reveal about themselves, and why? How much is convention, how much is truth? What impact do race, gender, class, nationhood, and ethnicity have on the construction of identity? Writers may include Franklin, Shepard, Douglass, Barnum, Johnson, Winnemucca, Zitkala-Sa, Malcolm X, Wright, Baldwin, Stein, Walker, and Cisneros. This course meets the U.S. diversity requirement. Formerly EN 362. Three credits. (B)

EN 171 Literature and the Visual Arts

This interdisciplinary course will examine the dynamic relationship between literature and the visual arts. Special attention will be paid to literature written in English during the 19th and 20th centuries - a time when writers and cultural critics were increasingly interested in the visual arts in general (painting, sculpture, photography, film, etc) and the impact of the new mass media in particular. These artists forged a unique and significant relationship between their bodies of work and the visual arts; several of the writers studied worked in the tradition known as "ekphrasis" (e.g., poems "speaking" to a work of art). Writers of focus might include Blake, Poe, the Brownings, the Rossettis, Siddall, Wilde, Wharton, and Larsen. Three credits. (B)

EN 172 Literacy and Language

This course examines the concept of literacy in the United States. Students explore four questions: How did they themselves become literate? How has literacy been defined in US history? How do children learn to write? Why do 30 million American adults have severely limited literacy? Students have the opportunity to put theory into practice by working with young children on literacy and school readiness, through the service-learning component of the course. This course meets the U.S. diversity requirement. Formerly EN 249. Three credits. (B)

200 level Literature Courses

Students must complete the EN 11-12 sequence and a 100-level literature course before enrolling in 200-level literature courses. They also can receive permission of the instructor to take a 200-level literature course without first completing a 100-level course.

Studies in Genre

EN 201 Introduction to Poetry

This course is an introduction to the genre of poetry. It is offered for students with no previous knowledge of poetry, or those who wish to develop and enrich their understanding of the genre. Topics vary in each offering of the course but fit into one or more of the general areas of poetry studies: theories of poetry and poetic production; an examination of a specific poet; surveys focusing on work in historical periods or (trans-)national literatures; studies of critical and prose writings of poets. Formerly EN 260. Three credits.

EN 202 American Poetry

This course surveys a range of significant works of American poetry. It is an introduction to various movements (e.g., transcendentalism or modernism), various schools (e.g., New Formalism), and the turn to a multi-lingual and multi-vocal poetry found in the Harlem Renaissance and Spoken Word movements. The course pays particular attention to form, while grounding understanding of form within a socio-historical context. Readings may range from Walt Whitman, Emily Dickinson, William Carlos Williams, Elizabeth Bishop, Wallace Stevens, Gwendolyn Brooks, Robert Frost, Langston Hughes, Pedro Pietri, Joy Harjo, and others. Formerly EN 342. Three credits. (B)

EN 204 Introduction to the British Novel

An intensive study of the novel as a developing literary form over the first 200 years of its existence, this course considers stylistic and thematic aspects of this earliest or traditional phase of the novel with regard to its historical evolution. Authors may include Aphra Behn, Eliza Haywood, Daniel Defoe, Henry Fielding, Laurence Sterne, Jane Austen, Emily Brontë, and Charles Dickens. Formerly EN 364. Three credits. (A)

EN 207 The Contemporary American Novel

The Contemporary American Novel covers the past 30 years of this genre form. The course introduces the student to on-going developments in the realistic novel as well as post-modernist forms such as magical realism and metafiction, as well as the novel of social criticism. Some of the writers studied include Philip Roth, Marilynne Robinson, Elizabeth Strout, Ann Patchett, Cormac McCarthy, Toni Morrison, Edward P. Jones, Jeffrey Eugenides, Charles Frazier, Jonathan Lethem, Ha Jin. Three credits. (B)

Surveys in British Literature**EN 211 The Age of Chaucer**

A survey of the literature of late-medieval England, focusing on its richest period, the second half of the fourteenth century - the age of Chaucer and his contemporaries. Students will gain access to the Middle English language, and study examples of the main genres of medieval literature, including religious and secular lyric, mystical writing, courtly romance, religious drama, chronicle, and comic narrative. Literature will be considered within its social and historical contexts, with special attention to representations of social order, and challenges to that order, notably the Great Rebellion of 1381. Prerequisite: 100-level English literature class, or permission of instructor. Three credits. (A)

EN 213 Shakespeare I

In the first half of Shakespeare's career, comedy, tragedy, and history plays express both the spirit of the Elizabethan age and their own identities as different genres that reference each other. *A Midsummer Night's Dream*, *Romeo and Juliet*, *Henry IV*, and *Much Ado About Nothing* are among a selection of ten plays that explore dimensions of love, religion, and politics. We learn how critics have approached Shakespeare in many different ways, and how to evaluate and respond to critical opinion. Multimedia presentations show how performance and text combined enrich our understanding of this great writer. Formerly EN 355. Three credits. (A)

EN 214 Shakespeare II

The second half of Shakespeare's career begins with bright Elizabethan comedies(*As You Like It*, *Twelfth Night*) and transitions to the darker Jacobean tragedies (*Hamlet*, *Othello*, *King Lear*). These troubling modern visions lead through problem plays to the antiheroic late tragedies and the romances (*The Tempest*), exploring issues of racism, colonialism, and social justice. We learn how critics have approached Shakespeare in many different ways, and how to evaluate and respond to critical opinion. Multimedia presentations show how performance and text combined enrich our understanding of this great writer. Formerly EN 356. Three credits. (A)

EN 215 Introduction to British 18th Century Literature

This selective survey of 18th-century English literature includes authors such as Pope, Swift, Gray, Jonson, Boswell, Goldsmith, Burns, and Montague. Formerly EN 361. Three credits. (A)

EN 216 The Victorian Epoch

This course examines the poetry and theories of poetry posited by Victorian men and women who explored concepts of identity vis-à-vis Victorian notions of culture, religion, science, politics, and sexuality. Beginning with Arnold and ending with Wilde, the course covers both poetry and literary movements such as Pre-Raphaelitism, Decadence, aestheticism, and symbolism. Formerly EN 275. Three credits. (B)

EN 217 Romantics, Victorians, Moderns: British Literature 1800-1950

A survey of three distinct but overlapping periods in British literary history - Romantic, Victorian, and Modern. As much a study of ideas as of literary works, the course examines the crucial ideological, philosophical, and cultural transformations that shape each of these important literary eras. Formerly EN 252. Three credits. (B)

EN 218 20th Century British Literature

A survey of major developments in twentieth-century British, Irish, and Anglophone Post-colonial literature. 20th-Century England is shaped by rapid technological changes, the breakdown of Victorian mores and orthodox beliefs, the devastation of the Great War, the advent of psychoanalysis, and the height and decline of the British empire. Students learn to recognize and evaluate how these events relate to the new, experimental styles of Modern, Postmodern, and Postcolonial writing. Authors studied range from early figures such as Joseph Conrad, Virginia Woolf, W.B. Yeats, and James Joyce to contemporary stars such as Kazuo Ishiguro, J.M. Coetzee, and Zadie Smith. Formerly EN 267. Three credits. (B)

EN 223 Comparative Renaissance Literature

A comparative introduction to European literature written from 1500-1700. Students will learn popular Renaissance genres, such as epic, lyric, closet drama, pastoral, and tragedy, in addition to major literary and artistic achievements. Coterminous historical movements will also be discussed: scientific revolution(s), religious warfare, magic and witchcraft, colonization and empire, gender hierarchies, and the rise and fall of sovereignty. We will pay careful attention to the biases of Eurocentrism, and repeatedly evoke alternative traditions and histories. Authors include Wyatt, Ariosto, Spenser, Montaigne, Sidney, Tasso, Rabelais, Shakespeare, and Milton. Three credits. (B)

Surveys in American Literature

EN 233 American Literature, 20th Century to the Present

A survey of 20th Century American Literature to the present within the socio-historical context of diverse and overlapping literary and cultural traditions of the United States, such as (though not limited to) Native American, African American, Anglo American, and Asian American. Writers might include Eliot, Hemingway, Faulkner, Yeziarska, Hughes, Hurston, McNickle, Bellow, Okada, Kerouac, Rich, Plath, Welch, Gaines, Jen. Three credits. (B)

EN 234 American Women Writers of the 19th Century

A study of American female writers who have made an impact on the world through their fiction, journalism, or poetry. The course is organized thematically around a set of topics related to nineteenth-century women's lives and selves: gender and domesticity, suffrage, slavery, labor, frontier life, sexuality, and social activism. African-American and Native-American women's writings and those of other ethnicities also form an integral part of the tradition. Writers may include Alcott, Beecher, Cary, Child, Chopin, Dickinson, Fern, Freeman, Gilman, Jacobs, Kirkland, Harper, Keckley, Jewett, Piatt, Ruiz de Burton, Sin Far, Spofford, Stowe, and Wharton. Three credits. (B)

Postcolonial Literature and Studies

EN 251 British/Imperial Texts

Maps the trajectory of the novel from the 18th century to its modern avatar in the 20th century by investigating how Victorian novelists addressed tensions between the classes and contentions between the sexes and races. It situates the origins of ideological, psychological, and social issues that come to dominate the modern novel by deconstructing the discourses around the self, gender/woman/sexuality, and family/marriage. Authors include Sand, Eliot, Dickens, Thackeray, Pater, Hardy and Forrester. Questions raised in this context focus on colonized subjectivities through tropes of nation/narration, minority discourse/canonical injunctions, imperial/colonial subjectivity, identity, home, and location/dislocation. Formerly EN 370. Three credits. (B)

EN 252 Topics in Modern and Contemporary Irish Literature

A survey of important themes and developments in 20th-Century Irish literature. Specific authors and topics may vary, but the course always emphasizes an understanding of Irish literature in historical and political contexts. In particular, the course examines the compelling, tense relationships between the aesthetic aims of Irish literature and its engagement with social and political concerns such as nationalism, decolonization, class conflict, postcolonial identity, migrations, transnational culture, and/or globalization. Formerly EN 279. Three credits. (B)

African American Literature

EN 262 The Harlem Renaissance

This course examines African American literature and culture from Washington's Up from Slavery and Du Bois's The Souls of Black Folk, through the 1920s and the Great Depression, to the eve of U.S. participation in World War II. Grounded in U.S. history, the course explores fiction, poetry, and other forms of cultural production such as painting, sculpture, film, and music. It examines the aftermath of Reconstruction, the effects of the Great Migration, and the responses to Du Bois's call for a "Talented Tenth." The Harlem Renaissance provides the major focus, as do the debates about whether there was such a movement at all. The course looks towards the development of a contemporary Black tradition in literature and culture. This course meets the U.S. diversity requirement. Formerly EN 339. Three credits. (B)

EN 263 African American Women Writers

This course offers a survey of writing by African American women from the mid-nineteenth century to the present, focusing primarily on autobiography and fiction. Beginning with Jacobs's *Incidents in the Life of a Slave Girl* and examining late-nineteenth-century fiction by authors such as Harper, the course examines issues of redefining womanhood, participating in racial uplift, and coming to voice as both women and as writers. Moving through the twentieth century and into the twenty-first, the course may include writers such as Larsen, Fauset, Hurston, Petry, Morrison, Lorde, Naylor, Sapphire, Blackman, Youngblood, and Packer. This course meets the U.S. diversity requirement. Formerly EN 371. Three credits. (B)

EN 264 African American Fiction 1940 to 1980

A comparative study of novels by African American men and women, beginning with Richard Wright and Ann Petry in the 1940s, continuing through the 50s and 60s with writers such as Ralph Ellison, Gwendolyn Brooks, James Baldwin, and Alice Walker, and ending with major novelists from the 1970s, such as Charles Johnson, Toni Cade Bambara, Ernest Gaines, and Toni Morrison. The course focuses on topics such as family, religion, education, and urban experience, education, gender and sexuality, and shifting definitions of Blackness. Narrative techniques offer a main thread of discussion throughout the course. This course meets the U.S. diversity requirement. Formerly EN 344. Three credits. (B)

EN 265 Contemporary African American Fiction

This course studies African American fiction from 1980 to the present, offering a mix of non-canonical authors such as Wideman and Morrison, along with emerging writers such as Helen Elaine Lee and Paul Beatty. The course begins with a neo-slave narrative and a novel that illustrates how the legacies of enslavement persisted into the twentieth century, and explores both urban and rural experience in primarily African American towns and neighborhoods, as well as analyzing the consequences of desegregation in different locales. Gay and lesbian lives have become more prominent in Black fiction in the past three decades, as depicted in several of the texts. This course meets the U.S. diversity requirement. Formerly EN 347. Three credits. (B)

Comparative and Transnational Literature**EN 274 Modernism in World Literature**

A survey of the international literary movement known as "Modernism" (roughly 1890-1930, though earlier and later figures are often included). The radical aesthetics of literary Modernism respond to the rapid social and political transformations of the 20th century and to innovative styles in the visual arts, film, music, and architecture. They are also controversial: Are these new styles subversive or reactionary? The art of Europe's elite or the art of a global revolution? Students learn to debate these issues in an informed way, and produce core-integrative projects that explore the connections between modernist literature and other fields of study. Formerly EN 397. Three credits. (B)

EN 275 Modern Women Writers

This course examines the work of late nineteenth- and early twentieth-century American and British "sisters in error" (as described by poet Dilys Laing). We consider literature and its contexts - social, historical, political, ideological, artistic, and more. Among the concerns raised by these women are the following: the body, sexuality, marriage, motherhood, domesticity, vocation, the making of art and the artist, the homosocial, patriarchy, the struggle for individuality, relations between the sexes, tensions between True Woman and New Woman, and what it means to be "modern." The reading list embraces fiction, poetry, drama, and nonfiction prose. Writers of focus may include Bowen, Chopin, Dinesen, Eaton, Gilman, Glaspell, Hurston, Larsen, Mansfield, O'Connor, Parker, Porter, Spencer, West, Wharton, and Woolf. Formerly EN 289. Three credits. (B)

Ethnic American Literature**EN 281 Native American Literature**

This course focuses on novels, short stories, and poems written by Native American writers during the 20th century. For purposes of background, the course also covers a number of significant works composed prior to this century. Students examine texts primarily for their literary value, but also consider the broad image of Native American culture that emerges from these works. The course also examines the philosophical, historical, and sociological dimensions of the material. This course meets the U.S. diversity requirement. Formerly EN 386. Three credits. (B)

EN 282 Latino/a Literature

This is an introductory course on the literature produced by Latinos in the U.S. The course approaches the subject from an interdisciplinary lens, examining the literature from not only the tools available in literary studies but history and sociology, as well. The course will address historical, contemporary political and socioeconomic issues affecting Latinos (the most historically prevalent of which have been immigration status, language regulation, and racial/ethnic discrimination) and connect them to cultural production. We read such authors as Sandra Cisneros, Junot Díaz, Ed Vega Yunque, various Nuyorican and Chicano Poets, and others to better understand the literary and cultural products of the now largest minority group in the U.S. Course readings and discussions are in English. Spanglish is welcomed. This course meets the U.S. diversity requirement. Formerly EN 280. Three credits. (B)

EN 283 Films and Novels in the Asian Diaspora: Challenges to Citizenship

This course examines the explosion of Asian fiction/cinema in the 20th century in the United States, to understand how diaspora, colonial histories, border identities, and cultural and ethnic representations operate. Texts include novels, films, and artworks that deal with the interpellation of contemporary Indian, Pakistani, Chinese, Japanese, Bangladeshi, Vietnamese, and Sri Lankan writers/artists into host cultures. Simultaneously, students learn about complicated Asian American identity around critical questions of citizenship. This is a notable shift that broadens concepts of political and cultural belonging for the second-largest immigrant minority. The course examines how Asian American filmmakers adapt genre categories such as realism (documentary), romance (musical), and comedy (animated/silent film) to stress their historical presence in the U.S., to claim American citizenship, and to challenge racist stereotypes of "aliens" as outsiders and foreigners. This course meets the U.S. diversity requirement. Formerly EN 286. Three credits. (B)

Thematic Courses

EN 291 Gender & Sexuality in Film & Literature

This course examines the way gender and sexuality are represented in film and literature, beginning with an overview of lesbians and gays in film history with Vito Russo's *The Celluloid Closet*. The course then moves through popular films and novels from the 1960s to the present day, looking at the ways attitudes about gender are enmeshed with representations of homosexuality. Themes and topics include: What is the relationship between gender and sexuality? How are concepts of masculinity and femininity presented in novels and on screen? How have these representations changed as our culture's rules about gender and sexuality have become less rigid? The course aims to develop an analysis of current cultural assumptions about gender and sexuality, as they are revealed in film and literature. Formerly EN 335. Three credits. (B)

EN 292 Contemporary Children's Literature

This course explores children's literature published in the United States between 1950 and the present. The course will give you both the chance to re-acquaint yourself with books that you enjoyed as a child and encounter books you missed when you were young. You will develop what critic U.C. Knoepfelmacher calls "the double perspective" - that is, the ability to consider books written for children as both a child and an adult reader. You will read literary criticism on children's literature, as well as information on careers in children's books publishing. Three credits. (B)

300 level Literature Courses

Students must complete at least one 100-level or 200-level literature course before enrolling in 300-level literature seminars.

Advanced Studies in Genre

EN 309 Modern and Contemporary Drama

This course covers the modern and contemporary (postmodern) periods of drama, from the 1850s to the present. Students read plays by such major Western dramatists as Buchner, Ibsen, Shaw, Pirandello, Chekhov, and Brecht, as well as writers who might be considered minor, non-canonical, and/or non-Western. This course emphasizes close reading and requires participation in discussions in which students demonstrate a grasp of dramatic conventions, form, structure, themes, as well as context including the cultural/material conditions under which each play was written and produced. Formerly EN 376. Three credits. (B)

Advanced Studies in British Literature

EN 311 Chaucer's Canterbury Tales

This course introduces students to Middle English language and literature through a close study of the poetry of Geoffrey Chaucer, focusing on his *Canterbury Tales*. Students analyze the stylistic forms and representations of 14th-century society through tales, selected for their generic and stylistic variety, that include the tragic and the comic, the sacred and the profane. Formerly EN 352. Three credits. (A)

EN 312 Medieval English Drama

his study of medieval dramatic literature and the history and theory of its performance focuses on the Corpus Christi cycles and the miracle and morality plays of late medieval England. The course examines critical issues such as civic and commercial contexts, intermingling of the sacred and the profane, unique symbolic language of medieval drama, orality and literacy, and the dramatization of contemporary social conditions. The course includes a performance component that takes the form of a research paper on performance history or a historically and theoretically informed stage production of a medieval dramatic text. Formerly EN 360. Three credits. (A)

EN 314 Renaissance Eros

This course explores eroticism in literature and visual culture in the Italian and English Renaissance(s), a time period from the late fourteenth century to the early seventeenth century. Topics of study include desire, sexual love, and beauty; the philosophy of friendship; the legacy of Petrarchanism; the pervasiveness of same-sex desire; cross-class relationships; and female sovereignty. The course offers a variety of interpretive models to analyze the complex role of eros in the works of Petrarch, Boccaccio, Plato, Shakespeare, Lyly, Marlow, and Montaigne. Formerly EN 354. Three credits. (A)

EN 316 Theoretical Readings of 19th Century Novel

This course discusses and debates the meaning of "decadence" as an aesthetic and literary category. Beginning with the works of the pre-Raphaelites in mid-19th-century England, moving to Walter Pater and Oscar Wilde in the Victorian era, and then into Europe with Baudelaire, Flaubert, and Mann, the course focuses upon the role of pleasure in European cultures. Paintings by Moreau, Delacroix, and Ingres complement the understanding of the literary texts. The course treats metaphors of Salome as a femme-fatale and literary characters such as Huysmans' Des Esseintes or Wilde's Dorian Gray as models for behavior - figures in a typology of unorthodox self-fashioning. Theoretical frameworks posited by Adorno and Benjamin will be used to query the constrictions and deconstructions of the European self in that critical cusp between the centuries. Formerly EN 336. Three credits. (B)

EN 317 Advanced Studies in 20th Century British Literature

An intensive study of an important theme, topic, or debate that spans most or all of the 20th century in British literature. Possible topics include: the distinction between modernism and postmodernism; the significance and value of aesthetic innovation; interrogation of the British empire; imperial cultural traditions and their aftermath; defining and redefining "Britishness" from modernity through the contemporary global and transnational era; history, memory, and narrative; poetry, poetics, and social change. Formerly EN 374. Three credits. (B)

EN 319 James Joyce

An intensive study of James Joyce's comic novel *Ulysses*, emphasizing thorough close reading of the text, understanding the work relative to Joyce's other fictional masterpieces, and extensive reading of related criticism and scholarship. Highly recommended: students should have read at least one complete work by James Joyce before taking the course. Formerly EN 393. Three credits. (B)

EN 321 Life & Print Culture in 18th-Century London

What was it like to live in eighteenth-century London? This course will explore daily life in London from the Great Fire to the French Revolution, using novels alongside other forms of popular literature - pamphlets, ballads, broadsides, cookbooks, and newspapers - to trace what ordinary people talked about and care about in their workaday world. Popular art such as Hogarth's engravings will show us what London and its people looked like. The course will investigate how to evaluate and discuss all forms of popular print culture within the larger context of literature. Formerly EN 276. Three credits. (A)

Advanced Studies in American Literature**EN 332 American Romanticism**

This course explores transcendentalism and romanticism during the flowering of intellectual and social life in America from 1830 to 1865. Studying the transatlantic origins of this movement in philosophy, religion, and literature, we examine how these writers responded to literary influences and crafted their unique style. The course also focuses on the relationship between literature and American culture, including a study of the visual arts and material culture. Authors include Emerson, Fuller, Thoreau, Alcott, Poe, Hawthorne, Melville, Douglass, Davis, Whitman, and Dickinson. Formerly EN 381. Three credits. (B)

EN 333 American Realism and Naturalism

This course examines the literary modes of representation known as realism and naturalism. We will consider the ways in which literature represents, responds to, and shapes the extraordinary transformations in American culture from 1865 through the turn into the twentieth century. The course will consider literature and its contexts - social, historical, political, ideological, artistic, and so on. Writers may include Chesnut, Chopin, Crane, Davis, Dreiser, Du Bois, Eaton, Freeman, Gilman, Howells, James, Jewett, Norris, Twain, Washington, and Wharton. Formerly EN 382. Three credits. (B)

EN 334 American Modernism

This course explores the wide ranging cultural dynamics of American literary modernism (roughly 1920-1950) in the works of writers such as Hurston, Hemingway, Yeziarska, Eliot, Hughes, Faulkner, Matthews. Topics to discuss include, but are not limited to, time, space, gender, nations(s), race, and ethnicity. Formerly EN 383. Three credits. (B)

EN 335 Contemporary American Literature & Culture

This course examines significant developments in American Literature and Culture from the period following World War II to the present. The course explores the turn to cultural studies in the field of literary studies that occurred during this period, allowing us to examine non-traditional literary texts such as music, film, graphic novels, and games. We ground our discussion heavily in literary theory. Formerly EN 384. Three credits. (B)

Theory**EN 351 Literary Theory**

The course examines the major theoretical approaches to the study of literature that developed in relation to important political and intellectual movements of the twentieth century. Despite highly significant differences, we presuppose that all literary theories pose similar questions: What is literature? Why does literature matter, and how do critics assign aesthetic value? This course studies the way various schools of theories have answered these questions. Included in our study are Formalism/New Criticism, Poststructuralism, Psychoanalytic criticism, Feminist theory, Gender and Queer Studies, Postcolonialism, and others. Course readings range broadly from Kant to Derrida, Freud to Spivak. Formerly EN 337. Three credits. (B)

EN 352 Cultural Studies

This interdisciplinary course examines the concept of culture as it is constructed, sustained, and contested within the United States and the United Kingdom. Readings focus on the history, theory, and practice of culture (high and mass) in the two countries. Class discussions focus on the interactive impact of our understanding of the term "culture" upon contemporary societies as it factors into nationhood, race, gender, class, sexuality, and media. As a way of understanding the various theories that undergird the experiential manifestations of culture, students will be exposed to print/visual texts and multimedia forms of expressions circulating in society. Formerly EN 349. This course meets the U.S. diversity requirement. Three credits. (B)

EN 353 Representations

This course focuses on "ways of seeing" and the "gaze" that are constructed and maintained in contemporary culture within the concept of representation. The course balances on the margins of textual and visual materials (paintings and films); offers an interdisciplinary theoretical base; examines the presentation and representation of self, subject, and identity as narrative, biography, and autobiography; and questions notions of realism and politics of realism as manifested by deploying race, class, nationality, sexuality, and gender. By reading theoretical tracts on the ways of seeing and by using films and visual art to test these theoretical materials, students critique contemporary notions of seeing and being seen. Formerly EN 345. Three credits. (B)

EN 354 Theories of/in Globalization

This course teaches students how globalization is defined by major theorists and how to interpret the effects of its massive and random forces. Students grasp the differences between economic, political, and cultural explanations and the actual impact of globalization. The theories are tested against new literatures to see how novelists manipulate the forces of globalization - such as explaining the feminization of poverty, ethnic cleansing, human rights violations, access to natural resources like water and land, terrorisms and proliferation of nuclear arms, religious fundamentalisms - through their characters. One of the crucial and consistent foci of class discussions is exploration of ethical ways to deal with globalization, the potential for civic engagement, and the responsibility we all share in creating a global civil society. This course meets the world diversity requirement. Formerly EN 287. Three credits. (B)

EN 355 Gender Theory

This course explores recent theories of gender and sexuality. Topics include the debate over origins (nature versus nurture), changing historical ideas about gender and sexuality, transgender identity, and intersexuality. The course focuses on theoretical material, fiction and film. Formerly EN 338. Three credits. (B)

Advanced Thematic Studies

EN 371 Comedy

This course studies various forms of literary, dramatic, and film comedy, emphasizing how comic writers and directors use structure, character, tone, and convention to create comic forms, including festive comedy, satire, comedy of manners, farce, and black comedy. Weekly short papers engage critical theories of humor and of comedy as literary and social form. Authors and directors include Voltaire, Molière, Austen, Shaw, Huxley, Beckett, Heller, Kubrick, Stoppard, Nichols, Hallström, Lee, Coen. Formerly EN 372. Three credits.

EN 372 All About Eve

This course surveys the literary and artistic representation of the legendary first woman of the Judeo-Christian tradition from Genesis to the present. The course centers on a reading of Milton's *Paradise Lost*. Other authors include Christine de Pizan, Aemilia Lanyer, Mary Wollstonecraft, and Ursula Le Guin. Students find and interpret depictions of Eve in contemporary popular culture during this course, which emphasizes a variety of possible interpretations of Eve, including feminist and anti-feminist traditions. Non-English sources are read in English translation. Formerly EN 357. Three credits. (A)

EN 373 Literature for Young Adults

During the past two decades, adolescent literature has proliferated, grown more diverse, and improved in richness and quality. The course explores the major current authors, poets, and illustrators of works written for young adults. Topics include theories and purposes of reading literature in the classroom; criteria development for evaluating adolescent literature; reader response in the classroom; reading workshop; and adolescent literature integration across the curriculum. Formerly EN 305. Three credits. (B)

EN 374 The Woman Question: Early Feminism & 19th-Century Transatlantic Literature

This course will examine the issue properly known as the Woman Question through some of the major works of 19th-century literature. Because the philosophical and political debates concerning Woman's role preoccupied not only 19th-century America but also Victorian Britain, we will consider American and British discussions as part of a transatlantic conversation. The course begins with early Victorian literature, moving across the Atlantic to the 1840s and 50s, when a group of "domestic feminists" became the most popular writers in the U.S. The course closes at the fin de siècle, when the conventions of sentimental fiction and "True Womanhood" were being superseded by realism and naturalism, and when an explicitly anti-domestic image of womanhood began to be formulated around the figure of the "New Woman." Authors may include Brontë, Fuller, Elizabeth Barrett Browning, Stowe, Fern, Jacobs, Christina Rossetti, Taylor, Mill, Patmore, Linton, Dickinson, Alcott, James, Harper, Gilman, Chopin, Freeman, and Wharton. Formerly EN 346. Three credits. (B)

EN 375 Caribbean Women Writers

This course offers a Pan-Caribbean study of women's writing, primarily contemporary fiction. Setting the novels in a context that begins in the Middle Passage or comparable forced migration to the Americas, we examine the interconnections between those traumatic experiences and the relations established and demanded by imperialism. Topics for discussion include spaces and languages of resistance; genealogies, family trees, roots; memory and exile; political activism and its consequences; labor and socioeconomic conditions; the role of education in colonialism and in immigrant life; and challenges to conventional categories of identity. Authors may include Marshall, Hopkinson, Kincaid, Condé, Danticat, Santiago, Santos-Febres, Obejas, McWatt, Brand, Collins, Mootoo, Espinet, Lara, and John. Formerly EN 396. Three credits. (B)

EN 376 Global Women's Fiction

This comparative study of fictional works by women begins with a discussion of issues raised in Virginia Woolf's *A Room of One's Own*, and focuses on writers from the early twentieth century to the present. Drawn from a wide range of world literatures and cultures, authors may include Aleramo, Djébar, al-Shaykh, Aidoo, Truong, Valenzuela, Menéndez, Roy, Dangarembga, Gordimer, Olsson, Rachlin, and Lispector. Topics include narrative techniques, women's relationship to the polis, women's participation in public culture and their artistic creativity, gender and sexuality, cross-class relations between women, and contemporary issues linked to globalization. Formerly EN 398. Three credits. (B)

EN 377 Urban Texts & Contexts

This course explores literary and visual evocations of the city from an interdisciplinary and theoretical perspective. In many ways, a city is as much a mental construct as a physical one, referred to as image, idea, myth, metaphor, vision, catalyst, and more. The course considers how such terms apply to representations of a metropolis, as well as how the city can be viewed as artifact or fiction. Drawing upon theories from geography, architecture, sociology, and urban studies, we examine the traditional dichotomy between city and country, the relationship between gender and sexuality and urban representation, and the ways that community is defined and envisioned in contemporary urban contexts. Formerly EN 392. Three credits. (B)

EN 399 Independent Study

See department chair for details. Three credits.

Writing Courses

EN 12 or equivalent is a prerequisite for all EN/W courses unless otherwise noted.

EN/W 200 Creative Writing

This course fosters creativity and critical acumen through extensive exercises in the composition of poetry and fiction. Three credits.

EN/W 202 Creative Writing: Poetry I

This workshop course concentrates on the analysis and criticism of student manuscripts, devoting a portion of the course to a discussion of major trends in contemporary poetry and significant movements of the past. The course considers traditional forms, such as the sonnet and villanelle, as well as modern experimental forms and free verse. Students learn how to prepare and submit manuscripts to publishers. Three credits.

EN/W 204 Creative Writing: Drama

This course teaches the writing of one-act plays for the stage in a workshop format that involves envisioning, writing/drafting, and regular revision of seed-ideas and subjects. The process requires skillful, imaginative handling of the formative elements of drama, including plot, character, language or speech-action, envisaged staging, and form. It also involves timely submission of assignments and drafts of scenes and whole plays for periodic in-class readings and feedback. Students are expected to submit at specified times midterm and final drafts that demonstrate the technique or art of playwriting as well as conform to the general requirements of the course. Three credits.

EN/W 205 Creative Writing: Fiction I

This course for the student who seeks an intensive workshop approach to fiction composition emphasizes the short story and focuses on the analysis of student manuscripts. It includes some discussion of the work of significant authors (past and present) as a way of sharpening student awareness of technique and the literary marketplace for fiction. Three credits.

EN/W 206 Creative Writing: Nonfiction I

This course offers students the opportunity to study and practice the art and craft of literary nonfiction. Students will study the work of accomplished writers in the field, both past and present, as a foundation for analyzing and critiquing each other's manuscripts in workshop format. Forms studied and practiced will include the memoir, personal essay, and reflective essay. Three credits.

EN/W 214 Professional Presentations: Writing and Delivery

The ability to speak confidently and convincingly is an asset to everyone who wants to take an active role in his or her workplace and community. This interdisciplinary and writing-intensive course provides students with the necessary tools to produce audience-centered presentations and develop critical-thinking skills. It also introduces the techniques of argumentation and persuasion, and the use of technology in presentations. Three credits.

EN/W 220 News Writing

This introductory course emphasizes the techniques used by reporters to collect information and write stories for newspapers, magazines, the Internet, and broadcast outlets. Students learn to gather information, interview sources, write leads, structure a story, and work with editors. Students analyze how different news organizations package information, hear from guest speakers, and visit working journalists in the field. Students develop a higher level of media literacy and learn to deal with the news media in their careers. (Can be taken simultaneously with EN 12) Three credits.

EN/W 221 Digital Journalism

The journalism world is in the middle of a transformation in the way stories are conceptualized, generated and communicated. Digital Journalism will help students discover how to take advantage of the multimedia possibilities in this new world of online story telling. This intermediate writing and multimedia course will allow students to build more complex and engaging story packages, taking advantages of new computer tools like the Adobe Creative Suite. It also will introduce students to the literature of publication design and help them develop an appreciation of the contributions that various world cultures have made to communication and design aesthetics. (Prerequisite: EN/W 220 News Writing) Three credits.

EN/W 222 Journalism Editing and Design

Editing skills are in high demand in today's journalism job market both for traditional and online sources of information. This intermediate level course emphasizes conciseness, precision, accuracy, style, and balance in writing and editing. The course includes researching and fact-checking, basic layout and design, headline and caption writing, and online editing. (Prerequisite: EN/W 220 or permission of instructor) Three credits.

EN/W 290 Writing and Responding

This course introduces the field of contemporary composition theory. Composition theorists consider ways of responding to the words of other people in a manner that is thoughtful, careful, and provocative. At the same time, they learn that by responding to the work of others, they ultimately become better writers and better thinkers themselves. This course focuses specifically on the response types appropriate for one-to-one work with writers.

Students also gain hands-on experience in the course by writing extensively, sharing writing with other class members, critiquing student texts, and engaging in trial tutoring sessions. This course is a prerequisite for anyone wishing to apply for a paid position as a peer tutor in the Fairfield University Writing Center. May be taken concurrently with EN 12. Three credits.

EN/W 295 Composition and Style

This intermediate course in basic non-fiction prose expands the writing skills gained in EN 11, emphasizing cultivation of an individual style in short essays on everyday topics. Three credits.

EN/W 302 Creative Writing: Poetry II

In a workshop setting, the class discusses six assignments, writing about a painting or writing in a structured form such as a sestina or sonnet. In addition to looking at models that illustrate individual assignments, the class reads collections by six poets and discusses a book on traditional forms. (Prerequisite: EN/W 202) Three credits.

EN/W 305 Creative Writing: Fiction II

This advanced workshop further develops skills begun in EN/W 205 by looking closely at the craft of fiction. Students produce a substantial body of quality work such as several full-length short stories or substantial revisions, a novella, or several chapters of a novel. In addition to reading selections from published fiction writers, students read and comment extensively on their peers' work. (Prerequisite: EN/W 205 or permission of instructor) Three credits.

EN/W 311 Advanced Composition for Teachers

This course prepares students to teach writing in grades 7-12. The course explores four significant questions: How do students learn to write? What assignments encourage good writing? What do professional or state standards (such as the Common Core State Standards) require students to know about writing? and, How should writing be assessed? We will also examine topics such as censorship, the "achievement gap," and the ethical responsibilities of a writing teacher. Three credits.

EN/W 317 Teaching and Learning Grammar

This course is intended for students who may want to teach English Language Arts and who want to build (or build on) a strong foundation in both traditional and alternative models of English grammar and pedagogy. This course will help students develop the knowledge skills and competences to meet the NCTE/ NCATE Standards for the Initial Preparation of Teachers of Secondary English Language Arts. A primary goal of the course is to help future teachers understand the study of grammar as more than learning a static list of "rules," but rather as a set of overlapping inquiries into the origins, nature, uses, and consequences of language. Three credits.

EN/W 320 Writing the Feature Story

Students learn how to generate and develop feature story ideas, including human-interest stories, backgrounders, trend stories, personality profiles and other softer news approaches for use by newspapers, magazines, and web sites. The course stresses story-telling techniques and use of alternative leads. Interviewing, web research and rewriting techniques are stressed. (Prerequisite: EN/W 220) Three credits.

EN/W 323 Photojournalism I

Photography is derived from the Greek words for light and writing. Just as a journalist masters the art of words, a photographer masters the art of writing with light. A photographer tells a story with a single image, or multiple images, which impact the readers with a wide variety of human emotions. This course is about reporting with a camera, the visual aspect of journalism. Some technical aspects will be covered, but the majority will be hands-on assignments that are typical of newspapers, magazines, and web sites. There is substantial reading on photojournalism, plus a variety of writing assignments. EN/W 220 or photography experience recommended. Formerly Visual Journalism. Three credits.

EN/W 327 Photojournalism II: Documenting The Community

Photojournalism is all about the decisive moment. This course explores social documentary photographers from the 1890s to the present. We will explore the variety of issues that were documented in various publications, as well as more recent digital projects in the age of the Web. Student will study and practice the valuable concept of photography as a tool to impact social change and immerse themselves in their own photo documentary story to help foster change in the Bridgeport and Fairfield communities. (Prerequisites: EN/W 220 and EN/W 323 or permission of the professor.) Three credits.

EN/W 329 Issues in News Writing

This intermediate course will focus on a different dimension of news writing each semester. Guest speakers will help students develop an ethical decision-making approach to journalism and deepen their understanding of the role of the press as a government watchdog. Students may take this course twice under different subtitles. Replaces EN/W 324-326. (Prerequisite: EN/W 220) Three credits.

EN/W 330 Literary Journalism

This course focuses on the use of story-telling techniques in writing creative nonfiction. Students learn how to make factual articles come alive by incorporating techniques such as narrative, dialogue, scene-setting, pacing, conflict and resolution. The course emphasizes interviewing and advanced research techniques used in writing these creative nonfiction articles for newspapers, magazines, books, and on-line sources. There will be substantial reading and analysis of classics in the literary journalism field. No formal pre-requisites beyond EN 11-12, but students are encouraged to have completed EN/W 220, EN/W 320, or have taken several literature courses. Three credits.

EN/W 332 Business Writing

This course investigates the demands of business writing, including designing documents that visually display information and invite readers to read either quickly or thoroughly. The course stresses theoretical issues as well as practical skills. Students practice writing skills on a variety of projects including memos, proposals, reports, collaborative writing, and writing as part of the job-hunting process. Learning goals include understanding the purposes of writing in business and industry, writing with a clear sense of audience, becoming familiar with document design and electronic communication, ethical and cross-cultural issues, and reviewing scholarly writing and research in this academic field. Three credits.

EN/W 335 Technical Writing

This course investigates the theory and practice of writing in technical fields, introducing students to types of oral, written, and hypertext communication that technical writers use in workplace settings. In-class writing activities, workshops, and lengthier projects familiarize students with the styles, organizations, and formats of various documents, and prepare students for the special demands of technical writing. The course also introduces students to research and scholarly writing in the academic field. This course is suitable for advanced undergraduate students preparing for writing-intensive careers or graduate school, as well as technical writing professionals and practitioners who wish to plan, research, and write more effectively. Three credits.

EN/W 336 Issues in Professional Writing

This course investigates a variety of issues relevant to contemporary professional writing. In addition to surveying theoretical positions in the discipline, the course emphasizes preparing effective written products for academic and professional settings. In-class writing activities, workshops, and lengthier projects prepare students to think critically in this dynamic and ever-changing profession while familiarizing them with the writing styles, organizations, and formats of various documents. Topics include writing for public relations, international technical writing, and technical and professional editing. This course is suitable for advanced undergraduate students preparing for writing-intensive careers or graduate school. Students may take this course twice under different subtitles. Three credits.

EN/W 338 Persuasive Writing

This course sharpens students' skills in argument and encourages a clear, forceful prose style. Students practice writing skills in a variety of projects including resumes and cover letters, editorials, formal proposals, and public service announcements designed for video podcasts. Students will learn how to analyze an audience and use key features of persuasion such as concessions, disclaimers, rebuttals, and effective leads. The course examines the ethical responsibilities of a persuasive writer in business and civic life. Three credits.

EN/W 339 Grant and Proposal Writing

This course prepares students to write effective proposals and reports. Students learn to define and write problem statements, objectives, plans of action, assessment documents, budget presentations, and project summaries. In addition, they sharpen their teamwork, editing, writing, audience awareness, and design skills as they engage in collaborative projects with non-profit organizations in the community. Relevant historical and ethical considerations are discussed. A service-learning component is included in this course. Three credits.

EN/W 340 The World of Publishing

This course introduces students to the field of publishing, particularly book and magazine publishing. It provides students with a solid foundation in the publishing field (e.g., selecting and editing manuscripts, book/magazine production, and marketing) and offers students practical hands-on experience similar to that of an internship position at a magazine or publishing house. In addition to attending lectures and participating in discussion, students work on the University's national literary magazine, *Dogwood*. Three credits.

EN/W 341 The World of Publishing II

Students gain hands-on experience in the field of publishing, particularly book and magazine publishing, by working as associate editors in the preparation of the University's national literary magazine, *Dogwood*. Prerequisite: EN/W 340 The World of Publishing or permission of instructor if student has equivalent experience. Three credits.

EN/W 345/346 Fall/Spring Internship

The internship program allows students to gain on-site experience in the fields of journalism, publishing, and public relations through supervised work for local newspapers, magazines, publishers, and news agencies. These positions are available upon recommendation of the department intern supervisor, under whose guidance the students assume the jobs, which require 10 to 15 hours a week. Students may take one internship for credit toward the English major. Students may take a second internship for elective credit. (Prerequisite: Permission of department intern supervisor) Three credits.

EN/W 347/348 Fall/Spring Independent Writing Project

Students undertake individual tutorials in writing and can obtain credit for writing for *The Mirror*, *The Sound*, or for other projects of personal interest. Only one independent writing project can be counted toward fulfilling the five field electives required to complete an English major. The department will consider exceptions only if multiple Independent Writing Project courses cover different subject areas and approval in advance is obtained. (Prerequisite: Permission of instructor) Three credits.

EN/W 350 Special Topics: Writing

This course is an umbrella under which a variety of courses can be taken on an experimental or temporary basis, exploring different writing styles and approaches. Three credits.

EN/W 397 Journalism Practicum

Students apply the material learned in class by working as a reporter, photographer or editor with the campus newspaper, *The Mirror*. The course is designed for *Mirror* editors or students with equivalent experience. Prerequisites: EN/W 220 News Writing, junior/senior status, and one semester on *Mirror*, or approval of instructor. Three credits.

EN/W 398 Publishing Practicum

Students apply material learned in World of Publishing as they serve in a senior editorial role as a Managing Editor in the preparation of the University's national literary magazine, *Dogwood*. Prerequisite: Junior/senior standing and ENW 341 The World of Publishing II or equivalent experience. Enrollment by permission only. Three credits.

Understanding the natural environment, human impacts on the environment, and human perspectives on these relationships is more important than ever. The environmental studies program centers on an interdisciplinary approach that combines study of the natural sciences, social sciences and the humanities; the encouragement of critical thinking; and opportunities for in-depth investigative research and applied experiential activities.

Requirements

Students complete at least 6 courses, including a capstone experience.

Environmental Studies Curriculum

A. One course from each of the three major areas of study:

- 1) Natural Sciences (one of the following)*:
 - BI 74 Biology of Food
 - BI 76 Environmental Science
 - CH 85 Chemistry, Energy, and the Environment
 - 2) Social Sciences (one of the following):
 - BU 220 Environmental Law and Policy
 - EC 120 Environmental Economics
 - PO 131 International Environmental Policy
-

3) Humanities (one of the following):

- AE 284 Environmental Ethics
- EN 121 American Literature and the Environment
- EN 143 Greenworld: English Literature and the Environment

B. Two elective courses from the list of elective courses below (can include courses from above).

C. One capstone course, (one of the following):

- EV 301 Environment Workshop
- EV 299 Independent Study
- EV 298 Internship

* *Biology majors may substitute BI 260, BI 364, or BI 366 for one of these courses.*

Elective Courses:

AE 283 Environmental Justice
 AE 284 Environmental Ethics
 AE 297 Eco-feminism
 AH 282 Green Architecture
 AY 175 Sustainable Development: Anthropological Perspectives
 BI 74 Biology of Food
 BI 75 Ecology and Society
 BI 76 Environmental Science
 BI 78 Introduction to Marine Science
 BI 79 Latin American Ecosystems
 BI 260 Ecology
 BI 364 Freshwater Ecology
 BI 366 Ornithology
 BI 372 Environmental Toxicology
 BU 220 Environmental Law and Policy
 CH 85 Chemistry, Energy and the Environment
 EC 120 Environmental Economics
 EC 225 Environmental Economics: Tools and Techniques Applied to U.S. Policy
 EN 121 American Literature and the Environment
 EN 143 The Greenworld: English Literature and the Environment
 ENW 325 Environmental Reporting
 EV 298 Environment Internship
 EV 299 Independent Study
 EV 301 Environment Workshop
 EV 302 Special Topics in the Environment
 HI 287 A Green History of Latin America
 PO 131 International Environmental Policy
 PO 132 Climate Change: Politics and Policy
 PO 169 US Environmental Politics and Policy
 PS 93 Energy and the Environment

Most courses in the environmental studies program are offered in collaboration with other departments, and count toward degree programs in other departments and programs, including Anthropology, Applied Ethics, Art History, Biology, Business, Chemistry, Economics, English, History, Philosophy, Politics, and Physics. Therefore, descriptions for most of the environment courses listed above appear in those sections of this catalog.

Students may double-count courses with all core and major requirements. Students who study abroad in an environmental program can work with the director or their advisor in the Program to match courses taken overseas with Environmental Studies requirements.

Course Descriptions

EV 298 Environment Internship

Environmental studies minors gain firsthand experience working off campus in fields related to environment science, policy, economics, education, and other issues. Typically, an internship requires 8 to 12 hours per week on site and a journal or summary report for credit. An on-site supervisor and an environmental studies professor evaluate student work. (Prerequisites: 3.0 GPA, completion of three environmental studies courses, and program approval.) One to three credits.

EV 299 Independent Study

A student may conduct a one-semester independent study on a defined research topic or field of study under the supervision of a professor in the Environmental Studies Program. Credit requires prior approval by the Professor with whom the student will work as well as the Director of the Environmental Studies Program (Prerequisites: 3.0 GPA, junior or senior status, three environmental studies program courses, and program approval.) One to three credits.

EV 301 Environment Workshop

The Environment Workshop is a capstone course for students in the Environmental Studies Program but is also open to all juniors and seniors at the University. This course centers on a semester long, interdisciplinary project that examines a particular environment-related issue and proposes practical solutions. Three credits.

EV 302 Special Topics in the Environment

Students and faculty explore a specific topic in environment science or policy in great detail. Three credits.

The Department of History introduces students to the richness and complexity of the human experience. The discipline of history trains students to understand history as process: to research, analyze, synthesize, and critically evaluate evidence. To the historian, factual information is never an end in itself, but a means to understand how the conditions of our own day evolved out of the past. Those who major or minor in history receive a broad preparation for entrance into graduate school and the traditional professions of law, government, foreign service, journalism, business, and teaching. The department participates in interdisciplinary programs, including American studies, Asian studies, Black studies, Program on the Environment, Judaic studies, Latin American and Caribbean studies, International studies, Russian and East European studies, Women, Gender and Sexuality studies, and University honors. Students who attain high standards of scholarship are sponsored for membership in the department's Psi Theta Chapter of Phi Alpha Theta, the International Honor Society for History, and participate in the special programs under its auspices.

Requirements

Bachelor of Arts in History

For a 30-credit major in history students complete the following:

- HI 10 Origins of the Modern World Since 1500 (formerly HI 30 Europe and the World in Transition)
 - A minimum of nine upper-division history courses (200 level and above)
 - Four upper-division courses must be designated advanced (300 level).
 - Two upper-division courses must be in European history; two must be in U.S. history; and two must be in non-Western history (Africa, Asia, Latin America, Middle East).
 - At least one upper-division course must focus on a period prior to 1750.
 - At least one upper-division course must focus primarily on a period after 1750.
-

History Minor

For an 18-credit minor in history, students complete the following:

- HI 30 Europe and the World in Transition
- A minimum of five upper-division courses
- Two upper-division courses must be designated advanced (300 level).
- One upper-division course must be in European history, one must be in U.S. history, and one must be in non-Western history (Africa, Asia, Latin America, Middle East).

To ensure a well-planned and coordinated program, students are required to work closely with their history faculty advisor.

Educational Studies Minor

History majors and minors who elect a minor in Educational Studies and who have been admitted to the 5-year Integrated Bachelors-Masters Degree and Teacher Certification Program will fulfill the State of Connecticut content requirements for certification in Social Studies through their coursework for the History major or minor, plus 18 credits in other social sciences. Please consult with Dr. Cecelia Bucki in the Department of History and Dr. Patricia Calderwood in the Department of Educational Studies and Teacher Preparation, GSEAP, for additional information. See catalog entry for Program in Education.

Core History Courses

All Fairfield University students take two history courses as part of their liberal arts core curriculum requirement. This requirement is fulfilled by HI 10 Origins of the Modern World Since 1500 (formerly HI 30) plus one 200-level course.

Course Descriptions

HI 10 Origins of the Modern World Since 1500 (formerly HI 30 Europe and the World in Transition)

The course, which examines the history of Europe and its relationship to the world from the end of the Middle Ages through the 19th century, emphasizes the cultural, social, economic, and political forces and structures that led to the development of commercial and industrial capitalism, and the effects of this development on Europe, the New World, Asia, and Africa. Topics include the Renaissance and Reformation; the Transatlantic Slave Trade; European expansion and colonialism; the development of strong nation states; the Enlightenment; the Industrial Revolution and conflicting ideological and political responses; changing social, family, and gender relationships; and the increasing interaction of Europeans and non-Europeans. Critical analysis of primary and secondary sources develops skills in historical methodology that are of great value in many other academic pursuits. Written assignments and class discussions enhance these skills. (Not open to students who have completed HI 30) Three credits.

HI 201 History of Western Science

This course is an introduction to the history of western science from antiquity to the present. Science informs our understanding of and interaction with every aspect of the world around us. In this course we will explore the historical paths that brought us to our contemporary understanding of the core sciences. We will examine scientists and their science within the broader historical contexts that shaped their lives and work. We will think critically about how scientific knowledge is created and the way society has used and abused scientific information. (Prerequisite: HI 10 or HI 30) Three credits.

HI 202 Health and Healing in America 1650-1980: History of Western Medicine

This course examines major themes and problems in the history of health and medicine in America. Students will explore the changing conceptions of health, illness, and disease from the colonial period through the 20th century in the U.S. Students will analyze the economic, political and cultural forces that helped shape the activities of patients and medical practitioners within an evolving medical marketplace. This course will introduce students to the perspectives of a wide range of sufferers and healers. Students will examine how medical theories, gender, race, class, and ethnicity have shaped the history of medicine in complex ways. (Prerequisite: HI 10 or HI 30) Three credit.

HI 203 European Society in the Middle Ages

This course examines the social history of Europe from the barbarian migrations of the fifth century until the end of the Hundred Years War. From feudalism and the concept of courtly love, to the bitter power struggles of popes and monarchs, the course emphasizes emerging institutions, secular and religious, that came to define Western Europe in this and subsequent ages and to provide its most enduring rifts and hatreds. The course offers in-depth consideration of the role of women in medieval society, the persecution of Jews and other minorities, the Crusades, and the Black Death, with particular focus on their impact on the lives of average Europeans. Students read from primary and secondary sources. (Prerequisite: HI 10 or HI 30) Three credits.

HI 205 Antisemitism: Medieval to Modern

This course surveys the history of Jewish-Christian interaction in Europe from late antiquity until the Dreyfus Affair, with emphasis on the 10 centuries between the ninth and the 19th. Using primary and secondary sources, literature, and film, students explore the complex relationships between Jews and Christians in these years, including often overlapping instances of persecution, segregation, disputation, coexistence, assimilation, and cooperation. The major political events, social shifts, and intellectual trends that profoundly altered European society in this extended period provide the backdrop against which the changing lives of Jewish and Christian Europeans are studied. (Prerequisite: HI 10 or HI 30) Three credits.

HI 210 The Third Reich

This course examines the origins and legacy of the Nazi dictatorship during the years 1933-1945. We begin by analyzing the factors that facilitated the Nazis' rise to power including the long-term peculiarities of German history, the short-term crises of the years 1918-33, and the relationship between Hitler and the German people. Thereafter, the course examines the social, economic, political, and cultural life of the Third Reich during the years, 1933-39, before turning to Hitler's unleashing of World War II and the Holocaust in the years 1939-45. The course concludes by surveying the Nazi era's lingering legacy in postwar German and European memory. Formerly HI 310. (Prerequisite: HI 10 or HI 30) Three credits.

HI 212 Modern Germany: From Reich to Republic

This course examines the turbulent history of modern Germany from the Second German Empire, or Kaiserreich, to the present-day Federal Republic. Themes include the destabilizing emergence of Germany as a great power in the late 19th century, the outbreak of World War I, the collapse of the Empire, and the revolutionary upheaval of 1918 to 1919. The course examines the birth of the ill-fated Weimar Republic, the rise of Nazism, and the establishment of the Third Reich before moving to Hitler's unleashing of World War II, his genocidal campaign against the Jews, and Germany's ensuing wartime devastation, occupation, and division. The course concludes with an examination of the postwar political, social, and cultural development of West and East Germany through the nation's unification in 1990. (Prerequisite: HI 10 or HI 30) Three credits.

HI 213 In the Wake of Destruction: Europe Since World War II

This course surveys the major political, social, and cultural trends that have swept Europe since 1945. Themes include the struggle to reconstruct a stable political order in the immediate aftermath of WWII, the conservative retrenchment of the 1950s, the New Left radicalism of the 1960s, the neo-conservative reaction of the late 1970s and 1980s, the alleged "end of history" following the revolutions of 1989, and Europe's political future in the post-9/11 age of globalization. Against the backdrop of these political trends, we examine how the trauma of war, the achievement of economic prosperity, the upsurge in anti-establishment radicalism, the emergence of a multicultural European society, and fears of decline have affected a wide range of cultural realms, spanning literature, philosophy, art, architecture, and film. (Prerequisite: HI 10 or HI 30) Three credits.

HI 214 Modern Jewish History: 1750 to Present

This course surveys the history of the Jewish people from the middle of the eighteenth century up to the present day. Following a brief survey of the ancient and medieval periods, we will examine the social, political, and cultural changes brought about by the dawning of the Jewish Enlightenment, the struggle for political emancipation, and the pursuit of religious reform in Western and Eastern Europe. We will then examine modern anti-Semitism, Zionism, the Holocaust, and the founding of the state of Israel. The course concludes by surveying the history of American Jewry. (Prerequisite: HI 10 or HI 30) Three credits.

HI 215 Ireland from the Middle Ages to the Present

This course examines political, religious, economic, and social developments in the Irish island from early medieval times to the present day. Topics include Celtic culture and civilization, the coming of Christianity, the Viking and Norman invasions, the English conquests in the 16th and 17th centuries, the 18th-century Protestant ascendancy, the subsequent struggle for Catholic emancipation and home rule, the Potato Famine of 1845 to 1850, the struggle for independence during the early 20th century, the ultimate establishment of the Irish republic, the current problems in Northern Ireland, and the historical ties between Ireland and the United States. (Prerequisite: HI 10 or 30) Three credits.

HI 216 Rise of the British Empire

This course examines British overseas expansion between 1500 and 1815: the Tudor-Stuart conquest of Ireland; the establishment of the North American colonies and West Indian plantations; the growth of British power in India during the 18th century; and the early phases of British rule in Canada, Australia, and South Africa. Students study the causes and effects of imperial expansion from the standpoints of British political development, British society, the English-speaking colonists, and the native peoples of the empire. (Prerequisite: HI 10 or HI 30) Three credits.

HI 217 Britain and its Empire Since 1800

This course examines the British Empire from its great 19th-century expansion into Africa and Asia to its eventual crumbling under the impact of 20th-century independence movements and global war. Students compare the various independence movements, from the relatively peaceful transitions of Canada and Australia to the more violent ones by Ireland, South Africa, and India. The course finishes with an examination of the current racial and cultural conflicts that beset Britain's former colonies, with particular focus upon Ireland and South Africa. (Prerequisite: HI 10 or HI 30) Three credits.

HI 220/CL 220 Ancient African Civilizations

This class introduces the civilizations of the ancient Nile Valley, Egypt, Nubia and Ethiopia. It also provides an introduction to the transformation and survival of those civilizations into the medieval and modern worlds. Lectures will cover the social and political history of Pharaonic Egypt; the transformations of Egypt under Greco-Roman rule; the emergence of independent Nubia; the birth of a centralized and literate society in the Ethiopian highlands; the Christianization of Egypt, Nubia, and Ethiopia; the survival of Nubia and Ethiopia as independent medieval powers; and the historical memory of modern Copts, Nubians and Ethiopians. (Prerequisite: HI 10 or HI 30) Three credits.

HI 221/CL 221 The Hellenistic World, 336-30 BC

The course examines the Mediterranean world and the ancient Near East from the late fourth to late first centuries BC. Focus is on: the career of Alexander the Great; the Greek kingdoms that emerge after the collapse of his empire; the interaction between local cultures and religions, e.g. Egypt, ancient Judaism, and Greek civilization; the social history of daily life in conquered lands under Greek rule; and the transformations in the Hellenistic world with the arrival of Roman rule. This course meets the world diversity requirement. (Prerequisite: CL 115, CL 116, HI 10 or HI 30) Three credits.

HI 222/CL 222 The Roman Revolution

This comprehensive study of the political, social, artistic, literary, and military transformation of Rome from the middle of the second century B.C.E. through the reign of Augustus gives special attention to Rome's response to the cultural and governmental challenges imposed by its growing empire and how its responses forever changed the course of Western civilization. (Prerequisite: CL 115, CL 116, HI 10 or HI 30) Three credits.

HI 223/CL 223 The Roman World in Late Antiquity, 284-642 AD

The course examines the Mediterranean world from the third to seventh centuries AD. Focus is on: the collapse of the Roman Empire in western Europe; the dramatic upheavals caused by the arrival in the Roman Empire of the Visigoths, Vandals, and other barbarian tribes; the survival of the Byzantine East through the early Islamic conquests; the rise of Christianity from a persecuted religion to the official religion of the Roman Empire; and the accompanying cultural transformations, including the rise of monasticism and the importance of the holy man. (Prerequisite: CL 115, CL 116, HI 10 or HI 30.) Three credits.

HI 230 Early Modern France: Passion, Politics, and the Making of National Identity

This course covers the political, social, and cultural development of France from the 16th-century Wars of Religion to the ascension of Napoleon I in 1804, with an emphasis on the effects of revolutionary change on daily life (including the role of women, popular piety, the church and religious dissent, and labor relations), and on the impact of new political languages beyond the borders of France itself. Source readings, from the salon writings of the Bourbon court to the raucous songs of the streets of Paris, aid in considering if a French identity was formed during the period. (Prerequisite: HI 10 or HI 30) Three credits.

HI 237 The American Prophetic Tradition

This Ignatian Residential College course explores the experiences of individuals and social movements throughout U.S. history, who from a variety of religious and philosophical traditions found meaning in their lives and made an impact on U.S. society. Individuals range from Mary Dyer and Roger Williams to Lucretia Mott, Walter Rauschenbusch, Dorothy Day, John Cardinal Murray, and Jonathan Kozol, from the abolitionists to the anti-war movement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 238 Nineteenth-century United States

Students study the major transformations in U.S. economy, society, and politics from the Federalist era, through the Civil War to the beginning of the Progressive Era. The course analyzes forces of change in the United States - the struggle over slavery, as well as urbanization, industrialization, the maturation of corporate capitalism, and the growing importance of international affairs - and their effects on the way people lived, thought, and acted. The experiences of African-Americans, immigrants, and women receive special attention. (Prerequisite: HI 10 or HI 30) Three credits.

HI 239 Twentieth-century United States

The course surveys developments in American social, political, and economic life since 1900. Major themes include problems of advanced industrial society, the growing government role in the economy, America's growing role in the world, and social movements of the 1930s and 1960s. Ethnic and cultural diversity within American society receive attention. The course meets the U.S. diversity requirement. (Prerequisite: HI 10 or 30) Three credits.

HI 240 The Personal is Political: Women's Activism in the 1960s

Little fanfare and much derision accompanied the re-emergence of a women's movement in the mid-1960s. Within less than a decade, massive changes were underway. From the dismantling of gendered employment ads to the identification of domestic violence as a crime, few argued that Second Wave Feminism was meaningless. Students in this course discuss the depth and range of women's grass roots activism as well as the features of a social movement; they trace the development of consciousness, the growth of different ideologies, and the formation of agendas. The course also explores movement fault lines such as the fictive category of woman, racism, and "structurelessness," in addition to the difficulties of sustaining coalition. From the Montgomery bus boycott in 1955 to the Houston Conference 22 years later, students encounter the women who illuminated the political nature of issues once relegated to the private arena. Course material includes extensive use of autobiography. This course meets the U.S. diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 241/TA 241 Examining the Sixties: History, Art, and Legacy

This course, offered by two historians who specialize in 20th-century American history, explores the 1960s from the dual perspectives of history and the arts. Political and artistic change happened concurrently in this era, and was often instigated by people who promoted societal change via the creation of art. The course approaches the period as "the long '60s," beginning in the early 1950s and ending in 1975 with the U.S. withdrawal of forces from Vietnam. Class sessions combine lecture, discussion, and experiential events as a means of understanding how art and activism worked hand-in-hand. Students may choose to take this course for either visual and performing art or history core credit. Also listed as TA 241. This course meets the U.S. diversity requirement. Three credits.

HI 243 American Constitutional and Legal History I, 1776 to 1900

This course covers the origins of the American constitutional tradition, the manifold heritage of the American Revolution, Jeffersonian republicanism and federal judicial power, nationalism and the centralization of the Marshall court, the reaction on the Taney court, slavery and sectionalism, the Civil War, Reconstruction, the Second American Constitution, and the Gilded Age turn in American law. (Prerequisite: HI 10 or HI 30) Three credits.

HI 244 American Constitutional and Legal History II, 1900 to Present

This course examines the latter portion of the Fuller court, Imperialism and the Constitution, governmental efforts to restore economic competition, the police power, economic reform, progressivism, the tradition of national supremacy, new turns in civil liberties, the New Deal and the old Supreme Court, civil rights and the incorporation theory of the 14th amendment, and new roads back to legal conservatism. (Prerequisite: HI 10 or HI 30) Three credits.

HI 245 Feminism in the United States

Participants study feminism based on the premise that it is a multi-faceted struggle for women's autonomy and self-determination. The course focuses largely on the United States, birthplace of the first organized women's movement; however, it periodically expands its view beyond the United States for purposes of comparison. Students analyze the development of the feminist movement as well as feminist theory during the 19th and 20th centuries and explore the discourse on gender mediated by race and class, and its impact on women's lives. Using primary and secondary sources, students work toward a historical definition of feminism. Formerly listed as HI 143. This course meets the U.S. diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 246 Women and Gender in U.S. History

This course surveys American women's history from the colonial era to the present, exploring the impact as well as the interdependence of gender, race, and class on experience. Although the term social history describes the course approach, it uses biography to illuminate key issues and enrich student perspectives. Through careful examination of primary and secondary sources, the course pursues two themes: the interplay of gender constructs through the myths and realities of women's lives, and the crucial role women played in transforming public and private space. The course views women as agents whose testimony and actions are vital to understanding our history. Formerly listed as HI 142. This course meets the U.S. diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 247 Family and Sexuality in U.S. History

This course examines the growing scholarship in the fields of family history and sexual history in America. Students will explore the changing meanings of family, love, intimacy, emotions and sexuality from the colonial period through the 20th century in the U.S. Students will analyze the economic, political and cultural forces that helped shape sexual and family history. This course will introduce students to a wide range of American families and sexualities in history, examining how race, class, and ethnicity have made familial formation, sexual behavior and personal identity richly varied and complex. (Prerequisite: HI 10 or HI 30) Three credits.

HI 250 America Enters the World: United States Foreign Relations, 1763 to 1900

Students explore the foundation of U.S. foreign relations from independence in 1776 to the outbreak of World War I in 1914. This course looks closely at the interrelationship between ideals and reality as the new United States struggled to protect and confirm its independence, establish a constitutional basis for foreign policy, and expand its borders and influence across the North American continent and around the world. The course discusses such questions as manifest destiny, the Monroe Doctrine, the Mexican War, the displacement of Native Americans, southern expansionism and the Civil War, the Spanish American War, and the open door policy as the United States became a world power on the eve of World War I. (Prerequisite: HI 10 or HI 30) Three credits.

HI 251 The American Century?: The United States and the World since 1900

This course examines the development, crises, and turning points in U.S. relations with the world from Woodrow Wilson to the present, exploring issues such as U.S. reactions to the Russian Revolution, World War I, isolationism and the coming of World War II, the Grand Alliance, the origins and development of the Cold War, the nuclear arms race, the Vietnam War, the United States and Latin America, U.S./Soviet relations, the Middle East and Persian Gulf crises, and the post-Cold-War world. (Prerequisite: HI 10 or HI 30) Three credits.

HI 253 Early America to 1800

This study of the foundations of American civilization compares the colonial systems of Spain, France, and England. The course stresses the development of the British colonies in New England, the mid-Atlantic, and the South, with special emphasis on such topics as Puritanism, the Great Awakening, and the Enlightenment in America. The course continues through the American Revolution and the early United States to 1800. The role of outsiders - free and enslaved Africans, women and American Indians - is stressed. (Prerequisite: HI 10 or HI 30) Three credits.

HI 255 The United States in World War II

This course investigates the origins of World War II from the failures of the World War I peace settlements, the League of Nations, and collective security to the eruption of war in Europe and the Japanese attack on Pearl Harbor. The course examines important diplomacy of the wartime alliance; the major theaters of war; the military campaigns of Europe, Russia, North Africa and the Mediterranean, Asia, and the Pacific; use of the atomic bomb; and failure to make a satisfactory peace. Formerly HI 355. (Prerequisite: HI 10 or HI 30) Three credits.

HI 257 Who Built America? Working People in American History

This course explores the history of working people's lives and social movements in the U.S. from the pre-industrial era, through the Industrial Revolution, to today's "post-industrial" society. This is not an Industrial Relations course. We look at three broad areas of historical change: 1) work itself; 2) the making and re-making of the American working class; and 3) the definitions of social justice that working people constructed for themselves and that informed their social movements. Our goal is to understand how and why the "Labor Question" was at the heart of American reform movements in the 19th and 20th centuries. Special attention will be given to the experiences of women, African Americans, and other racial and ethnic groups. This course meets the U.S. diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 260 American Indian History

After a broad survey of prehistoric Indian cultures in North America as they existed before contact with Europeans, this course focuses upon European contact and its effects on Native-American culture. The course explores the Native American's role in the colonial period of eastern North American history and the ways in which Native American societies west of the Mississippi River responded to U.S. expansion in the 19th century and to that of the Spanish earlier. The evolution of federal Indian policy from the American Revolution to the late 20th century is a major topic. This course meets the U.S. diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 262 African-American History, 1619 to 1865

This course examines the role that Africans played in the building of America after their forced migration to these shores. It emphasizes the rise of the plantation system, the cultural transformation of Africans into African-Americans, and the essential roles that slaves and slavery played in the emergence of the United States as an independent nation and its political and economic consolidation into a modern nation-state. Slaves and free blacks figure in this history, not just as tools and backdrop, but as social and political actors, rebels, and major builders of American civilization. This course meets the U.S. diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 263 Inventing Themselves: African-American Women in U.S. History

At the intersection of race, gender, and class, African-American women often challenged the codification of blackness and femaleness as well as a limited conception of class consciousness. From the diaspora to the present, they created forms of resistance, devised survival strategies, and transmitted cultural knowledge while defying racial/gender stereotypes. The multiple roles assumed by African-American women during their struggle from slaves to citizens in the United States represent a complex study of the relational nature of difference and identity. This course focuses on African-American women as subjects and agents of pivotal importance within the family, community, and labor force. This course meets the U.S. diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 264 African-American History, 1865 to Present

This course examines the role people of African descent played as freed people and free people during Reconstruction, the Gilded Age, and the 20th century. It emphasizes the Southern origins of African America, the politics and economic activism of common people, and the recurring theme of struggle against racial injustice. This course meets the U.S. diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 270 History of Global Humanitarian Action

This course, an intermediate (second core) history course, surveys the history of global humanitarian action in the face of famine, war, plague, natural disaster, refugees and other crises, since the middle of the nineteenth century. We will focus on intervention by European powers, the United States, the international community, and non-governmental actors. Special focus in case studies will be on 20th century war, famine, and genocide. Each student will research a case study with a focus on potential points of life-saving intervention. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 271 Introduction to Russian History, Culture and Civilization

This intermediate level history and culture course will introduce students to the multiple facets of Russian identity. Embracing the period from East Slavic settlements in the ninth century to contemporary Russia under Yeltsin, Putin and Medvedev, the course will survey major themes that contributed to the creation of the Russian archetype. The idiosyncrasies of Russia's geographic location, the enduring presence of Russian Orthodoxy, the complex relationship with the West, debates about "Russianness" among the Russian intelligentsia and the context of the Soviet Union and its disintegration, will be explored through literary texts, film, and significant works of art. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 272 Russia, 700-1700: History and Myth

This course is a survey of the eastern forest-steppe frontier of Europe (the territory of what is now Russia, Ukraine, and Belorussia) from its first pagan rulers up to Russian Tsar Peter the Great, covering such themes as Russian Orthodoxy, the Mongol invasion, the growth of the Russian State and the founding of the Russian empire. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 273 History and Culture of Central and Eastern Europe since 1945

This core history course explores the extraordinary story of accommodation, resistance, and oppression in Central and Eastern European societies during the second half of the 20th century and the crucial role that cultural and intellectual forces played from the period of fascist and wartime occupation, through the communist period to the overthrow of communism and the development of new societies in the period 1985 to the present. The course interweaves film from Poland, the Czech and Slovak Republics, and Hungary, historical texts and documents, and memoirs and writings of key dissident intellectuals, such as Vaclav Havel. (Prerequisite: HI 10 or HI 30) Three credits.

HI 274/IL 260 Historical Perspectives on Contemporary Global Crises

This course examines, using topical, geographic, and critical approaches, the interaction of the United States and western Europe with the rest of the world in the 20th century, giving considerable attention to non-Western perspectives such as those of Asia, Africa, Latin America, the Arab world, Russia, and Eastern Europe. The course also includes an introduction to the history of U.S. foreign relations, international organizations, social change in the developing world, and world systems theory. (Prerequisite: HI 10 or HI 30) Three credits.

HI 275 Russia's Road to Revolution, 1689 to 1917

Topics in this course include the modernization of Russia since Peter the Great; the impact of Western culture in the 18th century; Catherine the Great as reformer; intellectual protest against autocracy and serfdom; revolutionary ferment: Slavophiles and Westerners; from populism to Marxism-Leninism; the revolution of 1905; the industrialization of Russia to 1914; and the revolutions of 1917. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 276 St. Petersburg in Russian History

Students explore the history of Russia from Peter the Great to the present through the political, social, and cultural heritage of Peter's city - St. Petersburg - Russia's "window on the west." St. Petersburg served as imperial Russia's capital from 1703 to 1918. After the consolidation of Soviet power, St. Petersburg (as Leningrad) continued to play a key role in 20th-century Russian social, political, and cultural history. The collapse of the Soviet Union in 1991 led to the rebirth of St. Petersburg as a cultural center. The course emphasizes historical sites and cultural accomplishments of St. Petersburg through the use of slides, video, and music. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 277 Mexico: Cortés to NAFTA

Topics in this course include Aztec society on the eve of the Spanish conquest; the nature and techniques of Spanish imperialism; Colonial society - church, state, hacendados, castas, indios; the revolutions for independence (1810-1821); the failure of liberalism in the mid-19th century and the subsequent dictatorship of Porfirio Diaz (1876-1911); the Mexican revolution, 1910 to 1940; and post-revolutionary Mexican society, 1940 to present. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 279 China from Classical Time to the 1800s

To many people China is one of the most mysterious and intriguing civilizations. Its fascinating concepts of philosophy, government, religion, art, and science that formed several thousand years ago continue to influence the modern world. This course examines the history, culture, self-image, world-view, and the ideas and institutions that shaped China and its people from the classical time to the 1800s. It is difficult to cover several thousand years of Chinese civilization in one semester. However, after this course, students should emerge with basic knowledge of Chinese culture and people. This course is an analytical survey of major topics and themes in Chinese history and culture. The format of the course includes lectures, group discussion, debate, and audio-visual presentation. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 280 The West and the Middle East

This course examines Western and Middle Eastern relations from the 18th century to the present, relating recurring upheavals of the Middle East, including conflicts between ethnic-religious groups and economic classes, to structural transformations that have developed across two centuries. Topics include Western colonization and conquest; Middle Eastern nationalism; the Arab-Israeli conflict; the economics and politics of oil; and the Islamic revival. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 281 Portrait of the Arab

This interdisciplinary course provides a broad introduction to Arab culture and society in the past and present, using novels, poetry, films, and scholarly studies to investigate contemporary issues and their relationship to a complex historical legacy. Topics include the formation of Arab identity; the relationship of city and countryside; women and the family; literature; the arts and architecture; and nation building. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 282 Last Empires of the Islamic World, 1400-1923

An introduction to the history of the Muslim empires of the early modern period: the Ottomans, the Safavids/Qajars, and the Mughals. The geographical scope of these three empires extended from Southeast Europe to the Middle East, from Iran to India. The course will examine how these empires were formed at the end of the Middle Ages; how they claimed the universalist discourse of Islam; how they employed innovative administrative and military technology; how they ruled in large and culturally diverse geographies; how they confronted the challenges of European expansion; and how they disintegrated in modern times. (Prerequisite: HI 10 or HI 30) Three credits.

HI 284 20th-Century Russia

This course covers such major themes as the impact of the 1905 and 1917 revolutions; Lenin, War Communism, and the new economic policy; Stalin, collectivization, and the Great Purges; the Russian war experience and the Cold War; Khrushchev, reform, and de-Stalinization; Brezhnev, stagnation, and detente; Gorbachev, glasnost, perestroika, and political and economic crisis; the Revolution of 1987 to 1991; and post-Soviet Russia. Formerly HI 384. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 285 Modern China: 1800 to Present

This course examines the major developments in modern Chinese history from about 1800 to the present to show China's transformation from a semi-colonial country in the 19th century to a major player in world affairs today. Topics include the Opium Wars, the impact of imperialism on China and China's response to it, the revolutionary movements of the first two decades of the 1900s, the rise of nationalism and Chinese Communism, the anti-Japanese War, the history of the People's Republic of China, the current economic reform movement and social changes, and China's role in the new world order. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 286 The Rise of Modern Japan: 1800 to Present

This course examines the transformation of Japan from the late Tokugawa period in the 1800s to the emergence of Japan as a post-industrial society. It focuses on historical forces and events, and on the efforts of Japanese women and men that have shaped Japan's transition from a late developing industrial nation during the Meiji period (1868-1912) to a great economic power in the 20th century. The dramatic social, political, economic, and cultural changes of the 1980s and 1990s receive attention. Students compare Japan's path to modernization with that of the West. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 287 A Green History of Latin America

This course covers the understanding and treatment of human and natural resources in Latin America from the time of triumphant indigenous empires in the 1500s through the colonial Spanish and Portuguese empires, the unstable 19th-century independent republics, the modernizing 20th-century republics, and the neo-liberal empire of the new world order. The course examines how the ruling elites throughout these eras understood and used human and natural resources, how voices of dissent responded to the policies of those ruling elites, and how those voices fared under the elites. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 288 Colonial Latin America, 1492 to 1800

The course examines Indian cultures, Portuguese and Spanish institutions, and values on the eve of the conquests, including the clash of cultures and interests, and three ensuing centuries of New World dialectics: conquistadores, viceroys, colonists, priests, friars, Indian caciques and peasants, black slaves, and free mulattoes mutually interacting and forming, by 1800, a new civilization composed of varying hybrid cultures from the Rio Grande to Tierra del Fuego. The course also considers the Iberian colonies on the eve of the 19th-century revolutions for independence. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 289 Modern Latin America, 1800 to Present

This course examines the successful overthrow of the colonial establishment from 1808 to 1826, two centuries of ensuing political, economic, social, and cultural instability, and the search for a viable social order, emphasizing the elusive search for reform in the 20th century - an age of revolution, counter-revolution, and persistent oligarchies. The failure of the revolutionary experience in Mexico, Chile, and Nicaragua; the current ascendancy of neo-liberalism; and the great cultural achievements of the 20th century receive special consideration. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 293 West Africa and the Making of the Atlantic World, 1444-1880

Traditionally, historians have treated West Africans as passive or unwilling participants in the Atlantic slave trade and the development of the Americas. West Africans have been depicted as pawns who were manipulated and kidnapped into slavery by Europeans. However, since the 1970s, scholars have increasingly recognized the fallacies of these assumptions. Prior to European contact, numerous West African kingdoms, empires, confederations, and smaller polities had developed. These polities were militarily powerful enough to resist European imperial designs until the late 19th century, to prevent Europeans from kidnapping their citizens into bondage and control the slave trade. This course will explore how West Africa contributed to the cultural and economic development of the Atlantic world and consider how European contact and interaction contributed to West Africa's development and underdevelopment. This course engages several historiographical debates to explore how West Africa influenced the cultural and economic development of the Atlantic world. This course meets the world diversity requirement. (Prerequisite: HI 10 or HI 30) Three credits.

HI 294 The Middle East Under the Ottoman Empire

This course will trace the history of the Ottoman Empire from 1500 to 1920. Focusing on the social, cultural and economic topics in the history of the Middle East during the Ottoman Era, it will treat diverse themes including, but not limited to, Islamic law and mysticism, households, slavery, the socio-political role of women and non-Muslims, epidemics, and natural disasters. (Prerequisite: HI 10 or HI 30) Three Credits.

HI 298 Historical Geography

Historical geography applies the tools of geography to the phenomena and events of the past. Maps, statistics, and an understanding of how people interact with the physical world allow the historical geographer to achieve a new perspective on historic events. This class will be grounded primarily in the historical geography of North America, the Caribbean, and Mexico, and will also consider the general topics of history of place, change over time, the nature and uses of maps, and spatial analysis. (Prerequisite: HI 10 or HI 30) Three credits.

HI 299 History Workshop

Designed for majors and minors in history, this course trains students in the skills and methods associated with the discipline of history. Participants will learn to ask good historical questions, design and implement effective research strategies, locate and interpret primary source evidence, understand, evaluate and contribute to historiographical debates, construct sound written arguments with proper documentation, and develop appropriate presentation and oral communication skills. Students will not only come to appreciate the multiple ways history is constructed (by both historical actors and those who write history) but also become equipped with the analytical and research skills necessary to evaluate, interpret, and synthesize historical data and the representational texts that surround them. (Prerequisite: HI 10, HI 30, CL 115 or CL 116) Three credits.

HI 302 History and Memory: Coming to Terms with Traumatic Pasts

Genuine historical understanding requires not only knowledge of what transpired in the past but an appreciation of how perceptions have changed over time. This course introduces students to the complex relationship between history and memory by examining how divisive pasts have been remembered, politicized and, if at all possible, come to terms with the 20th century. The pasts in questions are historical legacies that have been marked by extremity rather than normalcy. They include cases of genocide, such as the Nazi Holocaust and the decimation of Native Americans in the New World, as well as episodes of military conflict such as World War II and the American Civil War. Marked by war, criminality, and death, these historical events have left deep scars upon the collective memories of the nations involved. They are thus excellent case studies for understanding how the past has evolved into the present. (Prerequisites: HI 10 or HI 30, and one 200-level history course) Three credits.

HI 303 What If? Alternate History and the Historical Imagination

What if the American Revolution had failed? What if the South had won the Civil War? What if Hitler had never been born? This seminar investigates why these and other counterfactual questions have increasingly been posed in works of Western popular culture in the last generation. In exploring the recent emergence of "alternate history" as a cultural phenomenon, we examine a wide range of counterfactual novels, films, television shows, comic books, plays, and historical essays in comparative analytical fashion. In the process, we attempt to arrive at general conclusions about how counterfactual narratives help us better understand the roles of causality and morality in history, as well as the broader workings of collective memory. (Prerequisites: HI 10 or HI 30, and one 200-level history course) Three credits.

HI 304 The Holocaust in History and Memory

The Holocaust demands, yet stubbornly resists, historical understanding. This course addresses the Nazis' genocidal assault upon European Jewry and others by examining a wide range of factors that contributed to it. The course explores the roots of modern German anti-Semitism, the origins of Nazism, the establishment of the Nazi dictatorship, the sharpening of anti-Jewish measures during the Third Reich, and the escalation of persecution following the outbreak of World War II that culminated in the so-called Final Solution. Students consider the legacy of the Holocaust after 1945 by examining the postwar struggle to preserve its lessons in memory, the difficulty in finding adequate cultural means of representing its extreme dimensions, and the challenge of understanding the lessons that the event left for the postwar world. (Prerequisites: HI 10 or HI 30, and one 200-level history course) Three credits.

HI 313 Godless: Atheism and Skeptical Thought in the West

The history of atheism –or whether atheism even *has* a history -- is difficult to establish. Scholars have used a narrow definition of the term *atheism* to suggest its origins in the 18th century, or a broad definition to trace its antecedents back to classical antiquity. This course considers atheism within the tradition of skepticism, and leaves open for classroom debate the question of whether the thinkers studied – from Epicurus to Ingersoll, Diderot to Dawkins – represent a coherent tradition or merely a collection of radical challenges, each tied to its own time and place. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 314 Peasant Toil, Peasant Revolt: Daily Life in Rural Europe before 1900

This course examines European peasant life from the Middle Ages until roughly 1900, with particular emphasis on historians' views of the topic. Based on historical studies of the peasantry, beginning with those of a pivotal group of 20th-century French scholars who transformed the study of European history and of history in general, the course considers how peasants lived, worked, and raised families; how they practiced religion; and how they related to political change in their communities. The course introduces students to various important scholars' treatments of peasant culture, and when and how peasants were moved to acts of violence. (Prerequisites: HI 10 or HI 30, and one 200-level history course) Three credits.

HI 315 Ireland Since the Famine

This course is an in-depth examination of political, social, religious, and economic developments in Ireland from 1850 to the present day. Up to 1921 the focus is on the entire island including Ulster. After 1921 the focus turns to the Irish Free State and later Republic (Eire), although developments in Northern Ireland are studied as they compare with the history of the southern republic and as they bear upon relations with it. Students examine the interaction of politics with religious and ethnic divisions, international relations, economic conditions, and cultural patterns, including education and social mores. (Prerequisites: HI 10 or HI 30, and one 200-level history course) Three credits.

HI 316 The French Revolution and Napoleon

The course considers the causes of the Revolution, the move from moderate to radical change, the dynamics of the Terror, the roots of counterrevolution, and the reaction that led to military dictatorship. It also analyzes Napoleon's career, the basis of his empire and its relationship to the satellite kingdoms, and the effects of French hegemony upon Europe. (Prerequisites: HI 10 or HI 30, and one 200-level history course) Three credits.

HI 317 Religious Outsiders in Early Modern France and Europe

The course explores the role of religious minorities, including Protestants, Jews, and Catholic splinter groups, from 1492 to the French Revolution, with emphasis on the political and social aspects of each group's existence. Students examine images of religious minorities and forms of oppression and persecution to determine the boundaries of authority and the nature of belonging in European society, and how these aspects were changing during this period. Students use primary and secondary sources. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 323 England: Reformation to Revolution

This course examines the changes in church, state, and society that took place in the British Isles from the accession of Henry VII to the death of Queen Anne. These centuries saw the unification of England, Ireland, and Scotland under a single government, the development of that government from feudal kingship into Parliamentary-based bureaucracy, and the shattering of medieval Catholicism into a variety of different churches and doctrines. The course also examines the structure of Tudor-Stuart society and the cultural changes resulting from the Renaissance and the Scientific Revolution. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 324/CL 324 Ancient Greece, Rome and Africa

The course examines the interaction between Greco-Roman civilization and ancient African civilizations, in the period from the sixth century BC to the sixth century AD. Focus is on: initial contacts between mainland Greece and Pharaonic Egypt; the period of Greek rule in Egypt and subsequent Greek expansion in Sudan and the Red Sea; initial contacts between Republican Rome and North Africa, and subsequent Romanization in that region; the period of Roman imperial rule in Egypt and subsequent Roman expansion in Sudan and the Red Sea; and the Byzantine diplomatic interaction with and role in Christianization of Nubia and Axumite Ethiopia. This course meets the world diversity requirement. (Prerequisites: CL 115, CL 116, HI 10 or HI 30, plus one 200-level history course) Three credits.

HI 325/CL 325 Athenian Democracy and Empire

This history seminar provides an in-depth exploration of classical Athens at the height of its power in the fifth century BC. Its focus is on close reading of the primary sources describing the rise and fall of Athens in this period. It places particular emphasis on the parallel rise of Athenian democracy at home and the Athenian empire overseas. It places secondary emphasis on the nature of Athenian intellectual discourse in this period. A final research project will engage modern scholarly debates on the nature of fifth-century Athens. (Prerequisites: HI 10 or HI 30, and one 200-level history course) Three credits.

HI 331 The American Revolution and the New Nation

An examination of the coming of the American Revolution and the transition from colonial to national status, this course discusses the military struggle itself and provides an assessment of the political, social, and economic effects of the Revolution. Topics include the Confederation period, the forming of the 1787 Constitution, and the Federalist era. Figures such as John Adams, Tom Paine, Jefferson, Hamilton, Madison, and Washington receive special attention. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 335 Civil War and Reconstruction

The principal goal of this seminar will be to familiarize students with some of the most important aspects of the Civil War and Reconstruction period in the United States, including the close examination of some of the more important historiographical debates. Topics include: sectionalism, antebellum political parties, slavery, abolition, Civil War politics, Presidential and Congressional Reconstruction, and Redemption. Students will use primary and secondary resources to produce a significant research paper. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 337 Race, Violence and Punishment in the United States 1865-1976

Beginning with Black Reconstruction in the South and ending with the Supreme Court's temporary ban on capital punishment in *Furman v. Georgia* (1972), this intensive reading, writing, and research seminar explores the history of lynching, capital punishment, and other forms of racial violence in the United States. Using primary sources, it charts the spread of extra-legal violence in the aftermath of the American Civil War to understand the social, economic, and political forces that fueled such violence. It explores the complex relationship between lynching and capital punishment through the eyes of contemporaries as well as through the research of scholars. Students will also engage in a semester-long project to research, record and document instances of lynching, extra-legal violence, and capital punishment as part of a final research paper. (Pre-req: HI 10 or HI 30, and one 200-level History course) Three credits.

HI 338 The Long Black Freedom Struggle

This seminar explores the history of the varied local, national and international protest movements that contributed to what historian Hassan Jeffries has called the long "Black Freedom Struggle." While recognizing the boundaries of time and space, it explores connections between various efforts by African Americans to win freedom and equality in the late 19th century with protest movements of the 20th Century. The course not only examines key figures, major organizations, and ideologies of various protest organizations but also uncovers the social, political, and economic issues that mobilized African Americans and their allies in the fight against American Apartheid. (Prerequisite: HI 10 or HI 30, and one HI 200-level.) Three credits.

HI 342 Immigration, Ethnicity, and Race in U.S. History

This thematically arranged intensive reading, writing, and discussion seminar on the history of U.S. immigration in the 19th and 20th centuries situates the United States within the context of global migration patterns and economic development. Students investigate patterns of migration and community settlement, family strategies of survival and adaptation, and immigrant cultures. They analyze how successive groups of immigrants were received by U.S. society by examining the origins and effects of recurrent waves of racism, nativism, and ethnic and class antagonism that pervade American history. This course meets the U.S. diversity requirement. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 348 Social Movements in U.S. History: The 1960's

This research seminar explores the social history of grass-roots movements in the 1960's United States and their effect on the contours of formal politics in American history. The course examines political processes such as pressure-group activity within the two-party structure, grass-roots political action, the rise of third parties and alternative ideologies, as well as the development, transmission, and change of popular political culture; the effects on politics of organization in other arenas; and the importance of racial and ethnic identities in American politics. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 356 History of the Cold War

This intensive reading, writing, and discussion seminar focuses on the origins, deepening, and decline of the Cold War between the United States and the Soviet Union from 1917 to 1991, covering such issues as Lenin-Wilson ideological antagonism, the shift from Grand Alliance to Cold War, the arms race, the rise and fall of detente, and the collapse of the Cold War order in Europe and the Soviet Union from 1989 to 1991. The course attempts to approach the topic by understanding both sides of the conflict, studying decisions, policies, and actions in a bilateral fashion. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 366 Gender, Culture, and Representation: Women in China and Japan 1600 to Present

Are Chinese and Japanese women mere victims of a patriarchal society? Do socialist revolution and industrial modernization liberate women? This seminar examines those questions by studying the historical changes and continuities in the experience of women in China and Japan from approximately the 17th century to the present. The construction and representation of gender relations in China and Japan represent complex processes with many changes. Using verbal and visual texts, this course considers women's lives and their struggles to represent themselves in both societies as well as the historiography on those subjects. This course meets the world diversity requirement. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 367 East Asia in 20th-Century American Wars

During the 20th century the United States fought three wars in East Asia: the Pacific War, the Korean War, and the Vietnam War. How did the East Asians perceive and react to the wars? How did the wars affect people's lives and societies in East Asia? How did the wars affect postwar relations between the United States and East Asia? Did race, culture, and ethnicity play significant roles in these wars? This course examines those questions by studying East Asia in the three American wars as an oral and social history. The course focuses on the human dimensions of the wars as experienced by those East Asians who fought and lived through them. This course meets the world diversity requirement. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 371 Arab-Israeli Conflict

The course traces the Arab-Israeli conflict from the end of the 19th century until the present, emphasizing the political and socioeconomic transformation of Palestine as Zionists and Palestinian Arabs struggled for political sovereignty in the same land. Topics include Anti-Semitism and the Birth of Zionism; the British Mandate; the creation of Israel; the relationship between Israel and the Arab states; the Israeli occupation of the West Bank and Gaza; the rise of the Palestinian resistance; Israel's war in Lebanon; and prospects for the future. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 372 Terrorism in History

This course examines terrorism as it has been perpetrated by individuals, political-military groups, and states of varying political ideologies. Topics include political violence in antiquity and medieval times; the French Revolution; terrorism, anarchism, and Marxism; terrorism and national liberation; and terrorism and religion. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 385 Comparative Russian Revolutions

An intensive reading, writing and discussion seminar studying in some depth the background, origins, development, and outcomes of two Russian revolutionary periods of the 20th century: the interrelated upheavals of 1905 to 1917, resulting in the overthrow of the tsarist regime and its replacement by the Bolsheviks; and the reform, collapse, and transformation of the Communist government of the Soviet Union from Mikhail Gorbachev to the present. In the process of two in-depth examinations, the course explores contrasts among the social, economic, political, and cultural forces at work in the two revolutionary periods. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 391 The Meanings of History

This upper-division seminar for juniors and seniors analyzes the ideas of seminal Western and non-Western thinkers - historians and philosophers who have had a profound influence on historical understanding and the practice of historians. Topics include the following questions: What is history? To what extent has the understanding of history changed in various times, places, and cultures? Are "scientific" history and the discovery of objective truth possible? Do stable civilizational identities exist and what value do such concepts have for historical understanding? The course examines the contemporary political, social, and cultural relevance of these and comparable questions through intensive readings, discussions, and analytical papers. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 392 Fundamentals of Geographic Information Systems (GIS)

A first course in Geographic Information Systems (GIS), emphasizing the development of computer skills and an appreciation of the spatial dimensions of problem-solving. Given that "spatial thinking" is a frequently desired and needed skill in many professional fields, including history, this course will offer regular examples of historical-geographical problems and solutions, and require the design and execution of a research project in each student's area of interest. The course will necessarily include a significant quantitative component, and some familiarity with statistical methods is recommended, though not required. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 395 History Internship

Majors work a minimum of eight hours per week during the semester at the Fairfield Museum and History Center, the Bridgeport Public Library Historical Collections, or a similar institution. An intern's work at these sites may include researching and mounting an exhibit, cataloging manuscript and artifacts collections, or organizing and conducting historical walking tours. Training in required skills is provided at the site. Under the supervision of a history department faculty member, interns write a research paper based on the work of the internship. Open to juniors and seniors as available, by permission of the department Internship Coordinator. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 397 Special Topics in History

This course offers an in-depth investigation of a significant historical problem or topic, conducted in a seminar format. The professor teaching the course chooses the topic. The course is limited to 15 junior- or senior-level students. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

HI 399 Independent Study

Open to juniors and seniors only, this course provides an opportunity for advanced students to develop critical reading skills and writing ability in a tutorial arrangement with a chosen professor. Normally, the course results in a serious paper of publishable quality in student-centered journals (15 to 20 pages). Students arrange for independent study during registration period of the semester prior to the one in which they wish to take the course by applying to a professor under whose direction they wish to study. All independent study must have the concurrence of the department chairperson. Students may take only two independent studies. (Prerequisites: HI 10 or HI 30, and one 200-level course) Three credits.

Honors Program

Associate Director

Rakowitz (Psychology)

Advisory Board

Drake (Philosophy)

Garvey (English)

Harriott (Biology)

Patton (Politics)

Scheraga (Business)

The Honors Program at Fairfield University is an interdisciplinary course of study open to invited freshmen and sophomores from all of the University's undergraduate schools. Since the program offers a curriculum of team-taught courses and small seminars, it is highly selective. Students who pursue Honors study at Fairfield are highly motivated, passionate about learning, and willing to engage their professors and fellow students in lively discussions about the great ideas that have shaped our culture and world cultures. Honors students at Fairfield also are invited to attend intellectual and cultural events outside the classroom such as Broadway plays, guided museum tours, operas, and faculty-led colloquia on a variety of topics.

The Honors curriculum challenges students to achieve the following educational goals:

- to become culturally literate in the Western tradition by studying some of its "great ideas" as expressed in the humanities, the arts, and the social and natural sciences;
- to appreciate challenges to the Western intellectual tradition either by considering critical voices traditionally marginalized in that culture or by investigating the assumptions of a non-Western culture;
- to learn to make connections between disciplines, and to learn to ask the larger questions that transcend any single discipline; and
- to bring the honors experience to bear on the field of their chosen major at a high level of accomplishment through the completion of a research project appropriate to the particular discipline.

Curriculum

The Honors Program comprises 23 credits. Twenty credits are earned through six Honors courses completed in the first three years of the program (HR 100, HR 101, HR 200 or HR 201, 2 sections of HR 202, HR 300); the program recognizes three credits earned through an independent study usually undertaken in the student's major during the senior year.

Students who complete the Honors Program are exempt from 21 credits in the core curriculum.

Students who enter the program as freshmen are exempt from the 3 English core courses (9 credits). They also may exempt themselves from 4 courses chosen from the following 6 areas or disciplines, with no more than 1 exemption claimed in any area or discipline: Natural Science, History, Social/Behavioral Science, Philosophy, Religious Studies, and Visual and Performing Arts (4 courses, 12 credits). In choosing to fulfill their remaining core requirements in Applied Ethics, History, Philosophy, and Religious Studies, Honors students may enroll in 200-level courses without having taken the stipulated prerequisites.

Students who enter the program as sophomores and who have completed EN 11 and EN 12 are exempt from the third English core course (3 credits). They are also exempt from 1 course in each of the following 6 areas or disciplines: Natural Science, History, Social/Behavioral Science, Philosophy, Religious Studies, and Visual and Performing Arts (6 courses, 18 credits). In choosing to fulfill their remaining core requirements in Applied Ethics, History, Philosophy, and Religious Studies, Honors students may enroll in 200-level courses without having taken the stipulated prerequisites.

The student's second year of Honors course work will satisfy either the U.S. diversity requirement (HR 200) or the world diversity requirement (HR 201) depending on the course the student completes. Apart from fulfilling 1 diversity requirement and replacing 7 core courses, Honors courses cannot be double-counted to satisfy any other curricular requirement.

Students who complete the Honors Program in good standing have their achievement noted on their final transcripts. Those who complete the program with an average grade of B+ in Honors courses receive the designation "University Honors Program Completed with Distinction." Those who complete the program with an average of A in Honors courses receive the designation "University Honors Program Completed with High Distinction."

Fulbright Track in Honors

The Honors Program offers an alternative ordering of courses to support Honors students who apply for the prestigious Fulbright Scholarship. This "Fulbright track" in the Honors curriculum allows Fulbright applicants to complete their Senior Honors Projects in their junior year so that this research can provide a foundation for their Fulbright applications. Honors students who are interested in the Fulbright track should speak to the Honors Program Director.

Course Descriptions

First Year:

The Western Tradition

HR 100 Ideas That Shaped the West

This team-taught lecture/seminar course examines selected ideas or themes from Western intellectual history, focusing on developments in philosophy, society, science, and the arts. The ideas selected vary from course section to course section. Four credits.

HR 101 Minds and Bodies

This team-taught lecture/seminar course examines constructions of the human person, and the social reflections of these constructions, in Western culture. The ideas selected vary from course section to course section. Four credits.

Second Year:

Beyond the Western Paradigm

HR 200 Challenges to the Western Tradition

This course examines alternatives to the configuration of knowledge, art, power, and justice in the classical, majority culture of the West by considering critical voices traditionally marginalized in that culture. In the second year of honors coursework, students complete either HR 200 or HR 201. This course meets the U.S. diversity requirement. Three credits.

HR 201 Non-Western Culture

This course examines alternatives to the configuration of knowledge, art, power, and justice in the classical, majority culture of the West by investigating the history, worldview, and assumptions of a non-Western culture. In the second year of honors coursework, students complete either HR 200 or HR 201. This course meets the world diversity requirement. Three credits.

HR 202 Honors Seminar

This seminar, offered in one of the traditional disciplines, seeks to cultivate the skills of critical thinking, cogent argumentation, and effective writing, all by attending to a particular subject matter. Honors students earn six credits in HR 202 by completing one version of the seminar in their second year of honors coursework and another version of the seminar in their third year of honors coursework. A complete title, reflecting the seminar's particular subject matter, appears on the student's transcript. Students may not enroll in any section of HR 202 offered in a discipline in which they major or minor. Three credits.

Third Year:

Interdisciplinary Inquiry

HR 300 Interdisciplinary Inquiry

This team-taught course stresses the value of interdisciplinary approaches to scholarly inquiry by investigating a wide-ranging theme from the perspective of at least two disciplines. Possible themes treated in a given year are progress and its critics, genius and creativity, and the city in the American imagination. Three credits.

HR 202 Honors Seminar

This seminar, offered in one of the traditional disciplines, seeks to cultivate the skills of critical thinking, cogent argumentation, and effective writing, all by attending to a particular subject matter. Honors students earn six credits in HR 202 by completing one version of the seminar in their second year of honors coursework and another version of the seminar in their third year of honors coursework. A complete title, reflecting the seminar's particular subject matter, appears on the student's transcript. Students may not enroll in any section of HR 202 offered in a discipline in which they major or minor. Three credits.

HR 399 Senior Honors Project: Independent Study

The senior honors project provides an opportunity for students to engage in mature research under the supervision of a faculty mentor. The senior honors project is not a course in its own right but an independent study of three credits, typically conducted in the student's major field of study, which is recognized toward the completion of honors requirements. In the humanities, the project should be a paper of at least 25 to 50 pages in length. In studio art and creative writing, the project should take the form of a significant portfolio. In the natural sciences, mathematics, social sciences, nursing, and in the various areas of business, the finished project should conform to the discipline's acceptable format and length for publication. Three credits.

Individually Designed Major

Director

Im (Associate Dean, CAS)

Individually Designed Major Committee

Biardi (Biology)

Brill (Philosophy)

Serazio (Communication)

Program Description

The Individually Designed Major (IDMJ) allows qualified students in the College of Arts and Sciences, under appropriate direction of at least two faculty advisors, to design and pursue an interdisciplinary major presently not available in the College.

The Individually Designed Major is, as its name implies, a major designed by the student. It must be a true major, with a progression of courses, including an appropriate number of advanced courses. It cannot be a simple collection of introductory courses in several disciplines. The major may be an extension of a presently existing interdisciplinary minor, or it may be a wholly new subject, e.g. Social Justice in Latin American Culture.

Courses already taken may be included in the major, but the IDMJ should be, as a whole, a planned endeavor, not simply the pulling together of courses already taken. For this reason application must be completed and approved by the IDMJ Committee no later than the end of the student's second year.

Course Requirements

- The major requires a minimum of ten courses.
- The major must be truly interdisciplinary. While there may be a primary department, at least four courses must be taken outside that department.
- The major requires a suitable number of advanced courses.
- The major also requires a senior project (seminar, capstone course, supervised lab, or whatever is appropriate for the relevant disciplines). The purpose of this project is to allow students to pull together the multiple threads of the interdisciplinary major.
- Finally, the major requires that the student maintain a portfolio for the purpose of a reflective review and self-assessment of the progress and changes in direction, if any, of the major. The student will use these materials as part of a progress review with advisors at least once a semester. The student must also submit a final assessment of the major to the Individually Designed Major Committee as a requirement for graduation.

Eligibility

To be eligible, the student must have a GPA of at least 3.0 at the time of application. Applications and information may be obtained from the office of the Dean of the College of Arts and Sciences. If you are interested in pursuing this major, please schedule an informational meeting with the IDMJ program director at your earliest convenience.

The International Studies Program at Fairfield University draws from a group of interdisciplinary faculty, practitioners and students from many parts of the world with a commitment to thinking critically about global challenges, promoting social justice, and service. Students have opportunities to pursue a major or minor in International Studies in the College of Arts and Sciences or an innovative co-curricular program in International Business with a complementary major or minor in the Dolan School of Business (consult catalog entry for Dolan School of Business). The Program seeks to heighten global awareness in the ways we situate ourselves geographically, and encounter conflict, gender, race, class, nationality, the environment, and development.

International Studies Major

Requirements

Students majoring in International Studies begin with foundational coursework in international relations, economics, geography, and sociology/anthropology, and complete their degree requirements with a senior research project. To prepare for this, they develop their own specialization drawing on courses in the thematic areas of Global Development; Conflict, Diplomacy and Peace Building; and Humanitarianism and Social Justice. The challenges and perils that face the global community are multifaceted and complex. Students acquire different sets of knowledge, tools, and perspectives to deal with the complexities that face local to global communities.

Complementary Studies and International Opportunities

Students complement their International Studies major with coursework in related departments like politics, economics, sociology, history or foreign languages, and in the Dolan School of Business. Many students also pursue related interdisciplinary programs, such as environmental studies, women's studies, peace and justice, and area studies with which International Studies works especially closely. They also study economics and business emphasizing multinational organizations and regional trade pacts, economic and political systems, socio-cultural structures, microfinance and diversities that have operational significance for community and economic development and international business.

The International Studies Program reinforces multidimensional learning with real-world experience through language studies, service learning, Model United Nations, the Undergraduate Journal of Global Citizenship, internships, and study abroad opportunities, and through work with our faculty in research projects and as student teaching assistants.

Graduation with Honors in International Studies

Fairfield University has a campus chapter of Sigma Iota Rho, the national honor society for international studies. Students must have attained a junior standing and completed at least twenty-one hours of course work toward the International Studies/Business major, and nine hours towards the International Studies minor. Students with an overall GPA of 3.3 or greater and a GPA of 3.4 or higher in their International Studies/Business major or International Studies minor are nominated for membership.

Requirements

International Studies Major

For a major in International Studies through the College of Arts and Sciences, students:

1. Complete the following foundational courses in the major:

- IL 50 People, Places and Global Issues
- IL 51 International Relations: Theories and Challenges
- IL 52 Culture and Political Economy
- IL 53 Introduction to Economics (or EC 11 and EC 12, as required for International Business majors)
- IL 300 Senior Capstone Seminar

2. Complete 15 credits of electives selected from any three thematic areas, with at least two theory and two applied courses, to develop a specialization in International Studies. These electives may be taken any time during the student's undergraduate studies, though students may wish to spread these courses over their junior and senior year. Students in study abroad may take approved courses to satisfy these electives. However, students are encouraged to complete IL 50, 51, 52, and 53 in their Freshman and Sophomore years, as described below. Students may also complete 15 credits of electives through a self-designed study, with approval of the director.

Suggested Course of Study

Freshman Year

- IL 50

Sophomore Year

- IL 51 or 52 (take both in sophomore year if studying abroad in junior year)
- IL 53 (usually offered in the Fall Semester)

Junior Year

- IL 51 or 52
- Choose 5 electives from the thematic areas (at least two theory and two applied courses)

Senior Year

- Complete any remaining electives from the thematic areas (at least two theory and two applied)
- IL 300 Capstone

International Studies Minor

The College of Arts and Sciences offers a six-course, 18 credit minor in International Studies consisting of:

- IL 50 People, Places and Global Issues
- IL 51 International Relations: Theories and Challenges
- IL 52 Culture and Political Economy
- IL 53 Introduction to Economics (or EC 11 and EC 12)
- Two electives from the thematic areas, with one theory and one applied course.

International Business Major

For B.S. in International Studies through enrollment in the Dolan School of Business, please see pg. 315.

Course Offerings

Foundational Courses

IL 50 People, Places and Global Issues
IL 51 International Relations: Theories and Challenges (cross-listed with PO 130)
IL 52 Culture and Political Economy (cross-listed with AY 52)
IL 53 Introduction to Economics
IL 300 Capstone

Electives

Global Development - Theory Courses

EC 230 Comparative Economic Systems
EC 231 International Trade
EC 233 International Economic Policy and Finance
EC 235 Economic Development of Third World Nations
MG 350 International Law
PO 134 Globalization: Who Rules the World?
PO 149 Third World: Common Fate? Common Bond?
SO 190 Globalization
SO 191 Social Change in Developing Nations

Global Development - Applied Courses

IL 280 Global Leadership for Research and Project Development
IL 298 Internship
IL 299 Independent Study
LAC 300 Justice and the Developing World
MG 385 Managing People for Global Business
SO 185 International Migration and Refugees

Course Descriptions

IL 50 People, Places and Global Issues

This course introduces students to some of the fundamental concepts of International Studies. Major world regions and selected countries within them are discussed with respect to the people, and their physical, demographic, cultural, political, and economic characteristics. Several concepts and global issues are explored, among which the physical environment, conflict, inequality, global interconnectedness, and the movement of goods and people across borders are central. This course will emphasize contemporary events, particularly as they relate to the fundamental themes covered. The course meets the world diversity requirement. Three credits.

IL 51/PO 130 International Relations: Theories and Challenges

This course introduces International Relations (IR) theories to students, providing concepts, frameworks and approaches that will help them make sense of global politics historically and today in a systematic and critical manner. The goal of the course is to familiarize students with these tools and to help them use them to understand and address challenges at a global scale, particularly different manifestations of violence, development and social injustice, including from war to economic, social, gendered, and political marginalization. Three credits.

IL 52 Culture and Political Economy

This course examines the ways in which global political economic dynamics impact local cultures. Students will begin with classic texts in social theory, examine how this theory informs contemporary debates, and look to small-scale societies in the Global South for an intimate, ethnographic perspective of our global era. Three credits.

IL 52/AY 52 Culture and Political Economy

This course examines the ways in which global political economic dynamics impact local cultures. Students will begin with classic texts in social theory, examine how this theory informs contemporary debates, and look to small-scale societies in the Global South for an intimate, ethnographic perspective of our global era. Three credits.

IL 53 Introduction to Economics

This course introduces the fundamentals of economic analysis from individual consumer behavior to the choices firms make, as well as framing the aggregate economy and indicators that measure global economic activity. It will cover the basics of both micro and macro economic study. Supply and demand, market structures, international trade, fiscal, and monetary policy are introduced. Three credits.

IL 150 International Operations of Non-Profits

This course introduces students to the environment of international not-for-profit organizations. The course examines the relationships between non-profits and the private and public sectors. Accountability is discussed in terms of short-term financial efficiencies and long-term program quality assessment. Course objectives include understanding internal and external environments in which non-profits operate; the relationship between non-profits with the public and private sectors; acquiring skills for accounting and financial information in the non-profit sector; understanding roles, performance and accountability issues of nongovernmental organizations in international development assistance; and developing case study analyses. Three credits.

IL 151/PO 136 Gender, War, Peace

This course examines the complexities and gendered impact of war on children, family and other social actors, drawing on a wide range of theories, concepts and case studies on violence, conflict escalation and peacebuilding. Part I examines the multifaceted forces of globalization, structural violence and gender based violence (GBV) that set up the gendered dynamics of war. Part II draws from this framework to understand the fluid contexts of gender and violence in war, including sexual violence. It looks at how people try to remain safe from armed conflict and marauding bands of rebels or soldiers, and the difficulties of sorting victim from perpetrator. Part III examines theories of social justice in the aftermath of war, and policies that can lead to improved security, safety, health, rehabilitation and reconstruction. Course requirements include exams and a research paper on the theory and policy implications of gender in war and its aftermath. The course meets the world diversity requirement. Three credits.

IL 152 International Human Rights

This course is devoted to an examination of basic human rights philosophy, principles, instruments and institutions. It introduces students to the origins and development of international human rights; the need to apply and enforce legal obligations and establish accountability for human rights violators; and the procedures enforced by the international community for human rights violation. Students will engage in focused discussions and debates on contemporary issues of human rights, such as Environmental Rights, Women's Rights, Rights Against Trafficking, and Economic Rights. The final part of the course includes a special focus on U.S Foreign Policies on Human Rights, concluding with Guantanamo. As part of the research requirements of the course, students will focus on human rights for which they want to be advocates and/or in which they want to be engaged. Three credits.

IL 197 United Nations Security Council Crisis Simulation

This course gives students a hands-on learning experience in world diversity by simulating a United Nations Security Council crisis in international peace and security. The objective is to introduce students to the challenges of global governance in light of the different perspectives they encounter representing different constituencies of the UN Security Council who come from diverse cultural, historical, and geo-political regions of the world. A key goal of the course is to bring to light whether and how power disparities limit the global South's effective representation, and the stakes in reform of the Security Council. While the topic of the simulation will vary, the focus is on a crisis in a non-Western region of the world. This course meets the world diversity requirement. Three credits.

IL 260/HI 274 Historical Perspectives on Contemporary Crises

Using topical, geographic, and critical approaches, this course examines the interaction of the United States and Western Europe with the rest of the world in the 20th century, giving considerable attention to non-Western perspectives such as those of Asia, Africa, Latin America, the Arab world, Russia, and Eastern Europe. The course includes an introduction to the history of U.S. foreign relations, international organizations, social change in the developing world, and world systems theory. Three credits.

IL 280 Global Leadership for Research and Project Development

The course equips students to prepare prestigious international grants and fellowship projects that will make a difference in the world. Students develop their own ethical global imagination on transformational leadership. The course covers a variety of theoretical approaches and methodologies for research and project development informed by feminist, gender, cultural competency, power, race, class, ability/disability, and critical pedagogical perspectives. The students choose the grant or fellowship that is the focus of their project, along with the particular topic (puzzle) and research question. (Prerequisite: junior standing or permission of instructor). Three credits.

IL 295 Seminar in International Studies

The course examines special topics in international studies. The specific topic for a given semester is announced at the time of registration. The course may be repeated with permission of the program director. Three credits.

IL 298 Internship in International Studies

Students accept placements with local organizations, government agencies, or non-profit organizations in positions with an international component. Interns learn to apply knowledge acquired in their course of study to real-world situations. Completion of the internship requires regular meetings with the supervising faculty member, submission of a work log, and one paper. Note: Students complete the internship in addition to the basic requirements for the major or minor. (Prerequisites: junior or senior status and a 2.8 GPA) Three credits.

IL 299 Independent Study

Students pursue an independent research project on international issues under the supervision of a faculty member. Open to juniors and seniors with the director's permission. Three credits.

IL 300 Senior Capstone Seminar

This course requires students to theorize and analyze emerging trends in the political, socio-cultural, economic, and business dimensions of global affairs, and develop the implications in a particular context or setting. Students undertake a major research project as a central activity in this course drawing on the expertise and research methodologies they have developed in International Studies. This course is offered the senior year after students have completed all core courses in international studies. Three credits.

The Irish Studies program explores various aspects of a culture that has produced the oldest vernacular literature in Europe, a rich tradition of Celtic art, and a devotion to scholarship that perhaps was crucial in saving Western civilization. As a nation, Ireland has had a long, turbulent, and fascinating history and politics. In the last fifty years, Ireland has changed from a conservative, agricultural country to a modern, technologically innovative one, from a colony of Great Britain to a free, democratic republic, and from one of the poorest nations in the world to one of its most prosperous.

Irish Studies at Fairfield affords students the opportunity to investigate the contributions of Ireland to the world in terms of its literature, history, politics, film, and art. Now affiliated with the National University of Ireland, Galway, the Irish Studies program, through study abroad, also allows students to take Irish-focused courses in archaeology, economics, the Irish language, music, sociology, and politics.

Requirements

For a 15-credit minor in Irish Studies, students:

Complete five three-credit courses including one of the following:

- EN 161 Irish Literature, HI 215 History of Ireland, Middle Ages to the Present, or HI 315 Irish History from the Famine to the Present.
- Those who choose EN 161 may take up to two additional English courses and must take the remaining two courses in different fields.
- Those choosing HI 215 or HI 315 may take up to three additional courses in English, with the remaining course in a field other than English or history.
- Notes: Subject to the Irish Studies Program Director's approval, students may apply up to 9 credit hours taken while studying abroad in Ireland during the fall or spring semesters toward the minor's requirements. English credits earned (as EN 369) during Fairfield University's two-week Galway Summer Experience at the National University of Ireland, Galway may be counted as EN 161.

While studying abroad is not required for completion of the Irish studies minor, students are encouraged to do so.

Studies courses are offered in a variety of fields and disciplines. Please contact the program director for a course list and course descriptions. Some available courses are:

AH 121 Celtic and Early Irish Art

AH 221 The Arts of Ireland and the British Isles, 500-1000

AS 327 The Irish in American Film

EN 142 Myths and Legends of Ireland and Britain

EN 161 Irish Literature

EN 162 Irish Women Writers

EN 252 Topics in Modern and Contemporary Irish Literature

EN 319 James Joyce

HI 215 Ireland from the Middle Ages to the Present

HI 315 Ireland Since the Famine

PO 147 Northern Ireland: The Politics of War and Peace

PO 151 Politics of the Immigrant: The Irish Catholic and the East European Jewish Communities

Program in Italian Studies

Faculty

Director

Carolan (Modern Languages and Literatures)

Professor of the Practice

Diaz (Modern Languages and Literatures)

Advisory Committee

P. Eliasoph (Visual and Performing Arts)

Long (Philosophy)

The Italian Studies Program focuses on a nation and people whose contribution to civilization has been significant. Virtually every area of the arts, humanities, social sciences, natural sciences, and mathematics partakes of that heritage, while Italy continues to influence cultural, political, scientific, and economic trends today.

Italian Studies at Fairfield offers students an opportunity to explore, analyze, and appreciate Italy from the perspectives of a variety of academic disciplines, including language, literature, film, art history, architecture, politics, history, philosophy, religion, science, and business. This interdisciplinary program includes courses offered in Connecticut and at Fairfield University's campuses in Florence.

Requirements

To complete a 15-credit minor in Italian Studies students must demonstrate ability in the Italian language through the intermediate level.

The language of modern Italy is Italian. Inasmuch as cultural mores and concepts are reflected and communicated in language, students must achieve minimal proficiency in the language to begin to access the richness and complexity of Italy. Hence, all students pursuing the minor must meet this language expectation by successfully completing IT 211, Intermediate Italian, or by passing a placement test administered by University faculty that verifies competency through the intermediate level. Note: Completion of this requirement is not considered a prerequisite for coursework in the minor. Instead, students are permitted to begin minor coursework during or prior to fulfilling the language requirement.

At least four of the five required courses must be Italy-focused (dealing exclusively with Italy) or Italian language and literature courses numbered 211 or higher. The fifth course may be another Italy-focused course or it may be an Italy-component course in which at least half of the course material deals with Italy. Note: No more than three of the five courses may be completed in a single discipline.

While study abroad is not required for completion of the minor, participation in the University's programs in Florence, Italy (fall, spring, or summer sessions) is strongly encouraged. Italian studies courses are offered in a variety of fields and disciplines. A complete list of Italy-focused and Italy-component courses is available from the program director.

Course offerings:

Modern Languages and Literatures

IT 110-111 Elementary Italian

IT 210-211 Intermediate Italian

IT 220 Topics in Language and Culture (replaces IT 223)

IT 233 Creative Writing

IT 253 Contemporary Italian Culture

IT 255 The Novella

IT 262*/EN 116 Rome in the Cultural Imagination

IT 271*/FM 103 Italian Cinema/World Cinema

IT 289/EN 115* Dante

IT 330 Redefining the Cosmos: Voyages to the New World in the Italian Renaissance

IT 381/IT 382 Coordinating Seminar/Independent Study

IT 393* ** Italian American Experience

*Taught in English

**Counts toward the U.S. diversity requirement

History

HI 203 European Society in the Middle Ages

HI 222 Roman Revolution

Dewan (Religious Studies)

Ostrow (English)

Dating back nearly 4,000 years, Judaism is the world's oldest monotheistic faith and the foundation of both Christianity and Islam. Studying Judaism is thus central for understanding the roots of Western Civilization. The Judaic Studies minor at Fairfield University is an interdisciplinary program, primarily based in the Departments of Religious Studies and History. In addition to its undergraduate courses, the Judaic Studies program also presents campus-wide lectures and other special events in cooperation with the University's Carl and Dorothy Bennett Center for Judaic Studies.

Requirements

For a 15-credit minor in Judaic studies, students:

- Complete five three-credit courses. At least two of these courses must be taken in the Department of Religious Studies; at least one course must be taken outside of the department.

Students may structure their own course of study in consultation with the program director, but they are expected to gain an understanding of basic Jewish religious beliefs and practices as well as those political, social, and cultural forces that have helped shape the historical experiences of the Jewish people.

Independent study and internships are encouraged and can be substituted for any course (other than the two required religious studies courses) with the approval of the program director. Students are also encouraged to apply for summer, and semester - or yearlong programs in the United States or Israel, especially those offering Hebrew language study. Students receiving credit for such programs and/or Judaic studies courses taken at another university may count up to six Hebrew language credits and three additional credits toward the Judaic studies minor.

Course Offerings:

Religious Studies

RS 101 Exploring Religion (only sections taught by Dewan or Harkins)

RS 201 Hebrew Bible/Old Testament

RS 205 Women in the Bible

RS 209 Jewish Interpretations of Scripture

RS 210 Introduction to Judaism

RS 211 History of the Jewish Experience

RS 213 Jews and Judaism in America

RS 215 Women in Judaism

RS 218 Faith After the Holocaust

RS 300 Second Temple Judaism and the Dead Sea Scrolls

RS 301 Religious Diversity in Early Judaism and Christianity

RS 315 Modern Jewish Theology

English

EN 113 Literature of the Holocaust

History

HI 205 Antisemitism: Medieval to Modern

HI 210 The Third Reich

HI 212 Modern Germany: From Reich to Republic

HI 214 Modern Jewish History: 1750-Present

HI 304 The Holocaust in History and Memory

HI 317 Religious Outsiders in Early Modern France and Europe

HI 342 Immigration, Ethnicity, and Race in U.S. History

Fairfield University's commitment to a humanistic perspective and to the concept of social justice requires that Fairfield students be introduced to the "other" Americans who inhabit this hemisphere. The vibrant cultures of the Caribbean and Central and South American nations, blending indigenous, European and African influences, provide a rich field of study that can be approached from many points of view.

The Program in Latin American and Caribbean Studies offers students an interdisciplinary approach to the study of the multifaceted aspects of the Latin American and Caribbean countries, including the political and economic involvement of the United States. The pre-Columbian indigenous cultures, the systems of African slavery, economic dependency, 20th-century revolutions in politics, poetry, painting, literature, the churches, and the reassertion of negritude and Indian rights are some of the themes considered in the courses offered in the program.

Requirements

The Latin American and Caribbean Studies minor, an interdisciplinary program, offers students an opportunity to develop a focus on this multifaceted area of the world.

To earn a 15 credit Latin American and Caribbean Studies minor, students (1) complete four three-credit courses and one capstone seminar, and (2) must demonstrate proficiency in one of the following languages: Spanish, French, or Portuguese. The four courses, from a range of fifteen disciplines, must be exclusively or substantially concerned with Latin American and/or the Caribbean. A Capstone Seminar selected from LAC 300, 301, 373 and 399 is required of all minors in their junior or senior year.

Language Proficiency

Student may demonstrate language proficiency when they pass SP 211, FR 211, or PG 211.

Language Electives

Students may count one course of Spanish or French culture and literature listed below to count among their five elective courses. Students may count one Portuguese course with the approval of their advisor.

Study Abroad

Students are strongly advised to apply for a junior semester or year abroad in a country of Latin America or the Caribbean from a wide range of programs. Summer programs are also available. Students are particularly encouraged to study in Nicaragua through our partner UA-Managua, or in Brazil through our Federally funded program at Universidad Estadual do Notre Fluminense. Other approved country programs include: Argentina, Chile, Costa-Rica, Mexico, and Turks and Caicos.

Students are also encouraged to do an internship in a Latin American or Caribbean country (see LAC 373 description in Course Offerings). Funding assistance for internships and research abroad is available through inquiry with the LACS Program directors.

Note: While the majority of courses taken abroad should count towards a LACSP minor, in some cases, based on content, an abroad course may not be awarded credit towards the LACSP minor.

Students may count courses taken for the Latin American and Caribbean studies minor toward their core course or major program requirements.

Course Offerings

Applied Ethics

AE 384 Reflections on the Environment: Focus on Latin America and the Caribbean

Art History

AH 142 Art of Early Modern Spain and Latin America

AH 242 Arts of Spain and its World, 1474 to 1700

Biology

BI 79 Latin American Ecosystems

SP 363 Literature and Culture of the Hispanic Caribbean Migration and Diaspora

SP 371 Images of Latin American Indians

SP 381 Coordinating Seminar: Exit Research Study*

See departmental listings for course descriptions. Note that some of the courses listed above are instructor dependent (noted with *), in that not all sections of a particular course may be suitable for LACS program credit.

Course Descriptions

LAC 300 Justice and the Developing World

This interdisciplinary course combines the insights of history, politics, philosophy, anthropology, sociology, business, and economics to examine problems of poverty and justice in the developing world - including health, education, and environmental sustainability - with particular focus either on Central or South America, or the Caribbean. Significant to the course is a one-week immersion in one country, which is not required but strongly encouraged. Students plan and carry out a research project asking the critical questions and using the research methodologies of their academic major or minor. The immersion trip provides students with an intensive field research opportunity, the findings from which they incorporate into their papers. This course meets the world diversity requirement. Four credits.

LAC 301 Latin America and the United States

This interdisciplinary course is NOT a course in diplomatic relations. Rather it considers the ways in which Latin Americans have perceived, analyzed, depicted, reacted to, and dealt with the United States. The course considers essayists, poets, film makers, social scientists, statesmen, journalists, revolutionaries, artists, vendepatrias, and diplomats. This course, which fulfills the requirement for the capstone seminar in Latin American and Caribbean studies and counts as a history course, includes research papers and oral presentations. Three credits.

LAC 373 Internship in Latin America and the Caribbean

Short-term internships in the field of Latin American and Caribbean Studies combine academic work with service that answers a community-identified need, and critical reflection. Such internships are offered in a Latin American or Caribbean country generally during the summer for a four to six-week period. Prior approval from the director(s) of the LACS program is required. Three credits.

LAC 399 Independent Study

A student may conduct a one-semester independent study on a defined research topic or field of study under the supervision of a Professor in the LACS Program. Requires prior approvals by the Professor with whom the student will work as well as the Director of the LACS program. (Prerequisites: Junior or Senior status, a minimum of one previous course completed from the LACS course listing, and appropriate approvals.) One to three credits.

For the student of the humanities, the social sciences, or business, mathematics at Fairfield University offers training in basic mathematical skills and their application to real world problems. However, more importantly, it attempts to make the student aware of the relationships between mathematics and other branches of knowledge, while imparting a sense of its historical and cultural value.

The Department of Mathematics and Computer Science offers majors and minors in both areas. Information about computer science can be found in the computer science section of this catalog.

The mathematics major offers students a strong and broad background in undergraduate mathematics, providing the foundation for further graduate studies in theoretical or applied fields of mathematics, for advanced study in fields where strong quantitative skills are needed, or for employment in mathematics-related fields in industry or in teaching. The mathematics minor offers students an opportunity to strengthen their mathematical backgrounds.

Requirements

The typical mathematics major curriculum consists of 38 courses and 122 credits (however, if a student takes a one-credit course at some point, then she/he will need only 120 credits). The typical major must take:

- 13 mathematics courses: MA 171, 172, 231, 235, 273, 334, and 371, along with six 300-level mathematics electives;
- CS 151 (or an equivalent course; students who can demonstrate proficiency in a computer programming language can have this requirement waived by the department chair);
- Two semesters of a laboratory science (this also fulfills the natural science core);
- The mathematics capstone requirement.

Although physics is the usual science taken by majors in mathematics and computer science, another laboratory science may be substituted with permission of the chair.

All mathematics majors are expected to complete a two-part capstone requirement consisting of completion of the mathematics comprehensive examination in the spring of their senior year and attendance at a total of five MACS Department Colloquium talks (or equivalent) over their final two years. Those who attend the requisite colloquia and receive a Pass or Pass with Distinction on their mathematics comprehensive exam will have a grade of "Mathematics Capstone Passed" or "Mathematics Capstone Passed with Distinction," respectively, recorded on their transcript; those who do not attend a total of five colloquia during their final two years or fail the mathematics comprehensive exam (or both) will have a grade of "Mathematics Capstone Failed" recorded on their transcript.

Students who wish to double major in mathematics and another area are encouraged to meet with the chairs of the respective departments so that appropriate modifications to the requirements can be made to allow these students to graduate in four years. Popular double majors with mathematics include computer science, economics and physics.

Mathematics majors are required to have a graphing calculator at least as powerful as a TI-84.

Honors Seminar

Students who take the MA 390 or MA 391 Honors Seminar receive three credits for one of their mathematics electives upon completion of one semester of MA 390 or 391. Students who complete two semesters of MA 390-391 earn six credits: the first semester counts as a 3-credit math elective, while the second counts as a 3-credit free elective.

Students Interested in Teaching Mathematics in High School or Middle School

Students planning a career in secondary education should consult with the department chair, and with the Graduate School of Education and Allied Professions, as early as possible.

The curriculum given below represents a typical option for completing the major in mathematics.

Course of Study

Bachelor of Science - Major in Mathematics (120 credits)

Credits

First Year	<i>Fall</i>	<i>Spring</i>
MA 171 Calculus I	4	
MA 172 Calculus II		4
Core courses	12	12
Sophomore Year		
MA 231 Discrete Mathematics	3	
MA 235 Linear Algebra		3
MA 273 Multivariable Calculus	4	
MA Elective		3
Core courses	9	9

Junior Year

MA 334 Abstract Algebra	3	
MA 371 Real Analysis	3	
MA Electives		6
Laboratory Science	4	4
CS 151 Functional Programming	3	
Core courses	3	3
Elective Course		3

Senior Year

Mathematics electives	6	3
Elective courses	9	9
Mathematics Comprehensive Exam		x
Totals	63	59

Bachelor of Science - Double Major in Mathematics and Computer Science

A specific curriculum has been developed in order to allow students to double major in mathematics and computer science. This curriculum is designed to allow the student to complete the double major in four years. If you are interested, please speak with the chair of the department or the director of the computer science program.

Bachelor of Science - Double Major in Mathematics and Physics

A specific curriculum has been developed in order to allow students to double major in mathematics and physics. This curriculum is designed to allow the student to complete the double major in four years. If you are interested, please speak with the chair of either of these two departments.

Minor in Mathematics

For a 15-credit minor in mathematics, students must complete:

- One of MA 119, 145 or 171, and one of MA 120, 146 or 172
- Three mathematics courses at the 200 level or higher

The specific selection of courses must have the approval of the chair of the Department of Mathematics and Computer Science. If a student places out of a first calculus course, then she or he need only take the second calculus course and three 200-level mathematics courses in order to fulfill the minor. Similarly, if the student is placed out of the first and second calculus courses, then he or she need only take three 200-level mathematics courses to fulfill the minor.

Course Descriptions**Mathematics Courses for Non-Majors****MA 10 Mathematics for Liberal Arts**

This course presents major mathematical concepts in an historical and cultural setting. Topics include geometry, set theory and logic, along with others that are the choice of the instructor. Students explore the interplay between mathematics, philosophy, and the arts in addition to the more traditional relationship between mathematics and the physical sciences. The course treats mathematics as an art for its aesthetic beauty and as a science, providing a mathematician's view of the subject rather than preparing students for a specific application of mathematics. Three credits.

MA 11 Precalculus

Topics in this course include: algebra; linear, rational, exponential, logarithmic and trigonometric functions from a descriptive, algebraic, numerical and graphical point of view; limits and continuity. Primary emphasis is on techniques needed for calculus.

This course does not count toward the mathematics core requirement, and is meant to be taken only by students who are required to take MA 119, MA 145 or MA 171 for their majors, but who do not have a strong enough math background. Three credits.

MA 17 Introduction to Probability and Statistics

This introduction to the theory of statistics includes measures of central tendency, variance, Chebyshev's theorem, probability theory, binomial distribution, normal distribution, the central limit theorem, and estimating population means for large samples. Students who have received credit for any mathematics course at the 100-level or higher may not take this course for credit without the permission of the department chair. Three credits.

MA 19 Introduction to Calculus

This course introduces differentiation and integration, and shows how these ideas are related. The course illustrates how important and interesting applied questions, when expressed in the language of mathematical functions, turn out to be questions about derivatives and integrals and, thus, can be solved using calculus. The course presents the basic concepts numerically, algebraically, and geometrically, using graphing calculators to illustrate many of the underlying geometrical ideas. MA 19 is a terminal core course, and is not a prerequisite for any other course. Please note also that MA 19 has no prerequisite and, in particular, that MA 11: *Precalculus* is not an appropriate course to take before taking MA 19. Three credits.

MA 119 Applied Calculus I

Topics in this course include: foundations of the calculus; differentiation of algebraic, exponential and logarithmic functions; extrema and curve sketching; applications of derivatives; antiderivatives; the Fundamental Theorem of Calculus; and integration of algebraic functions. A graphing calculator and Wolfram Alpha are among the technologies that may be used. Students who received credit for MA 19, MA 145 or MA 171 may not take MA 119 for credit. (Prerequisite: Precalculus) Three credits.

MA 120 Applied Calculus II

Topics in this course include: applications of the derivative, including implicit differentiation, related rates and linear approximation; integration of algebraic, transcendental and trigonometric functions; differentiation of trigonometric functions; techniques of integration; applications of the definite integral; infinite series. A graphing calculator and Wolfram Alpha are among the technologies that may be used. Students who receive credit for any one of MA 120, MA 146 or MA 172 may not receive credit for either of the other two. (Prerequisite: MA 119 or equivalent) Three credits.

MA/CS 141 Introduction to Computer Science and Programming

Please see description under CS/MA 141 in the computer science section of the catalog. Students may take this course to satisfy the non-calculus portion of the mathematics core curriculum. (See also below, under Mathematics Courses for Majors) Four credits.

MA 145 Calculus I: Chemistry, Engineering and Physics Majors

This course covers analytic geometry; continuous functions; derivatives of algebraic and trigonometric functions, product and chain rules, implicit functions; extrema and curve sketching; indefinite and definite integrals; applications of derivatives and integrals; exponential, logarithmic and inverse trig functions, hyperbolic trig functions, and their derivatives and integrals. It is recommended that students not enroll in MA 145 unless they have a solid background in high school algebra and precalculus. Four credits.

MA 146 Calculus II: Chemistry, Engineering and Physics Majors

This course covers applications of the integral to area, arc length, and volumes of revolution; integration by substitution and by parts; indeterminate forms and improper integrals; Infinite sequences and infinite series, tests for convergence, power series, and Taylor series; geometry in three-space. (Prerequisite: MA 145 or MA 171 or equivalent) Four credits.

MA/CS 151 Functional Programming

This course provides an introduction to the theory and practice of programming in the functional paradigm. Functional programming is based on a view of programs as data and computing as calculation. This approach facilitates the development of programs that are concise, elegant, and free of broad classes of errors. Topics covered will include a broad introduction to computing, symbolic representation of data, recursion, algebraic data types, the lambda calculus as a model of computing, higher-order functions and type systems. Students will complete the course with both the ability to program and a useful foundation for further study of topics in discrete math, logic, proof, and computer science theory. No prior programming experience is required. May be taken as one course in the core requirement in mathematics. Three credits.

MA 211 Applied Matrix Theory

Students majoring in the sciences, economics, and business learn the basic techniques and applications of linear algebra, including solving linear systems of equations, determinants, linear geometry, eigenvalues, and eigenvectors. Closed to mathematics majors. Students may receive credit for only one of MA 211 and MA 235. Mathematics majors may not take this course as a mathematics requirement or elective. This is a typical course for students earning a minor in mathematics. Three credits.

MA 217 Accelerated Statistics

This introductory, calculus-based statistics course focuses on applications in business, statistics, and everyday events. Topics include descriptive statistics including mean, median, mode, standard deviation, histograms, distributions, box plots, and scatter plots; probability theory including counting rules, random variables, probability distributions, expected values, binomial and normal distributions, and the central limit theorem; inferential statistics including point estimates, confidence intervals, and hypothesis testing; and regression theory. Students learn to analyze data with the aid of common software packages. Mathematics majors may not take this course as a mathematics elective. Students who have received credit for one of MA 217 and 352 may not take the other for credit. This is a typical course for students earning a minor in mathematics. (Prerequisite: MA 119 or MA 145 or MA 171 or equivalent) Three credits.

MA 221 Applied Calculus III

This course covers first order differential equations, vectors in 2-D and 3-D, partial differentiation and multiple integrals. This is the third course in the three-course sequence MA 119-120-221. (Prerequisite: MA 120 or MA 146 or MA 172 or equivalent) Three credits.

MA 245 Calculus III: Engineering and Physics Majors

Topics include partial differentiation; chain rule, exact differentials, maxima and minima; multiple integration; application to volumes, center of gravity; and polar, cylindrical, and spherical coordinates; vector arithmetic and algebra, dot and cross products, parametric equations, lines and planes; gradient, directional derivative, curl, divergence; line integrals, work, Green's theorem, surface integrals; Stokes's and divergence theorems. (Prerequisite: MA 146 or MA 172 or equivalent) Four credits.

MA 321 Ordinary Differential Equations

This course presents the solution of first order differential equations and of higher order linear differential equations; power series solutions; Laplace transforms; and a multitude of applications. Mathematics majors may not take this course as a mathematics elective. Students may receive credit for only one of MA 321 and MA 331. (Prerequisite: MA 221 or MA 246 or MA 273 or equivalent) Three credits.

MA 332 Partial Differential Equations

Topics in this course include first order PDEs and the method of characteristics; separation of variables for linear homogeneous PDEs; eigenvalue problems; Fourier series; solution of the 1-D heat equation, the 1-D wave equation, and the 2-D Laplace equation, both homogeneous and non-homogeneous; and Fourier transforms. (Prerequisites: MA 245 or MA 273 or equivalent, and MA 321 or MA 331 or equivalent) Three credits.

Mathematics Courses for Majors and Other Interested and Qualified Students**MA/CS 141 Introduction to Computer Science and Programming**

Please see description under CS/MA 141 in the computer science section of the catalog. Students may take this course to satisfy the non-calculus portion of the mathematics core curriculum. Four credits.

MA/CS 151 Functional Programming

This course provides an introduction to the theory and practice of programming in the functional paradigm. Functional programming is based on a view of programs as data and computing as calculation. This approach facilitates the development of programs that are concise, elegant, and free of broad classes of errors. Topics covered will include a broad introduction to computing, symbolic representation of data, recursion, algebraic data types, the lambda calculus as a model of computing, higher-order functions and type systems. Students will complete the course with both the ability to program and a useful foundation for further study of topics in discrete math, logic, proof, and computer science theory. No prior programming experience is required. May be taken as one course in the core requirement in mathematics. Three credits.

MA 171 Calculus I

MA 171-172 is our most rigorous first-year calculus sequence. However, students are not expected to have had calculus before taking this course. Topics include functions; limits (including the epsilon-delta definition), continuity, and derivatives; trigonometric functions and their derivatives; applications; relative and absolute extrema, and curve sketching; related rates; Rolle's Theorem and the mean value theorem; antiderivatives, definite integrals and area, and the fundamental theorem of calculus. It is recommended that students not enroll in MA 171 unless they have a solid background in high school algebra and precalculus. Students who have received credit for MA 121 or MA 119 or MA 145 may not take any of the others for credit. Four credits.

MA 172 Calculus II

This course is the continuation of MA 171. Topics include integration by substitution and by parts; areas between curves; volumes of revolution; inverse functions; logarithms and exponential functions; inverse trigonometric functions; indeterminate forms and l'Hospital's rule; improper integrals; and infinite sequences and series, including convergence tests, absolute and conditional convergence, power series and Taylor series. Students who have received credit for MA 120 may not take MA 172 for credit. (Prerequisite: MA 145 or MA 171 or equivalent) Four credits.

MA /CS 231 Discrete Mathematics

Topics in this course include logic; sets; functions; equivalence relations and partitions; mathematical induction; and countability. Three credits.

MA 235 Linear Algebra

Students examine linear spaces and subspaces; linear independence and dependence; bases and dimension; linear operators; matrix theory; determinants and systems of linear equations; eigenvalues and eigenvectors. Students may receive credit for only one of MA 211 and MA 235. (Prerequisite: MA 231 or permission of the department chair) Three credits.

MA 273 Multivariable Calculus

Topics in this course include vectors in the plane and in three-space; equations of lines and planes; vector functions; arc length; functions of several variables, limits, continuity, differentiability and partial derivatives, the gradient, directional derivatives; tangent planes; relative and absolute extrema; multiple integration in cartesian, cylindrical, and spherical coordinates; vector fields; line integrals; Green's theorem. (Prerequisite: MA 172 or MA 146 or equivalent) Four credits.

MA 331 Applied Mathematics

This course covers the theory and solution of ordinary differential equations: first-order equations, linear equations of arbitrary order, and linear systems; power series solutions; Laplace transforms; and existence and uniqueness of solutions. Students may receive credit for only one of MA 321 and MA 331. (Prerequisites: MA 235 and MA 273, or permission of the department chair) Three credits.

MA 332 Partial Differential Equations

Topics in this course include solution of constant and variable coefficient linear equations; separation of variables in two and three variables; eigenvalue problems; Fourier series solution of the heat equation, the wave equation, and the Laplace equation; Fourier transforms; Gamma and Bessel functions; Legendre, Hermite, and Laguerre polynomials. (Prerequisites: MA 245 or MA 273 or equivalent, and MA 321 or MA 331 or equivalent) Three credits.

MA 334 Abstract Algebra

Students study group theory, rings and ideals, integral domains, and fields. (Prerequisites: MA 231 and MA 235 or permission of the department chair) Three credits.

MA 337 Number Theory

This study of the integers includes but is not limited to: primes and their distribution, divisibility and congruences, quadratic reciprocity, special numerical functions such as Euler's one-function, and Diophantine equations. Students consider the influence number theory has had on the development of algebra and the interplay between the two. (Prerequisite: MA 231 or permission of the department chair) Three credits.

MA/CS 342 Theory of Computation

This course explores what computers can and can't do, although it does not require any background in computer science or programming. Topics include finite state machines, push-down automata, Turing machines and recursive functions; mechanisms for formal languages, such as regular grammars, context-free grammars, context-sensitive grammars; and decidable versus undecidable problems. Also listed as CS 342. (Prerequisite: MA 231 or permission of the department chair) Three credits.

MA 351 Probability Theory

Topics in this course include counting techniques; axiomatic probability theory; discrete and continuous sample spaces; random variables, cumulative distribution functions, probability density and mass functions; joint distributions; expected value and moments; common distributions like the normal, binomial, and Poisson distributions; and limit laws. (Prerequisites: MA 231 or CR 245, and MA 245 or MA 273, or permission of the department chair). Three credits.

MA 352 Mathematical Statistics

This course covers transformations of random variables; statistical application of probability; theory of sampling and the Central Limit Theorem; variances of sums and averages; estimation and hypothesis testing; and least squares, curve-fitting, and regression. (Prerequisite: MA 351 or permission of the department chair) Three credits.

MA 361 Topics in Algebra

This course investigates three topics in greater depth than can be done in the first linear or abstract algebra course. Topics may include canonical forms for matrices, metric linear algebra, ideal theory, finite non-abelian groups, and Galois theory. The course typically includes one linear and one abstract algebra topic. (Prerequisite: MA 334 or permission of the department chair) Three credits.

MA 371 Real Analysis

This course examines the set of real numbers as a complete, ordered, archimedean field; \mathbb{R} as a linear vector space equipped with inner product and norm; metrics, particularly Euclidean, on \mathbb{R} , topological concepts: continuity, connectedness, and compactness; the intermediate value, extreme value, monotone convergence, Bolzano/Weierstrass and Heine/Borel theorems; convergence and uniform convergence of sequences of continuous functions; differentiation. (Prerequisites: MA 231 and MA 273 or permission of the department chair) Three credits.

MA 373 Complex Analysis

Topics in this course include algebra of complex numbers, Cauchy-Riemann equations and analytic functions, complex differentiation, integration in the complex plane, Cauchy's Theorem and integral formula, conformal mapping, Laurent series and residue theory, and applications. (Prerequisite: MA 231 and MA 273 or permission of the department chair) Three credits.

MA/CS 377 Numerical Analysis

This course investigates computer arithmetic, round-off errors, the solution of nonlinear equations, polynomial approximation, numerical differentiation and integration, and the solution of systems of linear equations via student-written code to implement the algorithms and/or the use of available software. Also listed as CS 377. (Prerequisites: MA 172, MA 235 and proficiency in a computer language, or permission of the department chair) Three credits.

MA 383 Modern Geometry

Topics in this course include: foundation for plane geometries; theorems of Menelaus, Ceva, Desargues, Pascal, Brianchon, and Feuerbach; inversion and reciprocation transformations; projective, Riemannian and Lobachevskian geometries; and Poincaré model. (Prerequisites: MA 231 and MA 235 or permission of the department chair) Three credits.

MA 385 Point Set Topology

This course considers topological spaces, continuous functions; product, metric, and quotient spaces; countability and separation axioms; existence and extension of continuous functions; compactification; metrization theorems and complete metric spaces. (Prerequisite: MA 371 or permission of the department chair) Three credits.

MA 390/391 Honors Seminar

Participation is open to senior mathematics majors with a mathematics GPA of 3.50 or higher and invited junior and senior mathematics majors with demonstrated ability who have been recommended by the mathematics faculty. This seminar provides talented students with an opportunity to undertake individualized study under faculty direction. Participants present several lectures before a group of peers. The seminar's subject matter varies each semester. Three credits.

MA 397/398 Internship in Mathematics

The internship program provides senior mathematics majors with opportunities to gain practical, career-related experience in a variety of supervised field settings. Student interns select from a variety of placements, especially those requiring applications of mathematics, numerical methods, and statistics. Interns spend a minimum of 10 hours per week working at the placement site and complete the required academic component specified by their faculty advisor. Internship credits vary; interns may register for a summer session and/or one or two semesters for an overall maximum of six credits. In addition, an internship must satisfy the requirements outlined in the University Internship Policy, which is available from the Career Planning Center. An internship may not take the place of a mathematics elective. (Prerequisites: senior standing, completed application form, acceptance by the field placement supervisor, and approval by the Department of Mathematics and Computer Science.) One to three credits per semester/session.

MA 399 Independent Study in Mathematics

Independent study provides students with the opportunity to examine areas not covered in the undergraduate curriculum. Under the guidance of a faculty member, advanced students learn about an area in mathematics through reading and research. Independent study includes written work in the form of exercises or papers. Students apply to a professor under whose direction they wish to study and obtain the approval of the department chair. This course may not replace a mathematics elective to fulfill the requirements for the major, unless special permission is given by the department chair. Three credits.

The study of modern foreign languages, as well as cultures and literatures in their original languages, is an intellectual experience that offers students another point of view on life. Knowledge of a language other than English frees students from the restraints of seeing but one reality, and the new perspectives gained from understanding the expression of another people are the essence of a liberal education.

The Department of Modern Languages and Literatures stresses proficiency in all language skills to prepare students for careers in business, communication, education, government, health sciences, social work, and related professions.

The department offers instruction in the following languages: Arabic, Chinese, French, German, Hebrew, Italian, Japanese, Portuguese, Russian, and Spanish. Currently, majors and minors are available in French, German, Italian, and Spanish.

In addition to its own programs, the Department of Modern Languages and Literatures participates in the International Studies program and the minor programs in Asian Studies, Italian Studies, Judaic Studies, Latin American and Caribbean Studies, Russian and East European Studies, and Women, Gender, and Sexuality Studies.

Select language courses may count toward those programs. A limited number of courses taught in English may count towards majors and minors. Courses offered by other departments may count as well. Please consult individual directors of French, German, Italian and Spanish sections for a list of relevant courses from outside the department.

Note: Education minors need a minimum of 30 credits in the language area, of which at least three credits must be in literature and three in culture/civilization.

Language Core Requirements

Core requirements may be fulfilled by successfully completing two semesters at the intermediate level of any language listed among the offerings of the Department of Modern Languages and Literatures.

Core Mission Statement

The study of languages is a key element in working and learning across cultures and geographical boundaries. Language in the Core Curriculum focuses on the acquisition of the skills of reading, listening, speaking, and writing, though the emphasis varies according to the chosen language. Students in core language study acquire knowledge about other cultures, literatures, and historical periods. It is expected that students will use the skills and knowledge acquired in language courses in practical and intellectual pursuits.

Through their study of foreign languages, students will:

- be able to read a passage of moderate difficulty in their chosen language and be able to communicate with a native speaker;
- learn grammatical and syntactical rules which will facilitate oral and written expression in the language;
- become acquainted with the life, customs, and cultural traditions where the language is spoken.

Requirements

French Major

French majors elect a minimum of 30 upper-division credits in French for a total of 10 courses, at least 7 courses of which are in the target language (this may include 211 with a B or better); up to 2 courses may be taken in English, either from the department's offerings or from a list of approved courses in other departments; and one capstone seminar taught in English. Students select their course of study from a variety of offerings including courses on composition and conversation, creative writing, France's culture, francophone culture, literature, film. French majors also have the opportunity to apply for internships that count towards the major. Students are encouraged to study abroad in France or in a francophone country either during the junior year or in the summer. The final course for the French major must be taken at Fairfield University.

All majors are urged to work closely, as soon as possible, with an advisor of their choice to plan a program.

French Minor

Students seeking a minor in French complete 15 credits in the language beyond the intermediate 210 level for a total of 5 courses, at least 3 of which are in the target language (this may include 211 with a B or better); up to 2 courses may be taken in English, either from the department's offerings or from a list of approved courses in other departments). Students select their courses in consultation with a departmental advisor.

Special credit notes:

FR 211 with a grade of B or better counts towards the minor/major.

List of courses in English approved to count toward the French Major and Minor starting with the Class of 2016:

AH 120 Medieval Art of Western Europe
 AH 150 Neoclassical and Romantic Art
 AH 152 Modern Art
 EN 103 Fairy Tales
 HI 230 Early Modern France
 HI 316 The French Revolution and Napoleon
 HI 317 Religious Outsiders in Early Modern France and Europe
 PH 207 Augustine, Pascal, and Camus
 PH 209 Existentialism
 PH 307 Descartes
 PH 316 Bergson

German Major

German majors elect a minimum of 30 upper-division credits in German for a total of 10 courses, at least 7 courses of which are in the target language (this may include 211 with a B or better). Up to 2 courses may be taken in English, either from the department's offerings or from a list of approved courses in other departments; and one capstone seminar taught in English. Students also have the opportunity to apply for internships that count towards the major. German majors also are encouraged to study abroad in Germany with Fairfield's Baden-Württemberg exchange program either during the junior year or in the summer. The final course for the German major must be taken at Fairfield University.

German Minor

Students seeking a minor in German complete 15 credits in the language beyond the intermediate (210) level for a total of 5 courses, at least 3 courses of which are in the target language (which may include 211 with a B or better); up to 2 courses may be taken in English, either from the department's offerings or from a list of approved courses in other departments. Students select their courses with a departmental advisor.

Special credit notes:

GM 211 with a grade of B or better counts towards the minor and major.

Italian Major

Italian majors elect a minimum of 30 upper-division credits in Italian for a total of 10 courses, at least 7 courses of which are in the target language (this may include 211 with a B or better). Up to 2 courses may be taken in English, either from the department's offerings or from a list of approved courses in other departments; and one capstone seminar taught in English. Students select their course of study from a variety of offerings including courses on composition and conversation, creative writing, contemporary culture and film, the short story, literature of the New World, and Dante (which is offered in translation; majors are encouraged to do their written work in Italian). Italian majors also have the opportunity to apply for internships that count towards the major. Students are encouraged to study abroad at our affiliates in Florence either during the junior year or in the summer. The final course for the Italian major must be taken at Fairfield University.

All majors are urged to work closely, as soon as possible, with an advisor of their choice to plan a program.

Italian Minor

Students seeking a minor in Italian complete 15 credits in the language beyond the intermediate 210 level for a total of 5 courses at least 3 courses of which are in the target language (including 211 with a B or better); up to 2 courses may be taken in English, either from the department's offerings or from a list of approved courses in other departments. Students select their courses in consultation with a departmental advisor.

Special credit notes:

IT 211 with a grade of B or better counts towards the minor in Italian.

Spanish Major

A total of 30 credits (10 course) at the 200-300 level (beyond the 211 level) are required for the Spanish major. There are six required courses and four electives. One course may be taken in English.

Required courses: The six required courses for the major (all taken at Fairfield University) are:

1. SP 220: Topics in Language and Culture (3 credits)
2. SP 245: Analysis and Interpretation of Hispanic Literature (3 credits)
3. One course from each of the following areas (total of 3 courses, 9 credits):
 - a. Peninsular (Spanish) literature and culture:
 - Sp 251 Spanish Civilization and Culture
 - SP 301 Love, Life, and Death in Spanish Literature
 - SP 346 Memory, Amnesia and Engagement in Contemporary Spanish Theater
 - SP 311 Glory, Splendor, and Decay: Spanish Golden Age Literature
 - SP 357 The Spanish Novel
 - SP 331 Love and Deception in 19th Century Spanish Literature
 - SP 341 20th Century Spanish Literature
 - b. Latin American literature and culture:
 - SP 253 Spanish American Civilization
 - SP 271 Hispanic Film
 - SP 303 From Empire to Modernization in Spanish American Literature
 - SP 305 Popular Culture in Latin America
 - SP 353 Spanish-American Narrative
 - SP 359 Culture, Civilization, and Literature in the Spanish-American Caribbean Region
 - SP 360 Dictatorships and Revolutionary Movements in Contemporary Latin America
 - SP 363 Literature and Culture of the Hispanic Caribbean Migration and Diaspora
 - SP 371 Images of Latin American Indians
 - c. Structure of the Spanish Language:
 - SP 208 Intermediate Spanish for Health Professionals
 - SP 225 Spanish and English in Contrast
 - SP 231 Career-Oriented Spanish
 - SP 285 Introduction to Spanish Linguistics
4. SP 381 Exit Research Study / Senior Capstone. (Students must take this course during their senior year.) (3 credits)

Notes:

- SP 220 is a prerequisite for all subsequent Spanish classes. After taking SP 220, students may take all remaining courses (required and elective) at any time and in any order, provided individual course prerequisites are met.
 - Students who recieved their High School education in a Spanish-speaking country, in Spanish, are not allowed to take SP 220. They must still take 30 credits for the major or 15 credits for the minor.
 - Study Abroad: Students are encouraged to study abroad in a Spanish speaking country. In order to have courses taken abroad count toward the Spanish major or minor two conditions must be met: 1) the courses are taught entirely in Spanish; and 2) the content is related to some aspect of Latin American or Spanish culture, history, politics, or literature.
 - Any questions regarding the major should be directed to the director of the Spanish section.
-

Spanish Minor

Students who wish to minor in Spanish must complete 15 credits (5 courses) at the 200-300 level (beyond the 211 level). There is one required course and four electives.

Required course:

SP 220 Topics in Language and Culture

Note: We strongly recommend that all minors also take SP 245 Analysis and Interpretation of Hispanic Literature.

Elective courses:

The remaining four (4) courses can include any 200-300 level course (beyond the 211 level) taught at Fairfield University, courses taken abroad, or the coordination seminar (with professor approval.)

Notes:

- SP 200 is a prerequisite for all subsequent Spanish classes. After taking SP 220, students may take all remaining course (required and elective) at any time and in any order, provided individual course prerequisites are met.
- Students who received their High School education in a Spanish-speaking country, in Spanish, are not allowed to take SP 220. They must still take 30 credits for the major or 15 credits for the minor.
- Study Abroad: Students are encouraged to study abroad in a Spanish speaking country. In order to have courses taken abroad count toward the Spanish major or minor two conditions must be met: 1) the courses are taught entirely in Spanish: and 2) the content is related to some aspect of Latin American or Spanish culture, history, politics, literature or linguistics.
- Any questions regarding the minor should be directed to the director of the Spanish section.

Course Descriptions

Arabic

AR 110-111 Elementary Modern Standard Arabic

This two-semester sequence teaches the essentials of phonology, script, structure, and usage, allowing students to acquire the skills of listening, speaking, reading, and writing in the standard means of communicating in the Arab world. Teaching is proficiency-based, implying that all activities within the courses are aimed at placing student learners in the context of the native-speaking environment. Three credits per semester.

AR 210-211 Intermediate Modern Standard Arabic

Designed for students who have completed AR 110-111 or whose placement scores are in the range of this course level. This two-semester sequence continues to build upon the skills acquired in the first-year course. Emphasis will be placed upon improving grammar, listening comprehension, and speaking and reading skills. Students will gain confidence in conversing with native speakers on a variety of topics, will be able to write more complex texts on everyday themes, and will acquire the skills to read uncomplicated authentic texts, such as newspaper articles on familiar topics. (Prerequisite: AR 111 or permission of instructor.) Three credits per semester.

AR 215 Intermediate Intensive Modern Standard Arabic

This intensive second-year course is designed to build upon skills of listening, speaking, reading and writing developed in earlier elementary courses. Students will acquire a broader range of vocabulary and be introduced to more complex grammatical structures. Students will learn to recognize and understand a wider range of cultural and linguistic components. Students will also increase their proficiency in Arabic script and sound system, and practice more conversation and dictation. Weekly Oral Practice Sessions (OPS) are mandatory (Prerequisite: AR 111 or permission of instructor.) Six credits.

AR 220 Advanced Modern Standard Arabic I

This course will continue to build on work completed through the intermediate level. Emphasis will be placed upon mastering more advanced grammar, and speaking, listening and reading skills at an Advanced-Low level. Students will gain more confidence in conversing with native speakers on a variety of topics. The course will lead students towards a fairly comprehensive understanding of Arabic language features through the study of a variety of documents (written, audio and video). The selection of documents will also serve as a basis for discussion on some social issues regarding the contemporary Arabic-speaking world, as well as the history and cultural backgrounds. Students are required to attend one weekly one-hour Oral Practice Session (OPS) (Prerequisite: AR 211, or AR 215, or permission of instructor) Three credits.

AR 381-382 Coordinating Seminar/Independent Study

Students undertake readings and studies in a specialized area of Arabic language and culture, under the direction of a staff member. Designed to fill the special needs of specific students, this course is offered at the discretion of the department chair. Hours by arrangement. Three credits per semester.

Chinese**CI 110-111 Elementary Chinese**

Designed for students with no prior experience with Chinese or whose placement scores are in the range for this course level. This two-semester sequence teaches the essentials of pronunciation, structure, and usage, allowing students to acquire the skills of listening, speaking, reading, and writing. Language cultures are explored through a variety of media. Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

CI 210-211 Intermediate Chinese

Designed for students who have completed CI 110-CI 111 or whose placement scores are in the range for this course level. This two-semester sequence prepares students to continue the study of language on a more advanced level, and includes review of essential points of grammar, vocabulary building, and regular practice in speaking and writing. The language cultures are explored through a wide variety of materials (literary texts, press articles, films, etc.). Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

CI 220 Advanced Chinese

This course will continue to build on work completed through the intermediate level Chinese. All four skills, reading, listening, reading and writing, will be further strengthened, but with emphasis on consolidating conversational skills and improving reading confidence. Upon completion of the course, students should be able to use integrated skills and cultural strategies to speak with some fluency on everyday conversational topics, read lengthier and more complex materials, write short but accurate compositions on computers using Chinese software, and develop a more sophisticated sense about the language and the culture. Prerequisites: CI 211 or permission of instructor. Three credits.

CI 250 /EN 118 Modern China through Fiction and Film

A study of various cultural aspects of modern China in the 20th century through reading translated fiction as well as films. Students explore topics such as modernity, nationalism, individualism, gender, and cultural identity in the modern cultural-historical context. Also will be discussed are issues particular to fiction and film as representational modes: How do fiction and film narrate history and the complex Chinese experience? How have they both been shaped by and contributed to the socio-cultural transformations? And how do they represent the increasingly diversified cultural and social landscape of contemporary China? Cross-listed with EN 118. This course meets the world diversity requirement. Three credits.

CI 251 New Chinese Cinema

The course examines the films of major directors contributing to the rise of "New Chinese Cinema" in mainland China, Taiwan and Hong Kong since the mid-1980s. Emphasis is on individual directors' distinctive aesthetics and philosophy in the specific cultural-historical context of film production and reception. Students will study how these films represent history and memory, the relationship between individual and society, woman and gender, and how such films participate in the cultural imagination of China and Chineseness in the global context. The goal will be development of a basic film-critical vocabulary. All films have subtitles, and readings are in English. This course meets the world diversity requirement. Three credits.

CI 252 /EN 119 The City and Modern China

The course studies the literary and visual representations of the city in modern China through a sampling of stories, novels, photos, films, and critical essays. Students discuss how literature and visual art bear witnesses to the changing faces of the metropolis and urban life during the time of Chinese modernization and globalization and how the city expresses modern ethos, desires and paradoxes in literary works and films. All texts are in English. Films have subtitles. Cross-listed with EN 119. This course meets the world diversity requirement. Three credits.

CI 381-382 Coordinating Seminar/Independent Study

Students undertake readings and studies in a specialized area of Chinese under the direction of a staff member. Designed to fill the special needs of specific students, this course is offered at the discretion of the department chair. Hours by arrangement. Three credits per semester.

French**FR 110-111 Elementary French**

Designed for students with no prior experience with French or whose placement scores are in the range for this course level. This two-semester sequence teaches the essentials of pronunciation, structure, and usage, allowing students to acquire the skills of listening, speaking, reading, and writing. Language cultures are explored through a variety of media. Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

FR 210-211 Intermediate French

Designed for students who have completed FR 110-FR 111 or whose placement scores are in the range for this course level. This two-semester sequence prepares students to continue the study of language on a more advanced level, and includes review of essential points of grammar, vocabulary building, and regular practice in speaking and writing. The language cultures are explored through a wide variety of materials (literary texts, press articles, films, etc.) Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

FR 220 Topics in Language & Culture

This course improves proficiency in written and oral expression by focusing on topics in French language and culture. Students develop advanced writing and speaking skills while concentrating on grammar, style, and appropriateness. Weekly compositions, based primarily on the genres studied (short story, theater, memoir, essay) allow students to identify and correct grammatical mistakes. Students present speeches in class and conduct situational dramas such as job interviews, television reporting, courtroom trials, debates in French. Films and various cultural artifacts (comic strips, proverbs, songs) familiarize students with idiomatic French. (Prerequisite: FR 211 or equivalent or by permission of the instructor) Three credits.

FR 251-252 Culture and Civilization of France and the Francophone World

This two-semester sequence explores France and French-speaking people in a cultural, social, and historical context. In the second semester the exploration moves into regions that comprise the francophone world. Students use multimedia, Internet, and audio-visual resources extensively and submit frequent oral and written reports. FR 252 course meets the world diversity requirement. Three credits per semester.

FR 260/EN 117 Introduction to Francophone Sub-Saharan African Culture

This course taught in English explores the issues that confront Sub-Saharan Africa in its transformation from tradition to colonization, and finally to independence through a large variety of literary texts (traditional oral literature and modern written literature), critical theory, films, music, and magazine and newspaper articles. Texts and films will be discussed from a multi-disciplinary perspective to illustrate their cultural, sociological, political, and religious import. Africa's geography and major historical markers will be woven into the readings and discussions. Students taking this course for French credits will do a significant part of the readings and assigned writing in French. This course meets the world diversity requirement. Three credits.

FR 265 French Translation Workshop

In this course, students develop expertise in the art and craft of translation. The course presents terminology, advanced grammar analysis, and procedures that assist the translator in describing and solving translation problems. It uses real and simulated case studies in a variety of fields including commercial correspondence, tourism, food, transportation, telecommunications, social science, and literature. Students practice with native script, giving attention to individual interests and majors, using French-to-English and English-to-French translations. The class, which is conducted in both languages, uses human, computer-based, and print resources. (Prerequisite: FR 220, FR 221, or permission of instructor) Three credits.

FR 267 French Commercial Culture

This introduction to the business practices and economic situation of France in the context of the European Union emphasizes commercial vocabulary and business situations presented through extensive use of authentic material and documents. This course, which is of particular interest to students seeking a career in international business or international affairs, uses multimedia, Internet, and audio-visual resources extensively, and includes regular practice in speaking and writing. Three credits.

FR 271 Contemporary French Press and Media

Students read and discuss articles from representative magazines and newspapers in French, as well as reports from television news broadcasts and the Internet. The course considers how the media and technology are shaping French society in the 21st century and discusses a wide range of topics such as politics, education, religion, the arts, science, privacy, and censorship. Students complete frequent oral and written reports. Three credits.

FR 295/ EN 114 Caribbean Literature: History, Culture, and Identity

This course serves as an introduction to the field of Caribbean literatures in English and English translation, with a focus on the French-speaking Caribbean. We survey a wide range of theoretical and fictional texts (poetry, short stories, novels, theatre), and introduce students to the debate surrounding the formation of Antillean cultural identity/identities. This course examines "Caribbean literatures" with respect to their language of origin, colonization, slavery, racial experience, landscape, migration, and diaspora, specifically in Haiti, Martinique, Guadeloupe, Barbados, Trinidad, Cuba, and the Netherlands Antilles/Surinam. No prerequisite for French majors. Cross-listed with EN 295. This course meets the world diversity requirement. (Prerequisite for English: EN 12 or its equivalent) Three credits.

FR 301-302 Survey of Literature in French

The two-semester sequence presents a chronological view of French literature, emphasizing the most important writers and major literary movements and themes. The first semester considers varied genres from the Middle Ages through the 17th century. The second semester studies the forces unleashed by the Revolution and considers the development of modern French literature. Three credits per semester.

FR 305 French and Francophone Women Writers

The course explores a wide range of literary genres produced by women writers from France and the francophone world, investigating women's issues such as race, gender, class, status, and power within the historical, political, and cultural contexts of their regions of origin. The course introduces French feminist theories. Students read and conduct discussions in French and complete frequent oral and written assignments. Three credits.

FR 321 18th-Century Literature

Students undertake readings and discussions of works by Voltaire, Marivaux, Diderot, Rousseau, Beaumarchais, and others. The course emphasizes class discussion and student participation, and requires frequent papers. Three credits.

FR 337 Literature of the 19th Century: Romanticism to Naturalism

From Romanticism to Naturalism, this course selects from a variety of genres - fantastic and exotic tales, science fiction, short stories, poetry and novels - to provide an overview of the rich literature of nineteenth-century France. Love, war, and the imagination contend for attention while the country emerges from political and social revolution, headed toward democracy and the Industrial Revolution. This course requires frequent oral reports and critical papers. Three credits.

FR 346 Modern French Theatre

This course introduces students to the history of French theatre and its various genres, and to the theory and practice in contemporary France. Participants study full-length works by major modern dramatists from France and the francophone world, viewing these works on videos or in local theaters. The course requires frequent oral reports and critical papers. Three credits.

FR 347 Modern French Novel

Students in this course read and discuss important modern novelists such as Mauriac, Malraux, Sartre, Beauvoir, Camus, Duras, Le Clezio, and others. The course requires frequent oral reports and critical papers. Three credits.

FR 366-367 Film and Literature in French

This two-semester sequence examines the relationship between film and literature. Students view the film version of each work, which serves as a basis for class discussion. The course requires frequent oral and written works. Three credits per semester.

FR 377-378 Internship

The internship program gives students first-hand experience in the fields of translation, interpretation, cataloging, public relations, advertising, teaching, etc., in the language of their specialization. Department members, who agree to guide the endeavor, supervise student work. When required by a faculty supervisor, an evaluation of student interns may be required from the institution where students work. The student's work should demand no less than one full day per week, or its equivalent. Three credits per semester.

FR 381-382 Coordinating Seminar

Students undertake readings and studies in a specialized area of French, under the direction of a staff member. Designed to fill the special needs of specific students, this course is offered at the discretion of the department chair. Hours by arrangement. Three credits per semester.

FR 399 Capstone Seminar

Majors in French participate in an interdisciplinary seminar in the spring of their senior year. The focus of this seminar varies according to the professor, but possible topics include European Film, The Grand Tour, Immigration in Europe, Capital Cities, Language Teaching and Technology, Europe and America. Students research their capstone papers in target language and present final work in English. The instructor may, in some cases, evaluate work in the target language in consultation with colleagues in that area of expertise in the department. Seminar is conducted in English. (Prerequisite: senior standing or by permission of the instructor) Three credit.

German**GM 110-111 Elementary German**

Designed for students with no prior experience with German or whose placement scores are in the range for this course level. This two-semester sequence teaches the essentials of pronunciation, structure, and usage, allowing students to acquire the skills of listening, speaking, reading, and writing. Language cultures are explored through a variety of media. Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

GM 210-211 Intermediate German

Designed for students who have completed GM 110-GM 111 or whose placement scores are in the range for this course level. This two-semester sequence prepares students to continue the study of language on a more advanced level, and includes review of essential points of grammar, vocabulary building, and regular practice in speaking and writing. The language cultures are explored through a wide variety of materials (literary texts, press articles, films, etc.). Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

GM 220 Topics in Language & Culture

This course improves proficiency in written and oral expression by focusing on particular topics in German language and culture. Students develop advanced writing and speaking skills while concentrating on grammar, style, and appropriateness. Weekly compositions, based primarily on the genres studies (short story, theater, memoir, essay) allow students to identify and correct grammatical mistakes. Students present speeches in class and conduct situational dramas such as job interviews, television reporting, courtroom trials, debates in German. Films and various cultural artifacts (comic strips, proverbs, songs) familiarize students with idiomatic German. (Prerequisite: GM 211 or equivalent or by permission of the instructor) Three credits.

GM 251-252 German Culture and Civilization

In the first semester, this course examines the main currents of German culture and civilization through lectures, films, the Internet, and literary and cultural readings. Students complete frequent oral and written reports. During the second semester, the course examines German immigration, especially to the United States, considering in-depth the German-American experience through lectures, films, the Internet, and literary and cultural readings. The first semester is conducted in German; the second semester is conducted in English. Both semesters require frequent oral and written reports. Three credits per semester.

GM 261-262 Survey of German Literature

This two-semester sequence offers an overview of German works and literary movements from the Middle Ages to 1945, providing students with the fundamentals of literary analysis in the genres of poetry, drama, novellas, novels, short stories, and film. The course requires frequent oral and written reports. Three credits per semester.

GM 271 18th-Century German Literature

This course covers the development of German literature from the Sturm und Drang movement through the classic period of Goethe and Schiller, including Henrich von Kleist and an analysis of the Romantic literary theory (Eichendorff, Novalis, Hoffmann). Three credits.

GM 281 19th-Century German Literature

This course focuses on fairy tales. We explore the tales by the Brothers Grimm, but also meet such suspenseful writers as E.T.A. Hoffmann, Hauff, and others. Numerous stories have been written and filmed that enable us to connect 19th-century tales with life today. We immerse ourselves in these stories by listening, telling, reading, writing about, and watching them. Three credits.

GM 291 Modern German Literature

This course introduces students to a variety of German literature and genres (novel, short story, and poem) written in the 20th century. All works are heavily influenced by the two world wars. The literary canon includes a text by Kafka, portraying hope and despair, and Anna Seghers' novel written in exile, poems and short stories portraying the various social and political changes in West Germany, and the essays by the East German writer Christa Wolf that deals with loyalty and dissidence. The course also addresses narrative strategies and the challenges faced by the translator. Furthermore, we talk about the different roles literature can play, including the influence and value in furthering the understanding of material to contextualize the readings. Particular interest is the portrayal of social and political issues. This course is also offered as EN 282. Three credits.

GM 377-378 Internship

The internship program gives students first-hand experience in the fields of translation, interpretation, cataloging, public relations, advertising, teaching, etc., in the language of their specialization. Department members, who agree to guide the endeavor, supervise student work. When required by a faculty supervisor, an evaluation of student interns may be required from the institution where students work. The student's work should demand no less than one full day per week, or its equivalent. Three credits per semester.

GM 381-382 Coordinating Seminar

Students undertake readings and studies in a specialized area of German under the direction of a staff member. Designed to fill the special needs of specific students, this course is offered at the discretion of the department chair. Hours by arrangement. Three credits per semester.

GM 399 Capstone Seminar

Majors in German participate in an interdisciplinary seminar in the spring of their senior year. The focus of this seminar varies according to the professor, but possible topics include European Film, The Grand Tour, Immigration in Europe, Capital Cities, Language Teaching and Technology, Europe and America. Students research their capstone papers in target language and present final work in English. The instructor may, in some cases, evaluate work in the target language in consultation with colleagues in the area of expertise in the department. Seminar is conducted in English. (Prerequisite: senior standing or by permission of the instructor) Three credits.

Hebrew

HE 110-111 Elementary Hebrew

Designed for students with no prior experience with Hebrew or whose placement scores are in the range for this course level. This two-semester sequence teaches the essentials of pronunciation, structure, and usage, allowing students to acquire the skills of listening, speaking, reading, and writing. Language cultures are explored through a variety of media. Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

HE 210-211 Intermediate Hebrew

Designed for students who have completed HE 110- HE 111 or whose placement scores are in the range for this course level. This two-semester sequence prepares students to continue the study of language on a more advanced level, and includes review of essential points of grammar, vocabulary building, and regular practice in speaking and writing. The language cultures are explored through a wide variety of materials (literary texts, press articles, films, etc.). Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

Italian**IT 110-111 Elementary Italian**

Designed for students with no prior experience with Italian or whose placement scores are in the range for this course level. This two-semester sequence teaches the essentials of pronunciation, structure, and usage, allowing students to acquire the skills of listening, speaking, reading, and writing. Language cultures are explored through a variety of media. Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

IT 210-211 Intermediate Italian

Designed for students who have completed IT 110-IT 111 or whose placement scores are in the range for this course level. This two-semester sequence prepares students to continue the study of language on a more advanced level, and includes review of essential points of grammar, vocabulary building, and regular practice in speaking and writing. The language cultures are explored through a wide variety of materials (literary texts, press articles, films, etc.) Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

IT 220 Topics in Language & Culture

This course improves proficiency in written and oral expression by focusing on particular topics in Italian language and culture. Students develop advanced writing and speaking skills while concentrating on grammar, style, and appropriateness. Weekly compositions, based primarily on the genres studied (short story, theater, memoirs, essay) allow students to identify and correct grammatical mistakes. Students present speeches in class and conduct situational dramas such as job interviews, television reporting, courtroom trials, debates in Italian. Films and various cultural artifacts (comic strips, proverbs, songs) familiarize students with idiomatic Italian. (Prerequisite: IT 211 or equivalent or by permission of the instructor) Three credits.

IT 233 Creative Writing

This course will explore the craft of fiction, touching on both its theory and practice. Students will begin by examining some masters of prose in order to discuss key elements of fiction writing (plot, character, point of view, and style). They will consider the panorama of modern and contemporary Italian fiction, from the novella to the historical novel, coming-of-age fiction to the postmodern immigrant narrative. Students will develop individual creative projects, which will be shared with their workshop classmates and revised in cooperation with the instructor. (Prerequisite: IT 211 or equivalent) Three credits.

IT 253 Contemporary Italian Culture

This course examines aspects of contemporary Italian culture in the arts, film, music, media, and literature. Students analyze the debates that inform the political, social, and cultural dimensions of Italian society today. Readings include magazine and newspaper articles, print advertisements, novels, short stories, and comic books. Students view television news reports, soap operas, commercials, and movies, and listen to various types of contemporary Italian music. The course is conducted in Italian. (Prerequisite: IT 211 or equivalent) Three credits.

IT 255 The Novella

This course (formally IT 255) analyzes the most successful genre in Italian literature, the novella (short story), as it evolved from the medieval era through the Renaissance to present day. Students read selections from Boccaccio, Basile, Bandello, Verga, Pirandello, Deledda, Morante, Moravia, Calvino, and others. The course is conducted in Italian. Three credits.

IT 262/EN 116 Rome in the Cultural Imagination

The city of Rome has been a source of wonder and amazement throughout recorded history. This course examines the foundation myths of the Eternal City in contrast with the historical accounts, discusses early accounts of the life of the city, evaluates the reasons for its decline and fall, considers the riches of Renaissance and Baroque periods, reads poetry by the Roman people, and examines Rome's centrality for the world of art. This course also focuses on the political importance of the city from its inception through the Risorgimento (Italian Unification), to Fascism and World War II, to present day. Three credits.

IT 271/FM 103 Italian Cinema

This survey of Italian films as textual, cultural, and historical artifacts analyzes movements such as neorealism, *commedia all'italiana*, the spaghetti western, and new Italian cinema through the works of selected directors. The course follows a chronology from the silent period to present day, with special emphasis on the "golden ages" of Italian cinema, neo-realism of the postwar period, the 1960s' comedy of manners, and the new Italian cinema of the '80s and '90s. Students analyze the works of Rossellini, De Sica, Fellini, Visconti, Germi, Antonioni, Wertmüller, Leone, Pasolini, Moretti, Benigni, and others. The course, which is conducted in English, counts toward the core requirement in Visual & Performing Arts. Three credits.

IT 289/EN 115 Dante

This course examines the works of Dante Alighieri, including the *Vita nuova*, in addition to the "Inferno," "Purgatorio," and "Paradiso" from the *Divine Comedy*. Students are introduced to the political, linguistic, theological, and poetic ideas that make Dante's works not only significant in the medieval context, but also continue to challenge and inform modern debates. This course, which is conducted in English, counts towards the core requirement in literature. Three credits.

IT 330 Redefining the Cosmos: Voyages to the New World in the Italian Renaissance

The Italian Renaissance has traditionally been understood as the very laboratory of Modernity. In a time where new and revolutionary ideas about art, politics and science took shape, Europe faced an extraordinary challenge: how to integrate into "the Renaissance experiment" the new natural and human experience that opened up with the discovery of the New World. Italy produced an extraordinarily heterogeneous body of work that stemmed from these voyages: that is, a "literature of discovery". This course will explore this literature, which includes epic poems, popular cantari, travelogues, historical and geographical treatises, as well as epistolary collections. (Prerequisite: IT 223 or permission of instructor) Three credits.

IT 377-378 Internship

The internship program gives students first-hand experience in the fields of translation, interpretation, cataloging, public relations, advertising, teaching in the language of their specialization. Department members, who agree to guide the endeavor, supervise student work. When required by a faculty supervisor, an evaluation of student interns may be required from the institution where students work. The student's work should demand no less than one full day per week, or its equivalent. Three credits per semester

IT 381-382 Coordinating Seminar/ Independent Study

Students undertake readings and studies in a specialized area of Italian, under the direction of a staff member. Designed to fill the special needs of specific students, this course is offered at the discretion of the department chair. Hours by arrangement. Three credits per semester.

IT 393 The Italian-American Experience

This course analyzes the concept of nationality and national identity in literature, film, and critical essays by and about Italian-Americans. The course also discusses the concept of ethnicity together with the phenomenon of emigration and the difference in roles for men and women in this subgroup of American society. The success of Italian-Americans in various sectors of society reveals the vitality and determination of this particular ethnic group in the face of prejudice and economic hardship. Students examine the contributions of Italians who left their native land for a new beginning and discuss the perception and reality of America as the "promised land" in the Italian-American community. The course is conducted in English. This course meets the U.S. diversity requirement. Formerly IT 293. Three credits.

IT 399 Capstone Seminar

Majors in Italian participate in an interdisciplinary seminar in the spring of their senior year. The focus of this seminar varies according to the professor, but possible topics include European Film, The Grand Tour, Immigration in Europe, Capital Cities, Language Teaching and Technology, Europe and America. Students research their capstone papers in target language and present final work in English. The instructor may, in some cases, evaluate work in the target language in consultation with colleagues in the area of expertise in the department. Seminar is conducted in English. (Prerequisite: senior standing or by permission of the instructor) Three credits.

Japanese**JA 110-111 Elementary Japanese**

Designed for students with no prior experience with Japanese or whose placement scores are in the range for this course level. This two-semester sequence teaches the essentials of pronunciation, structure, and usage, allowing students to acquire the skills of listening, speaking, reading, and writing. Language cultures are explored through a variety of media. Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

JA 210-211 Intermediate Japanese

Designed for students who have completed JA 110- JA 111 or whose placement scores are in the range for this course level. This two-semester sequence prepares students to continue the study of language on a more advanced level, and includes review of essential points of grammar, vocabulary building, and regular practice in speaking and writing. The language cultures are explored through a wide variety of materials (literary texts, press articles, films, etc.). Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

Portuguese

PG 110-111 Elementary Brazilian Portuguese

Designed for students with no prior experience with Portuguese or whose placement scores are in the range for this course level. This two-semester sequence is designed to present the student with the essentials of pronunciation, structure, and usage, allowing students to acquire the skills of listening, speaking, reading, and writing. Cultures are explored through a variety of media. The course will broaden the students' understanding of the cultures of the different countries where Portuguese is spoken, especially Brazil. Three credits per semester.

PG 210-211 Intermediate Brazilian Portuguese

Designed for students who have completed PG 110-111 or whose placement scores are in the range of this course level. This two-semester sequence continues to build upon the skills acquired in the first-year sequence. The course focuses on increasing the development of communication and comprehension skills while exploring in more depth the complexity of the Brazilian Portuguese language. Emphasis is placed on the development of listening, speaking and writing skills, as well as the development of cultural literacy. Cultural emphasis is placed on the regions of Brazil and Luso-Brazilian cultures, human ecology and resource management. Three credits per semester.

Russian

RU 110-111 Elementary Russian

Designed for students with no prior experience with Russian or whose placement scores are in the range for this course level. This two-semester sequence teaches the essentials of pronunciation, structure, and usage, allowing students to acquire the skills of listening, speaking, reading, and writing. Language cultures are explored through a variety of media. Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

RU 210-211 Intermediate Russian

Designed for students who have completed RU 110- RU 111 or whose placement scores are in the range for this course level. This two-semester sequence prepares students to continue the study of language on a more advanced level, and includes review of essential points of grammar, vocabulary building, and regular practice in speaking and writing. The language cultures are explored through a wide variety of materials (literary texts, press articles, films, etc.) Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

Spanish

SP 110-111 Elementary Spanish

Designed for students with no prior experience with Spanish or whose placement scores are in the range for this course level. This two-semester sequence teaches the essentials of pronunciation, structure, and usage, allowing students to acquire the skills of listening, speaking, reading, and writing. Language cultures are explored through a variety of media. Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

SP 115 Elementary Intensive Spanish

This is an intensive course for near beginners aiming to develop in one semester the language skills expected of students after two semesters in a regular Spanish course. It is offered in the fall semester. This course teaches the essentials of pronunciation, structure, and usage, allowing students to acquire the skills of listening, speaking, reading, and writing. Language cultures are explored through a variety of media. Students attend three 1 hour and 40 minute classes per week and do mandatory online work. After completion of this course, students are expected to take SP 215 to fulfill the language requirement. Six credits.

SP 208 Intermediate Spanish for Health Professionals

This course covers the same language skills as the first part of Spanish Intermediate (SP 210) with an emphasis on vocabulary and content related to the medical field. Participants will continue the study of Spanish language on a more advanced level and will review essential points of grammar, vocabulary, and regular practice in speaking and writing. The course will provide the necessary language skills to deal with Spanish speaking patients in health care delivery in hospitals and doctor's offices, for the reception, general examination, symptoms, and prognosis. This course will also explore the diversified Spanish cultures through a variety of materials (Spanish health magazines, literature, or Internet) and their role in health idioms and phraseology. Students attend three classes per week. Note: This course does not fulfill any part of the language requirement. (Prerequisite: SP 111 or equivalent) Three credit.

SP 210-211 Intermediate Spanish

Designed for students who have completed SP 110- SP 111 or whose placement scores are in the range for this course level. This two-semester sequence prepares students to continue the study of language on a more advanced level, and includes review of essential points of grammar, vocabulary building, and regular practice in speaking and writing. The language cultures are explored through a wide variety of materials (literary texts, press articles, films, etc.). Students attend three classes per week and do mandatory online work determined by the instructor. Three credits per semester.

SP 215 Intermediate Intensive Spanish

This is an intensive course designed as a continuation of Elementary Intensive Spanish, SP 115. It is offered in the spring semester. This course aims to develop in one semester the language skills expected of students after two semesters in a regular Intermediate Spanish course. This course teaches the essentials of pronunciation, structure, and usage, allowing students to acquire the skills of listening, speaking, reading, and writing. Language cultures are explored through a variety of media. (Prerequisite: SP 115) Six credits.

SP 220 Topics in Language & Culture

This course improves proficiency in written and oral expression by focusing on particular topics in Spanish language and culture. Students develop advanced writing and speaking skills while concentrating on grammar, style, and appropriateness. Weekly compositions, based primarily on the genres studied (short story, theater, memoirs, essay) allow students to identify and correct grammatical mistakes. Students present speeches in class and conduct situational dramas such as job interviews, television reporting, courtroom trials, debates in Spanish. Films and various cultural artifacts (comic strips, proverbs, songs) familiarize students with idiomatic Spanish. (Prerequisite: SP 211 or equivalent or by permission of the instructor) Three credits.

SP 225 Spanish and English in Contrast

This class offers an in-depth review and study of the more problematic aspects of Spanish grammar for English speakers and provides students with the essentials of their own native grammar necessary to comprehend the similarities between English and Spanish. (Prerequisite: SP 211) Three credits.

SP 231 Career-Oriented Spanish

This course, for students who wish to acquire a skill that provides a career asset and who want to continue their work in written and spoken Spanish, uses papers and classroom discussion to emphasize Spanish vocabulary that relates to business, law, medicine, social work, and other professions. (Prerequisite: SP 221, SP 222, or equivalent) Three credits.

SP 245 Analysis and Interpretation of Hispanic Literature

The course provides students with the fundamentals of literary analysis in the genres of poetry, narrative, theater, and film. It uses materials from around the Hispanic world to present a broad historical-cultural context for further reading and to sharpen the skills of analysis, argumentation, speaking, and writing. Focused on a literary study whose critical terms derive from the structure of literature itself (plot, scene, shot, verse, etc.), the course includes a survey of the periods of literary history. Students complete critical papers. (Prerequisite: SP 221 or permission of instructor) Three credits.

SP 251 Spanish Civilization and Culture

This course presents the main currents of Spanish civilization by means of lectures and student participation in written and oral reports. Studies of the geography, history, literature, and fine arts of Spain underscore class discussions. Three credits.

SP 253 Spanish-American Civilization

This course presents a general view of Spanish-American civilization from pre-Columbian times to the present. Participants study the culture, social history, and politics of Spanish-America through select literary readings, articles, documentaries, films, newspapers, and Internet research. The course includes a special topic covering the globalization in Latin America and its impact in the 21st century. Students complete exams, oral presentations, written papers, and a final paper. This course meets the world diversity requirement. Three credits.

SP 271 Hispanic Film

This course examines and analyzes film by Spanish and Latin-American directors (Buñuel, Saura, Littin, Sanjines, etc.). Students initially study films as an independent genre using specific structural form as the means of analysis (close-up, soundtrack, frame, etc.). Students then begin to formulate interpretations that move between the formal, technical composition of films and the concrete socio-historic and cultural reality to which each film refers. Course activities include screening of films, discussion of articles that deal with literary theory and analysis of film, and writing short papers. This course meets the world diversity requirement. (Prerequisite: SP 221 or permission of the instructor) Three credits.

SP 285 Introduction to Spanish Linguistics

This course is an introduction to the scientific study of language, with a focus on Spanish. It particularly aims at the descriptive level, that is at the understanding of the mechanisms of the language in the various areas: how sounds are articulated and work within a system (phonetics and phonology); how small units with meaning are combined to form words (morphology); how words are combined to form sentences (syntax); how meaning is attached to the different units, and how meaning operate at different levels (semantics). It explores such basic fields of linguistic analysis within the context of current linguistic theories. It also explores the notion of linguistic variation, both geographical and social. Taught in Spanish. Three credits.

SP 301 Love, Life, and Death in Spanish Literature

This course, open to juniors and seniors only, presents a thematic view of Spanish literature from its origins to the end of the 18th century. When possible, students analyze and discuss complete works in class. Students are advised to complete SP 245 or a course similar to the content of SP 245 prior to enrolling in SP 301. (Prerequisite: permission of instructor) Three credits.

SP 303 From Empire to Modernization in Spanish American Literature

This critical study of the principal authors and works from European contact with indigenous cultures to the end of the 19th-century provides students with an understanding of the origins and some of the preoccupations of Spanish-American literature through critical analysis of documents of travel, discovery, descriptions of the struggles for independence, rural versus urban life, and modernismo. The course may require critical papers and oral reports. Open to juniors and seniors only. Students are advised to complete SP 245 or complete a study abroad course similar to the content of SP 245 prior to enrolling in SP 303. (Prerequisite: permission of the instructor) Three credits.

SP 305 Popular Culture in Latin America

This course examines the interaction among mass, elite, traditional, and indigenous art forms, their relationship with the dynamics of national/cultural identity in Latin America in the 19th and 20th centuries, and globalization. Forms of expression include oral poetry and narrative; the folletín (19th-century melodramas by installment) to 20th-century "fotonovelas," "radionovelas," and "telenovelas"; broadsides; comics; musical and political movements such as neo-folklore, new song, Nueva Trova, and Rock Latino; artistic movements such as Mexican muralist; traditional and popular crafts; cooking; popular dance; and film. Open to juniors and seniors only. (Prerequisites: SP 253 and permission of the instructor) Three credits.

SP 311 Glory, Splendor, and Decay: Spanish Golden Age Literature

This course studies the most important literary manifestations of the 16th- and 17th-centuries' Golden Age Spanish culture, with emphasis on Cervantes, Tirso de Molina, Lope de Vega, Quevedo, Góngora, and Calderón de la Barca. Open to juniors and seniors only. (Prerequisite: permission of the instructor) Three credits.

SP 331 Love and Deception in 19th-Century Spanish Literature

Students study and analyze representative works of the romantic and realist movements. The course emphasizes theatre and poetry, or the novel, depending on students' needs. Juniors and seniors only. (Prerequisite: permission of the instructor) Three credits.

SP 341 20th-Century Spanish Literature

This course examines works and literary movements from the early part of the 20th century (Generation of '98) to present times. Representative authors include Unamuno, Baroja, Valle-Inclán, García Lorca, J.R. Jiménez, Cela, Laforet, Delibes, and Matute. Open to juniors and seniors only. (Prerequisite: permission of the instructor) Three credits.

SP 346 Memory, Amnesia and Engagement in Contemporary Spanish Theater

This course examines how Spanish theater has engaged with the memory of historical moments such as the Spanish Civil War (1936-39), the ensuing Franco dictatorship (1939-75), and terrorism under democratic rule, particularly the post-9/11 terrorist bombings in Madrid. While reading a selection of contemporary Spanish plays, we will study the strategies used by playwrights to evoke or avoid the historical memory of these events. We will put into practice much of what we study in class when we produce our own staged reading of one of the plays. (Prerequisite: SP 245) Three credits.

SP 353 Spanish-American Narrative

This critical analysis and discussion of key words of the narrative genre emphasizes the 20th-century development of the novel and short story. Authors include Azuela, Quiroga, Borges, Bombal, Somers, Cortázar, García Márquez, Fuentes, Ferré, and Allende. The course also considers experimental writing, the short story of fantasy, testimonio, and others, and requires critical papers and oral reports. Open to juniors and seniors only. (Prerequisite: permission of the instructor) Three credits.

SP 357 The Spanish Novel

This course studies the novel of Spain from its first tentative manifestation with the picaresque through its major development with Cervantes and into the 20th century, emphasizing the works of more important writers. Open to juniors and seniors only. (Prerequisite: permission of the instructor) Three credits.

SP 359 Culture, Civilization, and Literature in the Spanish-American Caribbean Region

This study and explanation of distinctive elements of Puerto Rico, Cuba, Dominican Republic, and Central American countries focuses on the fusion of indigenous, Black, and Hispanic as manifestation in the Spanish-American Caribbean Region. Students will read, study, and critically analyze relevant documents, and cultural materials from pre-Columbian populations until the contemporary period. Juniors and seniors only. This course meets the world diversity requirement. (Prerequisite: permission of the instructor) Three credits.

SP 360 Dictatorships and Revolutionary Movements in Contemporary Latin America

This course will analyze various revolutionary movements in Latin America as well as the dictatorships that emerged in early 20th Century and ended almost at the turn of the century. We will discuss the new "neo socialist" governments that have emerged in XXI Century Latin America since the end of the Socialist Block (1990's), under the dominant global economy. In this class we will read, analyze, and discuss critical essays and literature (narrative, poetry, and testimonies), and other cultural forms (such as fiction and documentary films, art, music, etc.). This course meets the world diversity requirement. (Prerequisite: SP 245 and SP 253 or SP 359) Three credits.

SP 363 Literature and Culture of the Hispanic Caribbean Migration and Diaspora

This course explores the overlapping experiences of migrations and diaspora in the Hispanic Caribbean. The course reviews the history of Caribbean migrations and the experiences of Caribbean migrants in the United States through major literary works of Puerto Rico, Dominican Republic and Cuba. With its complex racial, cultural and linguistics mixture, the Caribbean is where today's globalization began, over 500 years ago. Students will draw on an interdisciplinary approach: historical, sociopolitical, ethnic, multi-linguistic and global contexts. Films and oral presentations are part of the course. This course is taught in Spanish. (Prerequisites: SP 245 and SP 253) Three credits.

SP 371 Images of Latin American Indians

This course examines the vision of Latin American Indians from the first letters of the "discoverers" and conquistadores (Colón, Cortés, Bernal Díaz del Castillo), and missionaries (Bartolomé de las Casas) through relevant novels, short stories, and films of the 19th and 20th centuries. To understand the post-discovery vision of the Indians, this course also studies the major pre-Columbian civilization of Mesoamerica and the Andean region. Authors include: Matto de Turner, Icaza, Arguedas, Castellanos, and others. Open to juniors and seniors only. This course meets the world diversity requirement. (Prerequisite: permission of the instructor) Three credits.

SP 381 Coordinating Seminar: Exit Research Study

Students in the spring of their senior year must complete a research study paper for the major. The student chooses from a list of topics or books offered by professors from the Spanish section. (Prerequisite: permission of the instructor) Three credits.

SP 377-378 Internship

The internship program gives students first-hand experience in the fields of translation, interpretation, cataloging, public relations, advertising, teaching, etc., in the language of their specialization. Department members, who agree to guide the endeavor, supervise student work. When required by a faculty supervisor, evaluation of student interns may be required from the institution where students work. The student's work should demand no less than one full day per week, or its equivalent. Open to juniors and seniors only. Three credits per semester.

SP 382 Coordinating Seminar/Independent Study

Students undertake readings and studies in a specialized area of Spanish, under the direction of a staff member. Designed to fill the special needs of specific students, this course is offered at the discretion of the department chair. Hours by arrangement. Open to juniors and seniors only. Three credits per semester.

Program in Peace and Justice Studies

The Peace and Justice Studies program is an expression of the Jesuit educational commitment, which is fundamentally identified with the promotion of the values of peace and justice. The program is based on the principle that true peace is not only the absence of hostilities, but also requires the establishment of a just social order providing a decent and dignified life for all. The program gives focus and substance to concerns about troubling social and political issues while providing the academic and real-world skills to address them.

Accordingly, the minor provides students with an opportunity to study systematically a variety of issues in world peace and social justice, including how religions and philosophical traditions approach these values, and the ways in which people from across the globe engage to create positive change for the future.

For a 15-credit minor in peace and justice studies, students complete:

- PO 115 Introduction to the Study of Peace and Justice,
- Three electives from the University curriculum chosen in consultation with the director of the minor, and
- PJ 398 Capstone Research Seminar.

Students pursuing a peace and justice studies minor may also elect PJ 298 Internship in Advocacy and Community Organizing. This internship provides students in the minor with the opportunity to understand, through direct participation, how citizens organize to empower their communities and promote policies that will benefit them. Interns are often placed with community organizations in the greater Bridgeport area and some placements include advocacy work in the state legislature in Hartford. The internship is currently an elective and not required of students in the minor.

The introductory course, PO 115, and the concluding seminar, PJ 398, are required for the minor. Students select three electives, with approval of the director, from courses in the University curriculum relevant to the study of peace and justice.

Course Offerings

Below are examples of courses that fulfill the elective requirement. This list is suggestive only. Numerous other courses may also serve as electives; consult with the director for additional information.

AE 276 Ethical Dimensions of Global Business Practices
 AE 283 Environmental Justice
 AE 284 Environmental Ethics
 AE 297 Eco-feminism
 EN 113 Literature of the Holocaust
 EN 114 Caribbean Literature: History, Culture, and Identity
 EN 262 The Harlem Renaissance
 HI 257 Who Built America? Working People in American History
 HI 274 Historical Perspectives on Contemporary Global Crises
 IL 51/PO 130 Challenges of Global Politics
 PH 263 The Concept of Human Rights
 PH 260 Social and Political Philosophy
 PO 116 Utopian Politics
 PO 147 Northern Ireland: The Politics of War and Peace
 PO 153 The Politics of Race, Class and Gender
 RS 235 Liberation Theology
 RS 255 Catholic Social Teaching
 SO 161 American Class Structure
 SO 162 Race, Gender and Ethnic Relations
 SO 179 Death Penalty in America
 SO 181 AIDS in the United States

Course Descriptions

PO 115 Introduction to the Study of Peace and Justice

This course introduces students to the concepts of peace and justice, the connections between them, and the relationship of these concepts to the idea of faith. The course focuses on case studies beginning with an analysis of the crisis of America's cities and finds the causes in de-industrialization and its resulting poverty, which is compared to the poverty in developing nations. In both cases, the course views poverty as the effect of unjust economic and social structures including exaggerated military budgets at home and the militarization of developing countries. Examining these fundamental problems in peace and justice, according to the principles of Marxism, liberalism, and Catholicism, provides a theoretical basis for the study. Each of these traditions has its own perspective for understanding these problems and for responding to them. In this way the course provides an awareness of the major problems in peace and justice as well as an understanding of the different ways to think about them. Three credits.

PJ 298 Internship in Advocacy and Community Organizing

This internship provides students in the minor with the opportunity to understand, through direct participation, how citizens organize to empower their communities and promote policies that will benefit them. Interns are placed with community organizations in the greater Bridgeport area and some placements include advocacy work in the state legislator in Hartford. The internship requires a journal and final reflection paper based on analysis of the site experience and its relationship to peace and justice. (Prerequisite: permission of the program director). Three credits.

PJ 398 Capstone Research Seminar

This course creates a context for integrating and reflecting on experiences and knowledge acquired in the program by providing the students the opportunity to examine how their major connects to the values and practices of peace and justice. Students undertake a major research project focused on applying their practical engagement with peace and justice issues to broader theoretical frameworks with attention to contemplating a vision for change in the future. The course is built around student-led discussion and an in-depth research project that analyzes an issue from the student's major area of study through the lens of peace and justice. Three credits.

According to Plato's Socrates, the love of wisdom (*philosophia*) begins in wonder. In the nearly 2,500 years since Plato made this observation, philosophy has evolved into a vocation of incessant questioning in which nothing is taken for granted. Today, philosophers from a variety of traditions and spheres of inquiry continue to grapple with the field's most enduring questions, questions like: Who am I? Why am I here? What is the nature of reality? How do I know? What should I do? The Department of Philosophy invites students to take up this vocation by introducing them to its history and aiding them in cultivating the critical and creative thinking necessary for its study.

The Department of Philosophy has adopted the following Student Learning Goals:

- The ability to identify arguments and provide counter-arguments,
 - The critical engagement with and the questioning of one's assumptions.
 - The thoughtful integration of action with values,
 - The existential risking of crisis and transformation through self-reflection.
 - The acceptance of the invitation of philosophy to wonder at the big questions.
-

The Department of Philosophy has also adopted the following Student Learning Objectives:

- **Thinking Skills:** Students should be able to construct (or re-construct) a philosophical argument, both verbally and in writing. They should be able to anticipate and clearly articulate counter-arguments. Students should be able to recognize and question their own assumptions/prejudices. Students should be able to frame questions aware that what is asked often determines the response.
- **Reading Skills:** Students should be able to interpret texts and to recognize and reflect on textual ambiguities. Students should be able to discern the steps of a philosophical argument, as well as the stated and (more importantly) unstated presuppositions of the argument.
- **Writing Skills:** Students should be able to write logically compelling arguments in a clear, concise, and well-ordered manner.
- **Familiarity with some of the central philosophical questions in the history of philosophy (broadly construed):** Students should have a rudimentary knowledge of the history of philosophical questions and their attendant concepts and arguments, and be able to recognize versions of these questions in contemporary philosophical discussions. Students should be able to recognize and articulate alternative perspectives to the problems and claims with which they are confronted in contemporary life.
- Students should be able to reflect critically on philosophical questions in the context of their own lives.

In addition to offering core courses in Area III, the department offers both a major and minor in philosophy.

Requirements

Core Requirements in Philosophy:

First Core Course in philosophy: PH 101: Introduction to Philosophy.

Second Core Course in philosophy: any PH 200 level course.

Any PH 200 or 300 level course may be taken to fulfill the fifth course in Core Area III.

Requirements for Major and Minor in Philosophy:

30 Credit Major in Philosophy:

- PH 101: Introduction to Philosophy.
- One PH 200 level course.
- One course that provides an intensive study of a major philosopher such as Plato, Aristotle, Augustine, Kant, Aquinas, or Nietzsche, and that emphasizes primary sources (that is, one course from PH 300-319).
- PH 217: Logic.
- Six additional PH 200 or 300 level courses chosen with departmental guidance.
 - At least two of these six courses must be PH 300 level courses.
 - Two of these six courses may be 200 or 300 level applied ethics courses.

15 Credit Minor in Philosophy:

- PH 101: Introduction to Philosophy.
- One PH 200 level course.
- Three additional philosophy courses chosen with departmental guidance.
 - At least one of these three courses must be a 300 level philosophy course.
 - One of these three courses may be a 200 or 300 level applied ethics course

Course Descriptions

PH 101 Introduction to Philosophy

This course is a topical introduction to philosophy. The aim of the course is to introduce students to the vocation of wonder and questioning by engaging students in discussions about some of the basic questions of philosophy. Students will read texts from historical and contemporary writers, and will be asked to develop their own skills of thinking, reading, and writing critically. Note: Students with credit for PH 10 may not receive credit for PH 101. Three Credits.

PH 200 Ancient Philosophy

In this course we will investigate how the earliest practitioners of Western philosophy conceived of their own activity. The word 'philosophy' stems from two ancient Greek words and means, literally, 'love of wisdom.' A lover of wisdom is one who pursues wisdom rather than possesses it; consequently, we can think of ancient philosophers as founding a history of inquiry into questions whose relevance for human beings ensures their persistence, questions like: What is the nature of the universe? What can be known? and What in any given situation is the right thing to do? (Prerequisite: PH 10 or PH 101) Three credits.

PH 201 Medieval and Renaissance Philosophy

This course will examine texts from representative thinkers from Augustine of Hippo in the period of the post-Constantinian Empire to Thomas More in the Renaissance, all sharing the new conception of philosophy. For Christians, as well as for Muslims and Jews, the enterprise of philosophy took on new motivation—the understanding of one’s faith—and addressed new problems, not considered by the ancient Greeks and Romans. (Prerequisite: PH 10 or PH 101) Three credits.

PH 202 Modern Philosophy

In light of the development and success of the new mechanistic science in the 17th and 18th centuries philosophers began to reexamine such fundamental philosophical topics as the nature of the human mind, the relationship between the mind and body, the source and scope of human knowledge, the existence of a divine being, and the source and nature of morality. In this course we will trace the development of philosophical thought in the writings of modern philosophers such as Bacon, Descartes, Spinoza, Leibniz, Locke, Berkeley Hume, Reid, and Kant. (Prerequisite: PH 10 or PH 101) Three credits.

PH 203 19th Century Philosophy

This course examines the representative philosophers of the 19th century, notably Kant, Fichte, Schelling, Hegel, Schleiermacher, Schopenhauer, Nietzsche, Kierkegaard, and Marx. (Prerequisite: PH 10 or PH 101) Three credits.

PH 204 20th Century Philosophy

This course presents a coherent picture of the main currents of contemporary philosophy in the Western and the non-Western tradition: phenomenology and existentialism, pragmatism and analytic philosophy, Marxism and dialectic materialism, and philosophy of history and culture. (Prerequisite: PH 10 or PH 101) Three credits.

PH 205 Ancient Medicine and Philosophy

The various methods for investigating the human body have been subject to foundational questions of scientific investigation, religious sanction, social condemnation and philosophical impasse. In this class, we will look at the way in which Ancient Greek medical practitioners and philosophers took up these investigations, negotiated problems of method, and profoundly influenced the ways we talk about, think about and treat the body today. (Prerequisite: PH 10 or PH 101) Three credits.

PH 206 Philosophical Perspectives on Women in Classical Literature

Ancient Greek and Latin literature presented its audience with a cast of characters who continue to enjoy social, political and cultural currency. Antigone and Oedipus, Helen and Paris, Cassandra and Prometheus have all had a hand in shaping western thought about the natures of beauty and freedom, the limits of human knowledge, and the role of law. In this course we will focus specifically upon the literary characterizations of women found throughout the ancient Greek and Latin worlds. (Prerequisite: PH 10 or PH 101) Three credits.

PH 207 Augustine, Pascal, and Camus

This course takes as its focus the rich and enduring philosophical synthesis of the Bishop of Hippo as compared with two of his modern/contemporary disciples, Blaise Pascal and Albert Camus. These three thinkers came from three very different eras, and these differences should not be minimized. However, students discover a common strain in their thinking during this course. (Prerequisite: PH 10 or PH 101) Three credits.

PH 208 Mysticism and Philosophy

This course studies and compares the sometimes conflicting, sometimes complementary traditions in the history of thought: the intellectual and the affective or mystical. One stresses the ability of the reason to know, even something of the divine; the other abandons the reason for the "one thing necessary." Philosophers include Plotinus, Augustine, Pseudo-Dionysius, Bernard, Bonaventure, Thomas d'Aquino, Eckhart, and Dante. (Prerequisite: PH 10 or PH 101) Three credits.

PH 209 Existentialism

The word, 'existentialism' describes a particular attitude toward the creation of meaning out of an inherently meaningless existence. Despite the diversity within the tradition, the 'existentialists' of the 19th and 20th century often address questions pertaining to human freedom and responsibility, values and nihilism, anguish and affirmation, authenticity, and the absurd. This course traces how existentialism has answered these questions. In so doing, students are encouraged to rethink the foundation of their own existence and personal values, while understanding the implications of Dostoevsky's "If God is dead, then everything is permitted" and Sartre's "Man is condemned to be free." (Prerequisite: PH 10 or PH 101) Three credits.

PH 210 Phenomenology

This course introduces students to phenomenology. Considered by many to be the most important theoretical movement of the 20th-Century, phenomenology is both a philosophical tradition and a method. From its founder Edmund Husserl to authors like Heidegger, Merleau-Ponty, Sartre, Derrida, and Levinas, to more recent voices in broader gender and race discussions, phenomenology still has significant influence today in existentialism, hermeneutics, and deconstruction. Students will engage in questions such as these: What is phenomenology? How is it practiced? What distinguishes this method from other approaches? What are its key contributions? (Prerequisite: PH 10 or PH 101) Three credits.

PH 211 American Philosophy

This course examines the origin and development of the American philosophical tradition and its culmination in pragmatism, including the relation of philosophical ideas in America to literature, religion, and politics. The course emphasizes the writings of Jonathan Edwards, Ralph Waldo Emerson, Charles Sanders Peirce, William James, and John Dewey. (Prerequisite: PH 10 or PH 101) Three credits.

PH 212 Critical Theory

This course examines the 20th century philosophical movement of cultural critique arising out of the association of German Jewish scholars known as the Frankfurt School. Central problems within this movement include the persistence of violence within human reason, the various forms and forces of ideology, the relation of political activity to artistic activity, the proper undertaking of immanent social critique, and the possibility of freedom in societies that are increasingly authoritarian. Representative thinkers within this field include Theodor Adorno, Max Horkheimer, Herbert Marcuse, Erich Fromm, and Walter Benjamin. (Prerequisite: PH 10 or PH 101) Three credits.

PH 215 Philosophy of Science

Science and philosophy have always proceeded hand in hand, with the major figures in Western science being heavily influenced by the philosophy of their times and the major figures in Western philosophy heavily influenced by the science of their times. In this course we will explore the inter-connections between philosophy and science. In doing so we will find some of the most deep, difficult, and fundamental questions there are, but with the "lens of science," so to speak, focusing these questions more sharply than they are often otherwise focused. (Prerequisite: PH 10 or PH 101) Three credits.

PH 216 Philosophy and Biology of Evolutionary Theory

This course explores the question of evolutionary theory from the perspectives of philosophy and biology. From the biological perspective, the course focuses on genetics, adaptive evolution, neutral evolution, the genetic impact of selection on populations, the origin and maintenance of genetic variation, the importance of development in evolution, the expression of variation, and coevolution. From the philosophical perspective, the course focuses on evolution as theory and ideology, the critique of the adaptationist program, evolution and contingency, typological versus population thinking, and the developmental systems critique. (Prerequisite: PH 10 or PH 101) Three credits.

PH 217 Logic

This course provides a basic acquaintance with prevailing systems and methods of logic, notably traditional (Aristotelian) and modern (standard mathematical) logics. (Prerequisite: PH 101) Three credits.

PH 220 Philosophy of Religion

This course inquires into the nature of religion in general from the philosophical point of view. That is, it employs the tools of critical analysis and evaluation without a predisposition to defend or reject the claims of any particular religion. (Prerequisite: PH 10 or PH 101) Three credits.

PH 221 The Question of Religion

Nineteenth- and 20th-century continental philosophy calls into question the traditional understanding of religion, God, transcendence, incarnation, sacrifice, responsibility, evil, and ritual. This course explores the transformation of the traditional understanding of these ideas in the wake of thinkers such as Hegel, Kierkegaard, Nietzsche, Heidegger, Bataille, Lacan, Levinas, Girard, Nancy, Derrida, and Marion. (Prerequisite: PH 10 or PH 101) Three credits.

PH 222 Evil

This course explores the problem of evil from the perspectives of theology and philosophy. The course considers God and evil, classical theodicies (reasonable justifications of God before the prevalence of evil), modern philosophical accounts of evil, social evil, and the possibility of belief in the face of evil. Within the context of these subjects, the course addresses the following questions: What is evil? What are the roots of evil? What effect does an individual's understanding of evil have on his or her understanding of the human being, of God, and of religion? What is our responsibility in the face of evil? (Prerequisite: PH 10 or PH 101) Three credits.

PH 223 The Problem of God

This course studies the problem of the existence of God, including the metaphysical and epistemological issues entailed therein, as developed by such thinkers as Augustine, Anselm, Aquinas, Descartes, Hume, Spinoza, Kant, and Hartshorne. (Prerequisite: PH 10 or PH 101) Three credits.

PH 240 Introduction to Asian Philosophies

This course provides a philosophical overview of the major philosophical traditions that originate in Indian and China, including significant philosophical responses and contributions to them from throughout greater Asia. These traditions include, but are not limited to, Hinduism, Buddhism, Confucianism, and Daoism. Emphasis is given to philosophical exegesis of texts and practices; some comparison with Western traditions may also be included. *This course meets the world diversity requirement.* (Prerequisite: PH 10 or PH 101) Three credits.

PH 241 Confucianism

Confucianism is a reflective tradition that for over 2500 years has shaped social norms and moral values in East Asia. It underlies traditional political theory and religious practice and remains the template for social interactions. In this course we examine the Confucian tradition through its major figures and primary texts, from the Analects of Confucius (551-479 BCE) to the writings of contemporary Confucians. Emphasis is given to drawing out the philosophical content of Confucian thought by engaging both traditional commentaries and recent philosophical interpretations. We also assess the appropriateness of regarding certain practices and institutions as Confucian. *This course meets the world diversity requirement.*

Prerequisite: PH 10 or PH 101) Three credits.

PH 242 Philosophical Daoism and Zen Buddhism

This course explores writings and philosophical influences of Daoism and Zen Buddhism in East Asia and in the West. The key philosophical themes covered are the related ideas of non-action (wuwei) and empty-mind (mushin). Emphasis is given to philosophical exegesis of these themes and their potential application to ideals of personal, moral, and professional integrity. The course includes reading and discussion of historical and contemporary texts. It may also involve exploratory, reflective engagement in Dao and Zen associated activities such as breathing meditation, T'ai Chi exercises, brush-calligraphy, haiku composition, or archery. *This course meets the world diversity requirement.* (Prerequisite: PH 10 or PH 101) Three credits.

PH 250 Ethical Theory

This course presents an in depth examination of how moral judgments are justified. The history of philosophy has led to a number of different theoretical frameworks that seek to set out methods for moral justification. We examine several of these methods and reflect upon how they support and/or contradict each other and what is at stake when moral systems conflict. In addition to examining the writings of philosophers such as Plato, Aristotle, Hobbes, Kant, Nietzsche, Mill, and Rawls, students will be asked to consider how these theoretical frameworks apply in actual cases. (Prerequisite: PH 10 or PH 101) Three credits.

PH 251 Ethical Theories in America

This course examines the growth and development of ethical theory in America. America's first philosophers, Jonathan Edwards, Benjamin Franklin, Thomas Jefferson, et al, distinguished their philosophies in terms of religious, political, and social values. This ethical stance became a tradition in America. The course examines this tradition in the writings of representative American philosophers. (Prerequisite: PH 10 or PH 101) Three credits.

PH 260 Social and Political Philosophy

This course analyzes the writings of leading social and political thinkers, with special consideration of the movements of protest and dissent. (Prerequisite: PH 10 or PH 101) Three credits.

PH 261 Political Philosophy: Plato to Machiavelli

This course considers the evolution of political thinking from the golden age of Athenian democracy to the dawn of the modern period. It takes as its focus the changing views of the body politic from Plato through Augustine, Thomas Aquinas, and Marsilius to Renaissance thinkers like More and Machiavelli. (Prerequisite: PH 10 or PH 101) Three credits.

PH 263 The Concept of Human Rights

Bosnia, Somalia, Guatemala, the Holocaust - the notion of human rights and accusations of human rights violations are a constant presence in our political environment and in the formulation of U.S. foreign policy. This course follows the emergence of this concept from the political and ethical thought of the Greeks, to the Enlightenment, to the explicit formulation of "human rights" in the 20th century as a guiding principle of international relations. (Prerequisite: PH 10 or PH 101) Three credits.

PH 264 Philosophy of Law

This course examines the major questions of legal philosophy, the nature of legal rights and legal duties, the definition of law, and the grounds of legal authority. (Prerequisite: PH 10 or PH 101) Three credits.

PH 270 Aesthetics

The course examines aesthetic experience and concepts like imitation, expression, and psychic distance; considers the relationships among the various arts; and explores the role of art in life. (Prerequisite: PH 10 or PH 101) Three credits.

PH 271 Philosophy and Tragedy

This course explores various works on tragedy by, for example, Plato, Aristotle, Hegel, Kierkegaard, Nietzsche, Freud, Heidegger, Lacan, Derrida, and Irigaray, which are read alongside various tragedies such as Sophocles' Oedipus the King and Antigone, and Shakespeare's Hamlet. (Prerequisite: PH 10 or PH 101) Three credits.

PH 288 Social and Political Philosophy

This course analyzes the writings of leading social and political thinkers, with special consideration of the movements of protest and dissent. (Prerequisites: PH 10 and one 100-level philosophy course) Three credits.

PH 299 Special Topics

This course explores a specific topic in the discipline of philosophy, in an effort to deepen students' vocations of incessant questioning not only by exploring a specific thinker, question, or historical period, but also by further developing their own thinking, reading, and critical writing skills. (Prerequisite: PH 10 or PH 101) Three credits.

PH 300 Plato

This course covers central ontological and epistemological themes in selected early, middle, and late Platonic dialogues, paying particular attention to Plato's inclination to identify virtue with knowledge. (Prerequisites: two previous courses in philosophy) Three credits.

PH 301 Aristotle

This course introduces Aristotle through a selection of his works, exploring their relation to other works, their place in the scheme of the sciences, and thoroughly investigating their subject matter. (Prerequisites: two previous courses in philosophy) Three credits.

PH 304 Aquinas

This course focuses on Aquinas's most mature work, *Summa theologiae*. This work exemplifies the Christian intellectual reaction to Islamic Aristotelianism, while at the same time bearing witness to Thomas's belief in the unity of truth. The course examines and analyzes such questions as the existence and intelligibility of God, the nature and powers of the human composite, human destiny, the human act, good and evil, providence and freedom, natural law, and the virtues. (Prerequisites: two previous courses in philosophy) Three credits.

PH 307 Descartes

Three years after he finished college, Descartes got stuck in a snowstorm on his way to fight in a war. Alone in his room, he reflected on his education, coming to believe that many of the things he had been taught in college were pretty dubious. He also realized that he had believed many things all his life without giving thought to his reasons for believing them. He decided the best thing he could do was rid himself of all his old beliefs and then, relying only on his own mind, replace them with only those beliefs for which he could find good reasons. This course discusses the development and results of Descartes' search for truth. (Prerequisites: two previous courses in philosophy) Three credits.

PH 309 G. W. Leibniz

Can everything in the world be rationally explained? Even the existence of the world itself? G. W. Leibniz (1646-1716) thought so. Together with his understanding of the nature of truth, this led him to some startling conclusions, such as nothing causally interacts with anything else, everything internally reflects everything else, and even though evil exists this is the best of all possible worlds. In this course we examine these conclusions as well as Leibniz's theories about such puzzling topics as the nature of the mind, body, God, freedom, and space. (Prerequisites: two previous courses in philosophy) Three credits.

PH 310 Hume

This course offers an in-depth understanding of the philosophy of David Hume. Hume, one of the most interesting (and influential) of the 18th-century philosophers, made major contributions to our understanding of causation, morality, and the mind, to name just a few. Hume began with principles that seemed quite plausible but, taking these ideas to their logical conclusions, arrived at a philosophy that is, to say the least, surprising. (Prerequisites: two previous courses in philosophy) Three credits.

PH 311 Kant

Almost everyone recognizes that through experience the human mind is shaped by the world. Immanuel Kant, however, argued for the revolutionary claim that the world is shaped by the human mind. In developing this position Kant was led to formulate a radical view concerning the nature of space and time. It also led him to draw striking conclusions about our knowledge of ourselves, objects, causation, God, freedom, and immortality - conclusions that changed philosophy forever. In this class we will study Kant's revolution in philosophy. (Prerequisites: two previous courses in philosophy) Three credits.

PH 312 Hegel

The philosophy of G.W.F. Hegel, the most famous of the German idealists, directly spawned the philosophy of Karl Marx. Hegel is considered the father of existentialism and influenced contemporary schools of critical theory, continental philosophy, and post-structuralism. This course focuses on Hegel's most famous work, *Phenomenology of Spirit*. Students learn the mechanics of dialectical reasoning by examining Hegel's reflections upon time and space, perception, scientific reasoning, the concepts of life and death, the master-slave dialectic, and self-consciousness. The course works through this text in detail, and pays particularly close attention to how Hegel interprets the philosophy of Immanuel Kant. (Prerequisites: two previous courses in philosophy) Three credits.

PH 314 Nietzsche

This course deals with the thought of one of the leading philosophical figures of the 19th century, Friedrich Nietzsche. In terms of both style and content, Nietzsche was an innovator who called into question the traditional notions of science, systematic knowledge, ethics, and culture as such. The task of the course is to examine several themes central to Nietzsche's work, among them the will to power, the perspectival approach to truth, the concept of genealogy, the revaluation of values, eternal recurrence, and the death of God. (Prerequisites: two previous courses in philosophy) Three credits.

PH 316 Bergson

This course explores the work of Henri Bergson (1859-1941). The course primarily takes the form of a close reading of *Time and Free Will* (1889), *Matter and Memory* (1911), and *The Two Sources of Morality and Religion* (1932). The course will also explore the influence of Bergson's work on contemporary philosophy, psychology, science, and religion. (Prerequisites: two previous courses in philosophy) Three credits.

PH 317 Heidegger

This course explores the work of Martin Heidegger (1889-1976), one of the most influential philosophers of the 20th century. It primarily takes the form of a close reading of *Being and Time* (1927) and *The Origin of the Work of Art* (1936). The course hinges on Derrida's reading of Heidegger's existential analysis of death. (Prerequisites: two previous courses in philosophy) Three credits.

PH 320 Metaphysics

This course concerns itself with being and our knowledge of being, developing in student minds an operative habit of viewing reality in its ultimate context. (Prerequisites: two previous courses in philosophy) Three credits.

PH 321 Knowledge

The focus of this course is to examine the fundamental questions concerning human knowledge. For example: What is knowledge? Can I know anything? Do I know something because I can trace it back to some indubitable foundation or because it fits together with everything else like a piece of a jigsaw puzzle? Can I have knowledge without being able to say how I know it? Do men and women know things in different ways? Is knowledge something I can gain on my own or is knowledge essentially a social activity? (Prerequisites: two previous courses in philosophy) Three credits.

PH 323 Philosophy of Mind

This course acquaints students with the most recent philosophical theories on the workings of the mind. Although it emphasizes philosophical theories of the mind, it also pays close attention to the philosophical implications of recent research in sciences such as psychology and neuroscience. This is an exciting topic; join us on this quest to address the Delphic dictum: Know Thyself! (Prerequisites: two previous courses in philosophy) Three credits.

PH 331 Philosophy of Language

This course introduces the student to the philosophy of language: its themes, complexities and problems. Employing a historical approach, the course surveys key philosophers who investigate the meaning, source and structure of language. Typically their primary question investigates various ways that the human person, while immersed within a context, understands language. After a brief investigation of ancient and medieval thinkers, the course focuses on a number of modern and contemporary figures who represent the mainstream discussion of the philosophy of language, including representatives of both analytic and continental traditions. (Prerequisites: two previous courses in philosophy) Three credits.

PH 360 Critical Race Theory

Although race can be considered as one of several physical features of an individual, this course will investigate the recent research and literature in the field of Critical Race Theory that critiques this purely biological conception. For the purpose of understanding how race functions in our socio-political world, this body of work treats the concept as a social construction, drawing heavily on the phenomenological and existential traditions. Pertinent themes like lived experience, authenticity, and racial privilege will be explored using key texts (by Jean-Paul Sartre, Franz Fanon, Lewis Gordon, and Robert Bernasconi, to name a few). (Prerequisites: two previous courses in philosophy) Three credits.

PH 370 Philosophy of Literature

This course examines the philosophy "of" literature (the general nature of poetry and prose) and philosophy "in" literature (specific works that harbor philosophical ideas). (Prerequisites: two previous courses in philosophy) Three credits.

PH 397 Special Topics Seminar

This course will be an in-depth exploration of a specific topic in the discipline of philosophy. It will be conducted in a seminar format and will include a significant research component. This course may be repeated for credit when the topic varies. (Prerequisite: two previous courses in Philosophy) Three credits.

PH 398 Independent Study

Upon request and by agreement with an individual professor in the department, a student may conduct a one-semester independent study on a specific philosophical topic. (Prerequisite: two previous courses in Philosophy) Three credits.

The science of physics is concerned principally with physical laws that determine the nature and interactions of matter and energy that underlie all physical phenomena. It is the fundamental science for most branches of engineering and technology, and has innumerable applications in medicine, industry, and everyday life.

The educational objectives of the Department of Physics are: (1) to prepare students for entrance into and successful completion of a graduate education in physics or related fields, and (2) to prepare students for entrance into the technological and non-technical work forces.

To accomplish these objectives, physics students are guided to an understanding of physical laws and their applications; students are trained to think logically and develop their problem-solving abilities; students develop experimental skills and become knowledgeable in the use of instrumentation; and students receive instruction in advanced mathematical and analytical techniques and in the use of computers and microprocessors. Physics majors automatically earn a minor in mathematics.

The applied component of the physics curriculum focuses on laser technology, digital electronics, electro-optics, and materials science. Students learn the fundamental physical processes that constitute the basis of modern technology. As a result, physics graduates can pursue graduate studies in any subfield of physics, follow industrial careers in research and development in corporate or industrial environments, or pursue professional careers in such fields as health, physics, computer science, medicine, biostatistics, architecture, patent/high-tech law, and science teaching.

Requirements

Bachelor of Science - Major in Physics

Credits

First Year	Fall	Spring
PS 15-16 General Physics I and II	3	3
PS 15L-PS 16L General Physics Laboratory	1	1
PS 65 Introduction to Computation Methods in Physics and the Sciences	2	
MA 145-146 Calculus I and II	4	4
EN 11-12 English	3	3
Foreign language core requirement	4	4
Arts Core requirement		3
Total	17	18

Sophomore Year

PS 285 Modern Physics	3	
PS 226 Classical Mechanics		3
PS 212 Circuit Analysis & Analog Systems	4	
PS 215 Computational Physics		3
MA 245 Calculus III	4	
CH 111-112 General Chemistry I and II	4	4
Foreign language or other core requirements	4	4
MA 321 Ordinary Differential Equations		3
Total	19	17

Junior Year

PS 271 Electricity and Magnetism I	3	
PS 371 Electricity and Magnetism II		3
PS 222 Modern Optics		3
PS 206L Modern Optics Laboratory		1
PS 241 Thermal and Statistical Physics	3	
RS 101 Exploring Religion	3	
MA 332 Partial Differential Equations		3
PH 101 Introduction to Philosophy	3	
Social Science core		3
HI 10 Origins of the Modern World	3	
200-level history course		3
Total	15	16

Senior Year

PS 204 Modern Experimental Methods Lab	2	
PS 386 Quantum Mechanics	4	
PS 388 Nuclear Physics OR		
PS 390 Special Topics		3
PS 391-392 Independent Study; credit by arrangement		
Religious studies and philosophy core requirements	3	3
Arts core requirement	3	
Social science core requirement	3	
English and Philosophy core requirements	3	3
Electives	3	3
Total	18	15

Minor in Physics

Students who major in an area other than physics can earn a 15-credit minor in physics by completing the following minimum requirements of two courses and an advanced lab beyond the introductory physics sequence:

- Introductory sequence: PS 15-16 General Physics I and II with lab (eight credits) AND
- Modern Physics (PS 285) and a three-credit course chosen among the 200- and 300-level physics courses, with the chairman's approval (six credits).
- Modern Experimental Methods Laboratory (PS 204, two credits).

Substitution of the Modern Physics courses must be approved by the chair.

Note : Biology and chemistry majors can minor in physics by taking two lecture courses and one laboratory course beyond the requirements of their major. Engineering majors can minor in physics by taking one lecture course and one laboratory course beyond the requirements of the major.

Physics Major with a Minor in Educational Studies and the 5-year teacher education program

Physics majors who elect a minor in Educational Studies and who have been admitted to the Five Year Integrated Bachelor's-Masters Degree and Teacher Certification program may count ED 462 Science Methods as their Physics 3 credit Independent Study project. Physics majors with an Education Minor should consult with Dr. Angela Biselli, education advisor, and Dr. Patricia Calderwood, director of the Five Year Integrated Bachelor's-Masters Degree and Teacher Certification program.

Course Descriptions

PS 15 General Physics I

This introductory course - for students concentrating in physics, mathematics, chemistry, or engineering - covers mechanics, heat, and fluid dynamics. It also includes rigorous mathematical derivations using integral and differential calculus. Topics include velocity and acceleration, Newton's laws of motion, work, energy, power momentum, torque, vibratory motion, elastic properties of solids, fluids at rest and in motion, properties of gases, measurement and transfer of heat, and elementary thermodynamics. Three credits.

PS 15L Lab for General Physics I

This lab course engages students in experimental measurements spanning the areas of mechanics and thermal stresses on matter, with the objective of training students in experimental measurements, data manipulation and analysis, error analysis, deductive thinking, and instrumentation, providing depth to students' understanding of the phenomena taught in PS 15. Specific experimental measurements include accelerated motion, periodic motion, gravitational force, ballistics, conservation of energy and momentum, rotational dynamics, and measurements of the coefficient of linear expansion and the heat of fusion. Students complete a weekly lab report. One credit.

PS 16 General Physics II

This continuation of PS 15 covers electricity and magnetism, light and optics, and sound. Topics include magnetism and electricity; simple electric circuits; electrical instruments; generators and motors; characteristics of wave motion; light and illumination; reflection; refraction, interference; polarization of light, color, and the spectrum; and production and detection of sound waves. Three credits.

PS 16L General Physics II Lab

This laboratory provides students with a greater understanding of electromagnetic phenomena, wave phenomena, and optics, and supports PS 16. Measurements of microscopic quantities, like the charge and mass of the electron, give students an opportunity to explore the structure of matter. Other experiments involve the physics of electrical currents, electric properties of bulk matter, magnetic fields and their effect on beams, wave phenomena, and the nature of light and its interaction with optical materials. This course trains students in experimental measurements, data manipulation and analysis, error analysis, deductive thinking, and instrumentation. Students complete a weekly lab report. One credit.

PS 65 Introduction to Computational Methods in Physics and the Sciences

This course presents an introduction to computational methods in physics and other sciences. Topics covered are problem solving, modeling, and algorithm design. Problem solving techniques are illustrated through iteration, Monte Carlo, and finite difference techniques. These problem solving techniques are applicable in upper division physics and science courses to solve advanced problems. Languages used in this course may include Basic, Mathematica, and Excel. This course does not count as a core course. Two credits.

PS 71 Physics of Light and Color

This course, intended for students who are not majoring in the physical sciences, covers the particle-wave duality of light and the relationship of light to other electromagnetic waves. Additional topics include polarization, vision, color and the perception of color, optical phenomena in nature and in biological systems, color and light in art, simple optical instruments, sources of light and their spectra, lasers, and holography. Three credits.

PS 75 Physics of the Human Body

Designed for the non-science major, this course examines the functionality of the human body from a physics perspective. The course introduces introductory level physical principles and applies them to various body systems. Topics include the mechanical efficiency of the body and its heat management; fluid pressures; flow processes; forces and muscles; skeleton, bones, and lever systems; lungs and breathing; cardiovascular system; sound, speech, and the hearing system; and optical imaging and the vision system. The course, offered in common vernacular language, emphasizes conceptual understanding. Three credits.

PS 76 Physics of Sound and Music

Designed for the non-science major, this course examines the physical principles in the production of sound, with an emphasis on sound produced by musical instruments. Topics include the nature of wave motion as produced by vibrating strings and organ pipes, harmonic content, musical scales and intervals, and the mechanism of the hearing process. The course applies concepts to the construction and characteristics of musical instruments and to the design of auditoriums and concert halls. Three credits.

PS 77 The Science and Technology of War and Peace - The Way Things Work

Designed for the non-science major, this course includes critical discussion and descriptive exposition of the swords and plowshares dilemma, of the concept that science and technology have been used to build up - and tear down - civilization, and of the forces of civilization driving and being driven by the dual nature of our technological heritage. The course begins with the first lever and club and ends with laser surgery and Star-Wars lasers, taking a historical and a thematic approach where appropriate. The course describes, in the simplest terms, the way important real devices (television, telephones, lasers, gas turbines, thermonuclear weapons, etc.) work, examining their illustration of and limitations by scientific principles at a qualitative level. The course also considers the technical future from a past, present, and future perspective, asking: What can, could, didn't, might, and can we not do? The course illustrates the moral and ethical implications of science where appropriate. Knowledge of no more than high school algebra is required. Three credits.

PS 78 The Nature of the Universe

This course, intended for non-science majors, reviews the scientific field of cosmology, or the nature of the physical universe, from a historical perspective. Beginning with the ancients, the course traces the development of cosmological principles through the Greek and Egyptian era of Aristotle, C. Ptolemy, and others; the 16th and 17th centuries of Copernicus, Galileo, and Newton; and the cosmology of the 20th century based upon Einstein's theories of relativity coupled with several fundamental observations. This leads to an examination of the current model of the universe, which is based upon the Big Bang theory. Three credits.

PS 87 Fundamentals of Astronomy

This course introduces students who are not majoring in science to the principal areas, traditional and contemporary, of astronomy. Traditional topics include a historical background to astronomy, telescopes, the sun, the moon, the major and minor planets, comets, and meteors. After discussing these subjects in detail, the course covers areas appropriate to modern astronomy such as the composition and evolution of stars, star clusters, quasars, pulsars, black holes, and cosmological models. Three credits.

PS 89 Physics of Sport

This course introduces concepts from science, particularly physics, by using illustrations from a wide variety of sports. For example, it explains why a baseball curves, why gears work on a bike, the speeds obtainable by a windsurfer or skier or tennis ball or arrow, how scuba divers survive, and a wide variety of other sports phenomena from football, golf, skiing, climbing, sailing, skating, baseball, scuba, fishing, sky-diving and so forth. The association of sports with motion, forces, and energy is explained by scientific reasoning and analysis. The course includes a small laboratory/experiential component that illustrates the scientific method, where various examples of sports are made quantitative, using readily available equipment. Three credits.

PS 93 Energy and Environment

This course introduces students not majoring in the natural sciences to topics relating to work, energy, and power, and explores many of the environmental consequences resulting from our use of energy. The course examines the finite nature of fossil fuels as well as many alternative energy sources including solar energy; wind, tidal, and geothermal energy; nuclear fission; and nuclear fusion. Students use arithmetic and simple algebra. Three credits.

PS 204 Modern Experimental Methods Lab

PS 204 offers lab experience in modern experimental methods and techniques. It involves lab investigation of fundamental concepts in modern physics including atomic, nuclear, solid-state, X-ray, acoustic, superconductivity, and quantum physics. Lab procedures emphasize hands-on work with basic experimental equipment such as vacuum systems, power supplies, electronics and instrumentation, detectors, diagnostic techniques, computer interfaces, data acquisition and control, hardware and software, etc. This lab course gives students maximum opportunity to work on their own with minimum supervision. Two credits.

PS 206 Modern Optics Lab

In this lab course, student experiments include measurement of the photoelectric effect, electro-optic phenomena, diffraction phenomena, spectroscopy, interferometry, interference effects, and optical heterodyning. Students may - and are encouraged to - develop relevant experiments. The course requires comprehensive lab reports. (Prerequisite: PS 222 or permission of instructor) One credit.

PS 211 Digital Electronics and Microprocessors

This lecture and lab course trains students in the practical aspects of digital electronics, beginning with simple digital circuits and advancing to the design and development of microprocessor circuits. Topics include number systems (decimal, binary, octal, hexadecimal, BCD); Boolean algebra; integrated circuits versus discrete components; logic gates; AND/OR/NAND/NOR/XOR circuits; flip-flops; multiplexers and decoders; counters; registers; memory devices; arithmetic and logic units; programmable logic devices; and analog/digital and digital/analog conversion techniques. (Prerequisites: PS 15-16) Three credits.

PS 211L Laboratory for Digital Electronics and Microprocessors

Students learn the use of basic laboratory test equipment such as the digital volt-ohm-amp meter, function generator, and oscilloscope. Breadboard techniques are utilized to assemble and test various digital circuits. Simulation software is introduced. (Co-requisite: PS 211) One credit.

PS 212 Circuit Analysis and Analog Systems

Cross-listed under engineering as EE 213, this lecture and lab course introduces students to the theory and practice of basic electronics and linear/analog circuitry. Topics include Kirchhoff's laws and applications; resistor circuits; concepts of capacitive and inductive reactance; impedance calculation using vector and complex notation; DC, AC, and transient circuit behavior; operation of basic solid state devices (diodes, junction transistors, FETs, SCRs); operational amplifiers; active and passive filters; feedback techniques; and frequency dependent effects. The basic laws and theorems of circuit analysis are introduced. (Prerequisites: PS 15-16) Three credits.

PS 212L Laboratory for Circuit Analysis and Analog Systems

Students learn the use of basic laboratory test equipment such as the digital volt-ohm-amp meter, function generator, oscilloscope, and frequency counter. Breadboarding techniques are utilized to assemble and test various linear/analog circuits. Simulation software is introduced. (Co-requisite: PS 212) One credit.

PS 215 Computational Physics

In this course students will learn numerical methods to solve scientific problems and to integrate the use of the computer into their research. The course will cover numerical methods to solve integrals, differential equations, partial differential equations, systems of linear equations, and to model random processes. Problems that will be solved in this class include: Laplace equation, chaotic pendulum, Schrodinger's equation, and magnetic and electric field calculations. The programming languages that will be used in this course are high level languages, such as C and C++, whose basic syntax will be taught in class. (Prerequisites: PS 15-16 or equivalent) Three credits.

PS 220 Pollution in the Environment

This lecture/lab course introduces students to a range of physical and chemical techniques used to monitor and assess the sources, level, and flux of pollutants in the environment. The course considers the specific pollution sources, pathways by which pollutants travel through the ecosystem, the deleterious effects of pollution, and approaches to pollution prevention and remediation. The lectures present a review of the relevant physical and chemical processes whereby pollutants enter and affect the ecosystem. The lab component gives students hands-on experience in environmental sample collection, analysis, and data interpretation, and features the use of sophisticated analytical instrumentation. (Prerequisites: CH 11-12) Four credits.

PS 222 Modern Optics

Starting with a review of electromagnetic wave theory and the differential wave equation, this course covers the propagation of light from a scattering and an electromagnetic wave phenomena point of view. The course investigates superposition, polarization, interference, and diffraction in detail and discusses the photon theory of light along with the photoelectric effect. The course covers the basic theory of coherence with its contemporary application to lasers and additional selected topics in applied optical devices. It stresses the application of theory to devices and observations, and requires completion of the complementary lab course, PS 203. (Prerequisite: PS 271) Three credits.

PS 226 Classical Mechanics

The formulation of classical mechanics represents a major milestone in our intellectual and technological history as the first mathematical abstraction of physical theory from empirical observations. This achievement is rightly accorded to Isaac Newton, who first translated the interpretation of various physical observations into a compact mathematical theory. More than three centuries of experience indicate that mechanical behavior in the everyday domain can be understood from Newton's theories. Topics in this course include elementary dynamics in one and two dimensions, gravitational forces and potentials, free and forced harmonic oscillations, central fields and the motions of planets and satellites, Lagrange's and Hamilton's equations, small oscillations, and normal mode analysis. (Prerequisites: PS 15-16) Three credits.

PS 241 Thermal and Statistical Physics

Thermodynamics, viewed primarily as the science that deals with energy transformations and the relationships between properties of systems, is a fairly modern science. As its name implies, thermodynamics deals with heat and power; originally, this now broad subject dealt almost exclusively with heat engines. This course begins with a review of the three fundamental laws of thermodynamics. Additional topics include the kinetic theory of gases and modern statistical mechanics. (Prerequisite: PS 285) Three credits.

PS 271 Electricity and Magnetism I

This lecture course covers the foundations of electric and magnetic phenomena. Topics include electrostatics and the concepts of the electric field, flux, and potential; Coulomb's law and Gauss's law and their applications; vector and scalar fields and vector operators; electric energy of systems of charges; dipole fields and Laplace's equation; moving charges and currents; Ampere's law; and magnetic fields and forces. (Prerequisites: PS 15-16 and MA 125, MA 126, MA 227, MA 228) Three credits.

PS 285 Modern Physics

This course introduces modern physics, i.e., the physics of the 20th century. The basic ideas that led to the formulation of quantum mechanics together with Einstein's theories of relativity provided a means to explore many new aspects of the physical world. This course examines the discovery of quanta of energy; Einstein's Special Theory of Relativity; the Bohr model of the atom; wave mechanics, angular momentum, and spin; various aspects of quantum mechanics that explain much of the subatomic world; and aspects of atomic and nuclear physics including solid-state physics and superconductivity. The course also examines several of the major experimental observations that support and confirm these new theories. (Prerequisites: PS 15-16) Three credits.

PS 371 Electricity and Magnetism II

This lecture course continues PS 271, covering additional topics in electric and magnetic phenomena. Topics include Faraday's laws and induced electromotive force; electric and magnetic fields in matter; methods of solving boundary value problems; Maxwell's equations in integral and differential form; electromagnetic radiation and wave propagation; and Einstein's Special Theory of Relativity for electrodynamics. (Prerequisite: PS 271) Three credits.

PS 386 Quantum Mechanics

This course introduces students to the physical concepts and mathematical formulations of nonrelativistic quantum mechanics. Topics include the Schrodinger wave equation, Fourier techniques and expectation values, operator formalism, angular momentum, central forces, matrix representations, and approximation methods. (Prerequisites: PS 285, PS 226, MA 228, MA 321, MA 332) Four credits.

PS 388 Elementary Particles and Nuclear Physics

This course begins with a review of elementary particles, their properties and classification, and their nuclear and electromagnetic interactions. It proceeds with the study of bound nuclear systems, conditions for nuclear stability, and radioactive decay modes. The course concludes with an examination of particle accelerators and other nuclear experimental facilities. (Prerequisite: PS 386) Three credits.

PS 390 Special Topics

This course covers the following content: condensed matter physics, numerical analysis and computational physics, and wave phenomena and quantum phenomena. Condensed matter topics include mechanical, thermal, and electric properties of matter; magnetism; superconductivity; and magnetic resonance. Topics in numerical analysis and computational physics include solutions of differential equations, boundary value and eigenvalue problems, special functions and Gaussian quadrature, and matrix operations. Topics in wave phenomena include electric and mechanical oscillators, coupled oscillators, transverse and longitudinal waves, waves on transmission lines, and electromagnetic waves. Quantum phenomena include advanced topics in quantum mechanics with applications in the structure of nuclei, atoms, molecules, metals, crystal lattices, semiconductors, and superconductors. (Prerequisites: PS 15-16, PS 285) Three credits.

PS 391-392 Theoretical/Experimental Independent Study

This course provides opportunities for intensive investigation - experimental or theoretical - of selected topics at an advanced level under the guidance of a faculty member. Participation in this course is required of all seniors. Credit by arrangement.

PS 399 Independent Study

This independent study, primarily for scientists and engineers, focuses on developing student computer skills. Students select from study projects such as introduction to computer-aided design, Web page design, and computer programming for technical problem solving. No prerequisites. One or two credits.

Department of Politics

Faculty

Professors

Cassidy
Leatherman
Patton

Associate Professors

Boryczka, chair
Downie
Greenberg

Assistant Professors

Alphonso
Garcia Iommi

The Department of Politics offers a balanced and diversified curriculum that covers the major subfields of this discipline. While very much aware of the perennial questions of government and society that puzzled political philosophers such as Aristotle and Plato, the department is concerned that its students be well versed in the affairs and contending theories of the contemporary world. It is also committed to the development of rigorous analytical skills, the arts of communication (spoken and written), and experiential learning. Professors are closely involved with the programs in International Studies, Asian Studies, Peace and Justice Studies, Latin American and Caribbean Studies, and Irish Studies. Thus, while it is designed to provide a broad liberal education, the politics curriculum is also appropriate for many career orientations, especially law, government, the media, teaching, and business.

Requirements

Major in Politics

For a 30-credit major in politics, students:

- complete PO 11 Introduction to American Politics;
- complete PO 12 Introduction to Comparative Politics;
- complete PO 14 Introduction to Political Theory; and
- complete seven upper-division (100-level or greater) politics courses. Majors complete one upper-division course in each of the following areas: political theory, comparative politics, international relations, and American politics.

Minor in Politics

For an 18-credit minor in politics, students:

- complete PO 11 Introduction to American Politics;
- complete PO 12 Introduction to Comparative Politics;
- complete PO 14 Introduction to Political Theory; and
- complete three upper-division (100-level or greater) politics courses taken in any politics subfield or as internships or independent study offered by the department.

Course Descriptions

PO 11 Introduction to American Politics

Students examine the American political system and the American political culture; consider the major political institutions in relation to policy perspectives; examine the ability of the political system to deal with societal problems; and analyze proposals for reform of the political system. Three credits.

PO 12 Introduction to Comparative Politics

This course introduces students to the concepts and theories used to understand the structures and processes of diverse political systems. Comparing similarities and differences between different political systems will enable students to identify interesting questions about politics in specific countries, and to make systematic comparisons across countries. *This course meets the world diversity requirement.* Three credits.

PO 14 Introduction to Political Theory

This course introduces students to the field of Western political theory. It analyzes the liberal political theories of Thomas Hobbes, Jean-Jacques Rousseau, John Locke, J.S. Mill, and Karl Marx, and compares and contrasts them to a variety of communitarian, socialist, and anarchist political theories. Three credits.

Political Theory Courses

PO 112 Critiques in Contemporary Political Thought

This course focuses on how the modern tradition shapes contemporary political thought in the West. It carefully examines the work of key thinkers such as Karl Marx, Sigmund Freud, Friederich Nietzsche, Hannah Arendt, Franz Fanon, and Michel Foucault. Each of these theorists presents a critical assessment of the nature and value of modern society's cherished ideals of social and economic progress, secularization, and scientific reason, and individual autonomy and liberty. This course explores and evaluates these controversial critiques of life in the modern age. Three credits.

PO 116 Utopian Politics

This course examines the nature and function of utopian thinking and utopian communities. What is the value of utopian reflection? What forms of critical thinking and imaginative speculation does it enable? What are the limits to or dangers of utopian thought and practice? What kinds of challenges do utopian communities face? This course explores and critically assesses utopian, and dystopian themes from utopian fiction, political theory, science fiction, and popular culture. The course involves students in building model utopias that resolve major world problems. Three credits.

PO 118 American Political Thought

This course considers the philosophical roots of American political thought and the influence of the American revolutionaries, constitution-makers, Federalists, Jeffersonians, Jacksonians, Alexis de Tocqueville, examiners of the welfare state, pragmatists, and new frontiersmen on the contemporary American mind and institutions. The course also covers challenges and reform of the American political system within the scope of political science through an application of the concepts of human nature, idealism, constitutional power, and nationalism. Three credits.

PO 119 Sex, Sexuality and Gender

This course focuses on how men and women ally together and separately to alter the landscape of sex, sexuality, and gender in the U.S. as part of a global wave of political change. The course examines how race, class, religion, age, disability, and other identity variables intersect with male and female, masculine and feminine, and the full range of sexualities in order to understand the theories and practices related to identity that shape twenty-first century politics. *This course meets the U.S. diversity requirement.* Three credits.

PO 123 Modern Political Ideologies

This course primarily examines the political belief systems in the United States including conservatism, liberalism, democratic socialism, and the idea of industrial policy. It analyzes these "isms" with reference to democracy's ability to deal with the contemporary problems of American society. It also explores Marxism in terms of the basic political and economic ideas of Marx and Engels as well as the modifications made in their system by Lenin; discusses the basic concepts of racism; and briefly analyzes the meaning of totalitarianism. Three credits.

PO 153 The Politics of Race, Class, and Gender

This course investigates how race, class, and gender function in American political culture. Students explore how the theoretical ideas of central thinkers such as Thomas Jefferson, Martin Luther King Jr., and Susan B. Anthony shape the political practices of the people who express themselves in songs, speeches, art, and music. The focus on race, class, and gender enables students to engage with historically challenging questions about equality, freedom, individualism, republicanism, liberalism, and American exceptionalism from alternative perspectives. The course does so by assessing whether or not the contemporary Hip Hop movement can overcome the barriers of race, class, and gender. *This course meets the U. S. diversity requirement.* Three credits.

PO 220 Seminar on Feminist Theory

This course explores advanced topics in feminist theory, examining a number of trends in contemporary feminist theory. Topics include conceptions of the female body in Western culture, feminist theories of the family, global feminisms, theories of feminist subjectivity and gender performativity, and the intersections among gender, race, class, and sexuality. *This course meets the U.S. diversity requirement.* Three credits.

International Relations Courses

PO 130/IL 51 International Relations: Theories and Challenges

This course introduces International Relations (IR) theories to students, providing concepts, frameworks and approaches that will help them make sense of global politics historically and today in a systematic and critical manner. The goal of the course is to familiarize students with these tools and to help them use them to understand and address challenges at a global scale, particularly different manifestations of violence, development and social injustice, including from war to economic, social, gendered, and political marginalization. Three credits.

PO 131 International Environmental Policy

This course examines important current issues in international environmental policy. The course consists of four interrelated sections designed to provide the factual knowledge and conceptual frameworks required for working in this field: The process and difficulty of creating effective International environmental policy; history, trends and actors; key current issues including climate change, biodiversity, toxic pollution, trade and the environment, sustainable development, and environment and security, among others; and, factors that assist effective policy. Three credits.

PO 132 Climate Change: Politics and Policy

This course provides an important opportunity to examine key political, scientific and economic issues surrounding global climate change. Topics include: the causes and impacts of climate change; policy-making under uncertainty; climate policy at the global, national, state and local levels; technology and energy options; the economics of climate change; ethical issues; and evaluating options for individual action. Students will gain the ability to understand and analyze climate policy options at the global, national and local levels. Three credits.

PO 133 United States Foreign Policy

This course reviews U.S. involvement in world affairs from the 1930s to the present, with special attention to the rigors and logic of the Cold War. Students discuss constitutional and other factors in the making of foreign policy and debate major contemporary policies and commitments. Three credits.

PO 134 Globalization: Who Rules the World?

In a globalizing world, understanding the link between wealth and power is increasingly important. This course seeks to explore the international and global context of the intersection of politics and the economy today. It examines the impact of globalization on states, markets, societies, businesses, and people by posing such questions as "in whose interest?" and "who benefits?" Three credits.

PO 135 Global Governance: International Law and Organizations

How can states, organizations and individuals, in the absence of a world government that creates and enforces rules, coordinate and cooperate over the wide range of common problems the global community faces today? They develop global governance through international law and international organizations. This course is an introduction to public international law and international organizations, particularly the United Nations. The course addresses important questions about global governance, such as why states create and obey international law, how does international law work and how it relates to national legal systems, and how it is evolving to affect and involve an increasing number of actors and issues in international affairs. Three credits.

PO 136 /IL 151 Gender, War and Peace

This course examines the complexities of the gendered impact of war on men, women, families and children. Students learn about the gendered dimensions of war institutions, social structures and narratives of war. They explore the topic especially from the voices and perspectives of women in war zones and post-conflict settings around the world, including historical memories. Students learn how the forces of globalization and existing conditions of structural violence make women extremely vulnerable as societies slide toward war. Three credits.

PO 137 Threats to Global Security in the 21st Century

This course is designed as an introduction to global security. It considers, traditional and new security topics, from interstate and civil wars to environmental degradation and famines. We will look at these topics through the lenses of major paradigms in International Relations (IR) theory, such as Realism, Liberalism and Constructivism and also from the perspective of Feminist, Critical and Peace studies' theories. In addition to learning to think about global security in a systematic and critical way, in this this course we will consider the political, ethical and social dimensions of threats to global security today. Three credits.

Comparative Politics Courses

PO 139 European Politics

This analysis of political institutions and dynamics of Great Britain, France, Germany, and Italy emphasizes the relationship between the political culture and the political system and analyzes alternate methods of dealing with societal problems. Formerly listed as PO 140. Three credits.

PO 140 Islam and Muslim Politics

Islam is most often treated as a monolithic force when in fact the relationship between Islam, politics, and society is varied and dynamic. The aim of this course is to introduce students to the pluralism of Islam-influenced practices (such as in politics, education, charitable aid, and business) drawing on examples from Turkey, Indonesia, Central Asia and China. Three credits.

PO 141 African Politics

This course examines political patterns in Africa with an emphasis on the relationships between politics and culture, and politics and economy. Themes and concepts, not country studies, structure the course, which extracts patterns that are universal or typical in sub-Saharan Africa, examines the colonial legacy on which contemporary states build, and considers the political problematic that the colonial experience imparts with respect to cultural issues of identity, tribalism, and ethnicity in Africa. The course also examines the role of force and violence in consolidating political rule, the economic constraints that fetter Africa, and considers prospects for Africa's political. This course meets the world diversity requirement. Three credits.

PO 142 Latin American Politics

Building a strong political system seems impossible in a setting of economic underdevelopment and socio-cultural disunity. This course studies the political systems of selected countries of mainland Latin America such as Mexico, Guatemala, Nicaragua, Venezuela, Colombia, Peru, Chile, Argentina, and Brazil. In particular, it examines the revolutionary method of change; reviews the policy dilemmas of land reform, industrialization, and control of natural resources; and reviews U.S. foreign policy toward the area - past and present. Students complete research projects. This course meets the world diversity requirement. Three credits.

PO 143 Caribbean Politics

Racism and ethnic conflict, colonialism and neocolonialism, grating poverty and bustling tourism all have their impact on the politics of these struggling countries. This course examines migration across the first world's borders in countries that include Cuba, Puerto Rico, the Dominican Republic, Haiti, Jamaica, Trinidad, Guyana, and Suriname. Students complete a research project. This course meets the world diversity requirement. Three credits.

PO 144 Middle East Politics

This course examines the modern Middle East by familiarizing students with the most significant contemporary problems and controversies in the region. Themes and concepts, not individual country studies, structure the course. Some of the topics covered are youth, war, revolution, oil, political Islam, economic reform, and the Arab spring. *This course meets the world diversity requirement.* Three credits.

PO 145 Asian Politics

This course examines the domestic politics of Asian countries. Asia is a vibrant region politically and economically, and is very important to the United States for international security and economic stability. Given its importance, this course provides broad and essential knowledge about Asian nations. The course begins with historical background of various countries in Asia, and then examines politics in selected Asian countries. Country studies are intended to introduce major issues in comparative politics such as democracy, economic development, ideology and political conflict. This course meets the world diversity requirement. Three credits.

PO 147 Northern Ireland: The Politics of War and Peace

This course focuses on "the Troubles" in Northern Ireland from 1969 to the present beginning with historical background that emphasizes England's role from the 17th century through the present. It examines the 20th century conflict primarily as a national liberation struggle against a sectarian regime in the North supported by England. The course follows a chronological format starting with the civil rights marches in the late 1960's, the state repression that followed and subsequent community responses including the hunger strikes and electoral campaigns. It concludes with the peace process and grassroots efforts by former paramilitaries from both Catholic and Protestant communities to work together on issues of common concern. Three credits.

PO 148 Political Violence

This course offers a comparative study of political violence including civil war, terrorism, and separatist movements. We will examine a variety of theoretical and empirical approaches to violence. The course is designed to introduce students to core debates as well as cutting edge research on violence. Students will also learn about political violence across the globe through single country studies. Three credits.

PO 149 Third World: Common Fate? Common Bond?

This course introduces a comparative approach to studying the forces affecting development in the Third World. Examples are selectively drawn from Asia, Africa, Latin America, and the Middle East. It examines the roots of wealth and poverty, obstacles to development, responses to globalization, and current debates over the development prospects of the Third World. This course meets the world diversity requirement. Three credits.

PO 249 Seminar on Russia

This survey of Russian political, economic, and social developments under Communism sets the scene with a review of conditions that preceded the Revolution. The course then examines changes wrought by the Revolution and some of their unanticipated consequences, giving special attention to the dilemmas in Mikhail Gorbachev's and Boris Yeltsin's efforts to restructure and open the society. The course reviews United States/ Soviet relations. This course meets the world diversity requirement. (Prerequisite: permission of the instructor) Three credits.

PO 344 Seminar on Middle East Politics

The affairs of the Middle East continue to engage a great deal of international attention. This course offers the opportunity to examine a significant problem or issue concerning politics in the MENA (Middle East and North Africa) region conducted in a seminar format. In various semesters the seminar may be taught with a different focus. (Prerequisite: PO 144 or permission of the professor) Three credits.

American Politics Courses

PO 115 Introduction to the Study of Peace and Justice

This course introduces students to the concepts of peace and justice, the connections between them, and the relationship of these concepts to the idea of faith. The course focuses on case studies beginning with an analysis of the crisis of America's cities and finds the causes in de-industrialization and its resulting poverty. In both cases, the course views poverty as the effect of unjust economic and social structures including exaggerated military budgets at home and the militarization of developing countries. Examining these fundamental problems in peace and justice, according to the principles of Marxism, liberalism, and Catholicism, provides a theoretical basis for the study. Each of these traditions has its own perspective for understanding these problems and for responding to them. In this way the course provides an awareness of the major problems in peace and justice as well as an understanding of the different ways to think about them. Three credits.

PO 150 Urban Politics

This course examines structures and processes of urban politics and considers the major participants and policy areas of urban political processes. It sets the evolution of urban areas in historical perspective, discusses major contemporary problems, and analyzes alternative solutions. Three credits.

PO 155 Public Administration

The course focuses on the role of the bureaucracy within the political process, examining the problems of efficiency and accountability, and studying the classic models of bureaucratic organization and function in juxtaposition to the reality of bureaucratic operation. It analyzes proposed reforms to determine the viability of change. Three credits.

PO 161 The American Presidency

The course will examine the expansion of presidential powers by 20th-21st century modern presidents, focusing on the constitutional and political development in the President's role as chief executive, legislative leader, and administrative head of state. It will also explore and seek explanations for differences and patterns among presidents in their foreign & domestic policy success, evaluating changes in the recruitment process (primaries, conventions and elections), issues of psychology, race, religion, economic forces, political parties, 'political time', and media. Three credits.

PO 162 United States Congress

This course firstly examines the development of rules, procedures, and structures of Congress as the foremost institution of representation within American democracy, exploring its place in contemporary American politics and its often-contentious relationship with the other branches of national government, the Presidency and Courts. It will also introduce some primary theoretical approaches to the study of Congress as a deliberative body designed to produce national policy outcomes. Finally, it will develop students' understanding of individual members of Congress - their relationship to constituents, their differing styles of representation, and the effects of race, gender, ideology, and money on their legislative work. Three credits.

PO 163 Supreme Court I

This examination of the politics of the Supreme Court analyzes the relationship between the Court and the remainder of the political system; examines the Court's treatment of government power including commerce clause, taxing power, and relations between the branches; and emphasizes the political consequences of Court decisions. Three credits.

PO 164 Supreme Court II

This examination of the individual and the Court pays direct attention to Supreme Court decisions regarding civil liberties, including freedoms of speech, press, religion, and assembly. It also examines the rights of accused persons and the 14th amendment equal protection, emphasizing the political implications of these decisions as well as the political environment in which the Court functions. Three credits.

PO 165 Political Parties, Interest Groups, and Public Opinion

This course examines various linkage models that describe representation of citizens by leaders. Moreover, it examines political parties, interest groups, and public opinion in terms of their contributions to popular control of American politics. What mechanisms do citizens have to gain compliance for their policy preferences? How responsive are decision makers in the American system to citizens' demands? The course considers these and other questions. This course meets the U.S. diversity requirement. Three credits.

PO 166 American Public Policy

This course examines the policy process in the United States by assessing a variety of contemporary policy issues. Students investigate different policy domains to uncover the politics and societal myths affecting different stages of the complicated policy process, paying special attention to people and institutions that formally and informally influence public policy in the United States, including media, elected officials, bureaucrats, consumers, private citizens, workers, political activists, corporations, interest groups, lobbyists, and political parties. Three credits.

PO 167 Media and Politics

This course examines the impact of the media on the American political system and, conversely, how government attempts to influence the media for its purposes, and implications of the electronic media for a democratic and informed society. The course pays close attention to the media's impact on national elections and analyzes the media as an agent of political socialization. Three credits.

PO 169 US Environmental Politics and Policy

This course introduces students to the processes, actors, casual factors and theoretical approaches central to the creation and implementation of US environmental policy. The first section examines the history of US environmental politics, the policy process, and prominent theories that seek to explain that process. The second examines the role of key institutions, including the President, Congress, courts, federal agencies, environmental groups and corporations. The third section examines key current issues, including risk assessments, economic tools, air and water pollution, toxic chemicals, public lands endangered species, water shortages, and climate change. Three credits.

PO 170 Battle over Family Values in American Politics

Contemporary American politics is marked by numerous debates about the family in American society. Issues of gay marriage, abortion, abstinence/pre-marital sex, shifting gender roles within the family, and new parenting and reproductive methods are some of the hotly debated policy issues, illustrating the political struggle to define the soul of America and the role of the family within. This course explores such contemporary political debates over the family, their policy implications and significance to current elections, also examining the historical context and previous ideological battles that characterize the tumultuous relationship between the family and the American state. Seminar format. Three credits.

Internships, Independent Study Courses, and Special Topics**PO 190 Special Topics in Politics**

This course offers a focused examination of a significant political issue or topic chosen from the areas of American Politics and Public Policy, Political Theory, Comparative Politics, and International Relations. Content will vary in successive offerings of this course. May be repeated for credit when topic varies. (Prerequisite: six hours of politics credits or permission of instructor) Three credits.

PO 296 State Legislature Internship

Politics majors participate in the Connecticut General Assembly Legislative Internship Program, where students become acquainted with the legislative process by serving as aides to a legislator. Students complete a required research paper. (Prerequisites: 3.0 GPA, completion of PO 11 and two other politics courses, and departmental approval) Six credits.

PO 297 Washington Semester Internship

Politics majors work full-time as interns in a variety of public and private sector positions in the nation's capital, giving them the opportunity to experience governmental problems firsthand and apply what they have learned. Students earn nine credits for working as an intern, three for a course taken in Washington, D.C., and three credits for a major research paper. (Prerequisites: 3.0 GPA, completion of PO 11 and two additional politics courses, plus departmental approval) 15 credits.

PO 298 Politics Internship

Politics majors gain firsthand experience working off campus in fields related to their major. Typically, an internship requires 10 to 12 hours per week on site. The internship requires a journal and a term paper. An on-site supervisor and a politics professor evaluate student work. (Prerequisites: 3.0 GPA, completion of three politics courses, plus departmental approval) Three credits.

PO 390 Politics Seminar

This course offers an in-depth investigation of a significant political issue or topic and is conducted in a seminar format and contains a significant research component. The course is limited to 15 students. Open only to juniors and seniors by permission of the instructor. Three credits.

PO 398 Independent Study/Research

Upon request and by agreement with an individual professor in the department, a politics major may conduct a one-semester independent study on a defined research topic or field of study. (Prerequisites: 3.0 GPA, completion of PO 11, two additional politics courses, and departmental approval) Three credits.

Professional Studies

The Professional Studies program offers both traditional and online courses for students looking for flexibility and convenience from a comprehensive university. Advisor-guided emphasis on courses in particular fields allows students to design their programs to meet professional or personal goals for the degree. A student may earn a Bachelor of Arts by emphasizing courses from the humanities and/or social and behavioral sciences, or a Bachelor of Science by emphasizing courses from mathematics and science and/or professional programs.

This degree is designed for:

- Adults who are returning to college to finish what they started
- Community college students seeking a bachelor's degree
- Working students who are looking to advance their career with a respected degree from an accredited university
- Students who need to complete their degree to advance to a graduate program

The program facilitates individualized educational plans to help students achieve their goals. Advisors work with students to help them map out a baccalaureate curriculum. Previous experience is evaluated: up to 60 credits may be transferred in from a combination of accredited colleges and universities coursework as well as CLEP exams and/or portfolio credits for life/work experience. Professional Studies offers classes in online formats as well as accelerated and traditional programs.

College Equivalency Exams

Credit may be granted for specific college-level learning gained through self-education or non-collegiate-sponsored instruction. Fairfield University is a participating institution in accepting approved CLEP (College Level Examination Program) examinations for credit. This standardized examination program is designed to let students demonstrate proficiency in various college-level subjects. An advisor should be consulted about applicable examinations prior to taking any CLEP exams.

Portfolio Credit for Life Experience Learning

Matriculated students may choose the portfolio assessment process as a means of receiving credit for noncollegiate sponsored learning or life experience where there are no CLEP examination. An evaluation process of the documented learning is necessary. Portfolios must be submitted to the director's office a minimum of one semester prior to the anticipated graduation date. Contact the Professional Studies director for complete information.

Degree Requirements

Complete a minimum total of 120 credits with a GPA of 2.0 or better. At least 60 of those credits must be taken at Fairfield University, including:

- Meeting the Professional Studies requirements of the University core curriculum (see below)
- Completing GS 399 Senior Project Capstone
- Completing nine upper-level courses in at least four subjects from two of the areas below to concentrate your studies. No more than four courses can be taken in any one subject.

Areas and Subjects

The Humanities : Applied Ethics, Classics, English, History, Modern Languages, Philosophy, Religious Studies, Visual and Performing Arts

Social and Behavioral Sciences : Anthropology, Economics, Politics, Sociology, Communication, and International Studies

Mathematics and Science : Biology, Chemistry, Mathematics, Physics, Psychology

Professional Programs : Accounting, Information Systems, Engineering, Finance, Management, Marketing, Nursing

Professional Studies Requirements of the University Core Curriculum

Humanities (36 credits) - Twelve courses as follows:

English - EN 11 and EN 12

History - Two courses (one must be HI 10)

Philosophy - One course

Religious Studies - One course

Philosophy/Religious Studies/Applied Ethics - One additional course in any of those three areas

Visual and Performing Arts - Two courses - one may be a studio arts course

Humanities - Three courses

Social Sciences (12 credits) - Four courses, selected from at least two of these areas:

- Anthropology
- Communication (CO 100 or CO 130)
- Economics
- Politics
- Psychology
- Sociology

Natural Sciences and Mathematics (12 credits) - Four courses, including at least one science and one mathematics course, from:

- Biology
- Chemistry
- Physics
- Mathematics

Diversity Requirement - All students must complete one U.S. and one World Diversity course selected from the published list on pages 51-52.

Course Descriptions

GS 399 Senior Project Capstone

This required course for all students earning a B.A. or B.S. degree in Professional Studies is typically taken during the final semester. The course synthesizes and integrates students' multidisciplinary studies. Students complete a project or thesis under the direction of a faculty member after first discussing the proposed project with an academic advisor and the faculty member. The course requires a written paper reflecting the various disciplines studied. Three credits.

Department of Psychology

Faculty

Professors

Braginsky
Henkel
Primavera, chair
Salafia

Associate Professors

Harding
McCarthy

Assistant Professors

Andreychik
McClure
Rakowitz

The Department of Psychology introduces students to the content and methods of the science of psychology. Students survey the foundations of the field, learn about statistics and experimental design, and have an opportunity to pursue specific interests through upper-level seminars, applied internships, and supervised and independent research. The Department offers two degrees (a B.A. and a B.S. degree). Beyond the requirements of the major, students are also given opportunities to develop their interests through specific concentrations that prepare them for graduate work in areas of psychology, or prepare them for work in related fields such as medicine, law, education, social work, and public policy. Students with a degree in psychology are also particularly well suited for any entry-level position that demands a solid liberal arts education.

Description of concentrations:

Students who wish to develop their interests within a specific concentration have the opportunity to follow one of four distinct tracks: Mental Health Research and Practice; Behavioral/Cognitive Neuroscience; Social/Developmental Research and Policy; and General Psychology. These concentrations are described below:

- **Mental Health Research and Practice:** For psychology majors who wish to concentrate on the fields of clinical psychology, school psychology, counseling, I/O psychology, or clinical social work.
- **Social/Developmental Research and Policy:** For psychology majors who wish to concentrate on issues related to child and family studies, social cognitive studies, group processes, social justice, multiculturalism, and law.
- **Behavioral/Cognitive Neuroscience:** For psychology majors who wish to concentrate on the biological mechanisms of behavior and/or cognition.
- **General Psychology:** For students who wish to develop their own program by mixing concentrations or by taking advantage of Fairfield's liberal arts curriculum, filling electives with courses from other disciplines.

With guidance from their advisors, students develop a program of study relevant to their concentration from a list of courses both within and outside of the psychology department.

Requirements

B.A. With a Major in Psychology

The curriculum for a B.A. degree in psychology is:

Required Courses	Suggested Time
PY 101 General Psychology	Semester 1 or 2
PY 261 Biological Bases of Behavior	Semester 2 or 3
PY 211/212 Developmental Psychology for Majors with or without Lab	Semester 2 or 3
PY 201 Statistics for the Life Sciences	Semester 3 or 4
PY 202 Research Methods	Semester 4 or 5
One Senior seminar	Semester 7 or 8

Students must also complete four elective courses including at least one from each of the two groups listed below.

Group I

PY 221 Social Psychology

PY 231 Abnormal Psychology for Majors

PY 232 Theories of Personality

Group II

PY 251 Cognitive Psychology

PY 252 Learning and Applied Behavior Analysis

PY 262 Sensation and Perception

Permission of instructor is required prior to taking PY 391-392 and PY 395. Students are allowed a maximum of two applied internships and one teaching internship. Students may take PY 295 only once and PY 395 only once.

In their senior year, psychology majors may be required to participate in a departmental assessment, such as an exit questionnaire, interview, focus group, or Major Field Test in Psychology.

B.S. with a Major in Psychology

The psychology courses that constitute the curriculum for a B.S. degree in psychology are identical to those required for the B.A. degree. Additionally, the B.S. requires a year of math at least at the level of MA 121-122, along with the following courses:

Required Courses	Suggested Time
CH 111-112 General Inorganic Chemistry I and II	Year 1
BI 170-171 General Biology	Year 2
CH 211-212 Organic Chemistry I and II	Year 2
PS 15-16 General Physics I and II	Year 3

Minor in Psychology

For a 15-credit minor in psychology, students in other majors:

- complete PY 101 General Psychology
- complete four additional psychology courses (two of these courses also fulfill the behavioral and social science core requirement.)

Students contemplating a minor are urged to consult with a member of the psychology faculty regarding course choices.

Course Descriptions**PY 101 General Psychology**

This course introduces the science of mental processes and behavior by addressing a range of questions including: How is brain activity related to thought and behavior? What does it mean to learn and remember something? How do we see, hear, taste, and smell? How do we influence one another's attitudes and actions? What are the primary factors that shape a child's mental and emotional development? How and why do we differ from one another? What are the origins and most effective treatments of mental illness? Three credits.

PY 111 Developmental Psychology for Non-Majors

The course encompasses a developmental psychology approach to the growth of the individual from birth to old age, tracing motor, perceptual, language, cognitive, and emotional growth and emphasizing normal development. Psychology majors and students who have taken PY 211 or PY 212 may not take this course. Psychology majors are required to take PY 211 or 212. Designated sections meet the U.S. diversity requirement. Three credits.

PY 118 Psychology of Death and Dying

Recent biomedical research, psychological theory, and clinical experience provide the foundation for this life-cycle study of death, dying, and bereavement. Some topics include the funeral process, cultural differences, suicide, the hospice approach, end-of-life issues, and euthanasia. Three credits.

PY 121 Fundamentals of Social Psychology

This course surveys the major areas of concern in social psychology, emphasizing current issues and research in the fields of social influence and conformity, human aggression, prejudice, interpersonal attraction, propaganda, and persuasion. Psychology majors and students who have taken PY 221 may not take this course. Psychology majors can take PY 221. Three credits.

PY 122 Psychology and the Law

Implicit psychological assumptions about human behavior and how it should be controlled form the basis for the legal system, particularly our criminal justice system, from its code to its enforcement. This course examines those assumptions in light of current psycho-legal theory and research. It covers the treatment of traditional psychiatric populations (the mentally ill, mentally retarded, homeless) by the justice system in contrast to that received by normal people; clinical issues such as the insanity defense, predicting dangerousness, the validity of psychiatric examinations and lie detectors; and jury selection, eyewitness testimony, decision-making, sentencing, and parole. Three credits.

PY 124 Introduction to Industrial/Organizational Psychology

This course introduces the field, contributions, and methods of industrial/organizational psychology. It covers the history of this branch of applied psychology and the psychologist's role, along with other scientist-practitioners concerned with the world of work, in developing and maintaining human work performances and work environments. The course explores current concepts and methods in several specialties within this field: personnel, organizational behavior and development, counseling, labor relations, consumer, and engineering/ergonomic psychology. Topics include recruitment, selection, training and development, and appraisal of individuals and groups; development and change of organizational cultures; and relations between organizations and their stakeholders. The course emphasizes the unique contributions of psychological science to understanding human work skills, interests, attitudes, motivations, satisfactions and stresses; work careers, management, leadership, communication, group processes, and organization. Three credits.

PY 131 Abnormal Psychology for Non-Majors

This course introduces students to the field of abnormal behavior, presenting the classic behavior patterns in the classification system and discussing the possible causes and remediation of such. Psychology majors and students who have taken PY 231 may not take this course. Psychology majors can take PY 231. Three credits.

PY 201 Statistics for the Life Sciences

This introductory course in statistical methodology and analysis includes descriptive statistics such as frequency distributions, central tendency, variability, and correlation as well as an introduction to probability, sampling theory, and tests of significance including the t-test, chi-squared, ANOVA, and non-parametric statistics. This course is open to majors in the behavioral, biological, and physical sciences. The lab complements the course by giving students supervised computation and problem-solving exercises using calculators and computers. Note: this course does not fulfill any core requirements. Four credits.

PY 202 Research Methods in Psychology

Building on PY 201 Statistics, this course teaches students to read, evaluate, design, conduct, and report psychological research. The course emphasizes critical thinking and effective oral and written communication. Students work through several different research projects. (Prerequisites: PY 101, PY 201) Four credits.

PY 211 Developmental Psychology for Majors

Using a research-oriented approach, this course focuses on the principal themes, processes, and products of human development from conception through adolescence. Students who have taken PY 111 or PY 212 may not take this course. (Prerequisite: PY 101) Three credits.

PY 212 Developmental Psychology for Majors with Lab

Although the content of this course is identical to PY 211, it offers psychology majors the opportunity to participate in a laboratory experiential learning component in preschool Head Start classrooms. Specific hands-on assignments complement course material. Students who have taken PY 111 or PY 211 may not take this course. Designated sections meet the U.S. diversity requirement. (Prerequisite: PY 101) Four credits.

PY 221 Social Psychology

This course surveys the major areas of concern in social psychology, emphasizing current issues and research in the fields of social influence and conformity, human aggression, prejudice, interpersonal attraction, propaganda, and persuasion. Students who have taken PY 121 may not take this course. (Prerequisite: PY 101) Three credits.

PY 231 Abnormal Psychology for Majors

This advanced course in abnormal behavior offers an in-depth analysis of current research and theories of psychopathology. Building upon the student's knowledge of developmental psychology, the course examines the biological and psychological antecedents of abnormal behavior. The course emphasizes oral and written analysis. (Prerequisite: PY 101) Three credits.

PY 232 Theories of Personality

The advanced presentation, analysis, and evaluation of theories of personality from Freud through Skinner broadens student understanding of the normal human personality in terms of theoretical structure, function, and dynamics, while enriching theoretical and historical understanding of the topic. (Prerequisite: PY 101 and PY 111, PY 211, or PY 212) Three credits.

PY 234 Theories in Psychotherapy

This course explores similarities and differences across a wide range of psychotherapeutic endeavors by means of lectures, films, and tapes. The course covers traditional psychoanalytic techniques and more recent innovations. (Prerequisites: PY 101 and PY 231 or permission of instructor) Three credits.

PY 236 Human Neuropsychology

Human neuropsychology is a branch of psychology that focuses on functional structures and systems of the human brain and how they support various higher order psychological processes (e.g., learning, attention, executive functioning, higher-order thinking, memory, language, emotion, and motor skills). This course thus concentrates on the brain-behavior relationships beyond the cellular-molecular level, with an emphasis on typical life-span development and common neuropathological syndromes (e.g., strokes, dementia, and traumatic brain injury) in relation to functional structures and systems of the human brain. Assessment and treatment interventions of neuropsychological disorders are addressed within this context. (Prerequisites: PY 261 or permission of instructor) Three credits.

PY 238 Tests and Measurements

This course offers an introduction to the principles of psychological test construction, administration and interpretation, and reviews the roles that these tests have in a broad clinical assessment and research. Specific evaluation of test reliability and validity are applied to test construction and to various published tests of intelligence, achievement, personality, and neuropsychological functioning. (Prerequisite: PY 101, PY 201) Three credits.

PY 251 Cognitive Psychology

How can we study the mind? This course surveys topics in cognitive psychology, including attention, memory, thought, imagery, language, problem solving, and decision making. Through lectures, readings, demonstrations, and exercises, students learn about how we think and about scientific explorations of the mind. (Prerequisite: PY 101) Three credits.

PY 252 Learning and Applied Behavior Analysis (L&ABA)

L&ABA focuses on the environmental determinants of behavior and behavior change. The first two-thirds of the course highlight current concepts and research in Pavlovian and operant conditioning, reinforcement, discrimination, extinction, punishment, avoidance learning, etc. The remaining third of the course emphasizes applied behavior analysis (aka: behavior modification) that is, how these learning concepts and principles can be successfully applied to education, parenting, therapy, medicine, and everyday life. During this part, which is run seminar style, each student makes a PowerPoint presentation of one aspect of ABA, from methods to ethics. (Prerequisite: PY 101) Three credits.

PY 261 Biological Bases of Behavior

Understanding the brain is one of the last and most challenging frontiers of science. Our brain functioning determines what we see, hear, know, think, or feel. Starting with the molecular and cellular machinery of neurons and the anatomy of the nervous system, the course proceeds through the neural basis of sensation, perception, memory, emotion, language, sexual behavior, drug addiction, depression, schizophrenia, etc. The enormous strides made by neuroscience in the last several decades show every sign of continuing and increasing; this course provides the foundation upon which a thorough understanding of brain-behavior relationships can be built. Note: This course can be used by non-psychology majors to fulfill one of the core natural science requirements. (Prerequisite: PY101 or permission of instructor) Three credits.

PY 262 Sensation and Perception

How do we see, hear, touch, taste, and smell? What about individual differences? This course deals with basic sensory mechanisms and with perceptual processing. Students examine color, depth, pattern, and motion perception and complete an integrative final project. Students may do experiential learning to enrich their understanding of individual differences in sensation and perception. (Prerequisite: PY 101) Three credits.

PY 272 Hormones and Behavior

This upper level course in psychology will provide students with an overview of behavioral neuroscience, with an emphasis on behavioral endocrinology (hormones and behavior). Topics include the description of major classes of hormones, the techniques used in behavioral neuroscience, and the discussion of hormone-mediated behaviors including male and female reproductive behaviors, stress / fear, memory and cognition, parental behaviors, ingestive behaviors, and circadian rhythms. After weekly mini-review sessions of the relevant text, this course will emphasize primary research (journal) articles with student-led discussions. (Prerequisite: PY 261 or BI 171 and BI 172) Three credits

PY 274 Drugs and Behavior

This survey course discusses the psychopharmacological properties of the more significant drugs used for research and by society in general. Drug classes include alcohol and nicotine, depressants and stimulants, tranquilizers, opium derivatives, and hallucinogenic compounds. The course emphasizes drug action sites in the central nervous system as well as behavioral alteration in the controlled and uncontrolled environments. (Prerequisite: PY 261 or permission of instructor) Three credits.

PY 291 Internship in the Teaching of Psychology

This practicum experience, open to advanced psychology majors, affords students an opportunity to explore teaching psychology as a profession. Under the direct supervision of a faculty mentor, students engage the issues of curriculum development, methods of classroom instruction, selection and use of media resources, test construction, and strategies for the academic and practical motivation of students. Interns observe participating faculty engaged in the profession of teaching and share in some instructional activities (Prerequisite: permission of instructor) Three credits.

PY 295 Supervised Research

The course provides research training experience in a supervised setting in which students work closely with a faculty mentor on various research projects. Such work may include assisting in designing and running lab research, data analysis, field experience, and library research. This hands-on experience enhances students' understanding of issues in research design and analysis, and prepares them for more advanced research opportunities should they choose to pursue them (e.g., independent research). Student researchers are expected to spend a minimum of 10 hours per week in their faculty mentor's lab. (Prerequisites: PY 202 and permission of instructor) Three credits.

PY 301 Modern Psychology: History and Current Issues (Senior Seminar)

This seminar introduces students to the major historical perspectives in psychology; encourages critical thinking and the generation of creative ideas; and helps students engage in thoughtful questioning of the theory and knowledge base that constitutes the science of psychology. Open to senior psychology majors. Permission of the instructor is required for junior psychology majors. Three credits.

PY 322 Health Psychology Senior Seminar

This course provides an in-depth survey of the discipline of health psychology framed within the context of socio-cultural factors such as ethnicity, gender and socio-economic status. Among the topics covered: stress, coping behaviors, biomedical and biopsychosocial models of health and illness, health behaviors, patient-provider communication. The students explore new ways to integrate theory and research with the advances in the science and practice of health psychology, and present their work in a final independent project. Open to senior psychology majors. Permission of instructor is required for junior psychology majors. Three credits.

PY 331 Abnormal Child Psychology Senior Seminar

This course provides a survey of the theory and research in the field of clinical psychology related to children and adolescents. More specifically, the seminar explores: the diagnostic characteristics of the major types of child psychological disorders, the etiology of each disorder from the different theoretical perspectives, and effective approaches to treatment and prevention. Open to senior psychology majors. Permission of the instructor required for junior psychology majors and non-majors. (Prerequisites: PY 111, PY 211, or PY 212) Three credits.

PY 351 False Memories Senior Seminar

Can people repress memories for childhood trauma? How accurate are eyewitnesses at reporting what they saw? Although most of the time, our memories serve us quite well, many of the strategies and mechanisms that help us remember accurately can also lead to errors. This course examines various types of memory distortions and what they can tell us about the mechanisms of memory. Through readings and class discussions, we will explore research addressing confusions between real and imagined memories, the reliability of eyewitnesses recollections, children's suggestibility, as well as clinical issues such as repression and dissociation from a cognitive perspective. Open to senior psychology majors. Permission of instructor is required for junior psychology majors. Three credits.

PY 365 Neuroanatomy and Behavior

This hands-on laboratory course in behavioral neuroscience will introduce students to comparative neuroanatomy using rat, sheep, and human brain specimens. Students will participate in animal handling, brain sectioning, small animal surgeries, and drug administration, and will gain experience with rodents on a number of behavioral assays, including tests for spatial memory and reproductive behaviors. In small group exercises, students will become proficient in critiquing and presenting scientific literature, and will help in all stages of an experiment, from design to data collection to analysis and the writing up and presentation of results. In addition, students may work on a service-learning project with a community partner during the semester. (Prerequisite: PY 261 and permission of the instructor) Four credits.

PY 381 Special Topics in Psychology: Senior Seminar

In this seminar, students undertake an in-depth study of a current topic in psychology, using mostly primary sources. Coursework emphasizes discussion and writing. Open to junior and senior psychology majors or by permission of instructor. Three credits.

PY 391-392 Internship in Applied Psychology

Senior psychology majors gain practical, career-related experience in a variety of supervised field settings through the internship program. Student interns choose from a wide selection of placements in traditional psychology-related programs: mental health, social service, school psychology, early child and special education, probation, and hospital administration. Intern placements in related disciplines include human factors engineering, human resource development, advertising, and public relations. Internships emphasize the integration of learning, both cognitive and experiential. Interns may register for one or two semesters, depending on the availability of appropriate placement sites and qualified supervisors. Interns spend a minimum of 10 hours per week in on-site work and complete the required academic component specified by the faculty coordinator. (Prerequisites: permission of department's internship program director) Three credits.

PY 395 Independent Research

This course involves a limited number of upper-division students (usually seniors) in all aspects of an advanced research project. Students must obtain the consent of the professor with whom they will work prior to registering for this course. Frequently a research proposal is required prior to acceptance into this course; early planning is essential. (Prerequisites: PY 202 and permission of instructor) Four credits.

The Religious Studies curriculum presents a critical inquiry into the religious dimension of human experience. After an introduction to the nature of religion and the methods employed in its study, students can select from a variety of courses exploring specific topics such as sacred texts, issues in sexual ethics, questions of life and death, and the wide variety of devotions and practices that animate religious communities.

The study of religion allows for an informed appreciation of the motivations and values given expression in religious belief, and the way in which culture shapes, and is shaped by, that belief. Students may take courses offered by the Religious Studies Department as part of the required core curriculum, as electives, or as part of a major or minor program in religious studies under the direction of a departmental advisor.

Majors in Religious Studies are eligible for induction to Theta Alpha Kappa, the national honor society for religious studies and theology. In addition, each year the department honors the academic achievement of an outstanding senior with the Mary Irene Gallagher Theology Medal, Fairfield's oldest academic award.

Requirements

Students interested in a minor, a major, or a double major should contact the religious studies department chair.

Major in Religious Studies

For a 30-credit major in religious studies, students:

- complete RS 101 Exploring Religion,
 - complete no more than five courses at the intermediate (200) level,
 - complete no fewer than four courses at the advanced (300) level, including two semesters of RS 360.
-

In addition, in consultation with the major advisor, students should also

- ensure that the courses selected at the 200 and 300 level include courses that emphasize three of these five world religions - Judaism, Christianity, Islam, Hinduism and Buddhism - and
- ensure that at least one of the courses selected at the 200 or 300 level is a course on scripture.

Courses taken in fulfillment of the core requirement in Religious Studies are counted toward the major.

Minor in Religious Studies

For a 15-credit minor in religious studies, students:

- complete RS 101 Exploring Religion,
- complete no more than three courses at the intermediate (200) level,
- complete at least one course at the advanced (300) level.

Courses taken in fulfillment of the core requirement in Religious Studies are counted toward the minor.

Core Curriculum Options

Area III of the core curriculum, described on page 51 of this catalog, requires students to take a minimum of two religious studies courses. All students must take RS 101 Exploring Religion. Students may then select a 200-level course based on their interests, keeping in mind that it may not be a second section of RS 101. A third course in religious studies, at the 200 or 300 level, may also be chosen to complete the five-course requirement of Area III.

Course Descriptions

RS 101 Exploring Religion

This course invites students to explore the religious dimensions of human experience, emphasizing the themes of scripture, community and practice. In a critical appraisal of one or more of the great religious traditions of the world, students will analyze sacred texts in context, discover how social patterns shape religious communities, and survey a wide variety of religious devotions and practices, both personal and communal. Students in this course will learn to investigate the religious lives, beliefs, experiences and values of others, in their scope and diversity, respecting both the differences from, and the similarities to, their own. While several sections of RS 101 will offer a variety of lenses for such a critical understanding, all sections will inquire about the relationship between religion and culture, employing the tools of the humanities and the social sciences. Section subtitles and descriptions follow. Three credits.

- **Asian Religions.** This section examines the basic religious systems of India and China, including their fundamental differences, performative functions, and worldviews. The course evaluates Euro-American theories of religion in light of Asian religious expressions. This section of RS 101 meets the world diversity requirement.
- **Common Questions, Traditional Responses.** This section examines the major questions addressed by most world religions, with special emphasis on how they are answered in a specific major tradition. Topics include the nature of the sacred and its relationship to human persons; the problem of evil and innocent suffering; religion's call for social responsibility; and the nature and function of ritual.
- **Peoples of the Book, Sacred Texts and their Communities.** This section examines the relationship between sacred text and the historical communities of Judaism, Christianity and Islam. Focusing on shared narratives, such as Adam and Eve in the Garden, the course illustrates the different ways that texts are interpreted and the various roles that Scripture plays in these communities.
- **Religion and the Critical Mind.** This section examines some of the themes in the study of religion and offers a comparative analysis of the nature, function, and purpose of religion as found in a variety of models of religion. A wide variety of contemporary religious practices will serve as discussion points for scholarly analysis.
- **Religion in a Comparative Key.** This section examines different kinds of religious experience, doctrine, and practice through a close examination of two different religious traditions, engaging the traditions as these appear in a variety of cultural contexts.

RS 201 Hebrew Bible/Old Testament

This course will survey the texts that are normative for Judaism and Christianity today; the Hebrew Bible (TaNaK) and the Christian Old Testament. These texts will be studied according to a wide range of modern methods of biblical criticism which consider carefully their literary and historical aspects. Special effort will be made to situate these texts within their historical and cultural setting in the ancient near east. (Prerequisite: RS 10 or RS 101) Three credits.

RS 205 Women in the Bible

This course examines stories about women that appear in both Jewish and Christian Scriptures by applying various methodological approaches. Conventional methods of interpretation, namely literary and historical-critical, will be used and critiqued. While the focus will be on images of women in the Hebrew Bible/Old Testament (viz., the Jewish TaNaK and the Christian Scriptures), other non-canonical stories about women will also be considered. This course does not presume any previous knowledge of the biblical texts themselves or biblical methodology. (Prerequisite: RS 10 or RS 101) Three credits.

RS 207 Prophetic and Apocalyptic Voices

This course studies the major prophetic voices of the Hebrew and Christian scriptures, concentrating on each prophet's unique vision of God and of the requirements of justice. The course blends these themes with the later apocalyptic consciousness, which demands rectification of the wrongs of hatred and injustice, and offers hope for a better future. (Prerequisite: RS 10 or RS 101) Three credits.

RS 209 Jewish Interpretations of Scriptures

This course explores ways in which Jews have understood the Hebrew Bible from the first centuries of the Common Era through today. Focusing on specific biblical texts, the course draws interpretations from early classical, legal, and non-legal rabbinic material; medieval commentaries and codes; mystical literature; and modern literary, theological sources. (Prerequisite: RS 10 or RS 101) Three credits.

RS 210 Introduction to Judaism

This course examines Jewish faith and community from the biblical period through the present, paying particular attention to the concepts of God, revelation, religious authority, divine election, and personhood; the celebration of holidays and observances; contemporary religious movements; and organizations and institutions that continue to support Jewish life. (Prerequisite: RS 10 or RS 101) Three credits.

RS 211 History of the Jewish Experience

The course examines the origin and development of Judaism and the Jewish people. It begins with the Hebrew Bible as the source of Judaism and follows its development to the modern era. This overview introduces the Jewish religion, its history, and development. Formerly listed as RS 100. (Prerequisite: RS 10 or RS 101) Three credits.

RS 213 Jews and Judaism in America

What has it meant and what does it mean today to be a Jew in America? Viewing Judaism and Jewishness as inseparable from one another, Jews remain a distinct though by no means homogeneous religious and ethnic group in American society. This course explores the religious, cultural, social, economic, and political diversity among American Jews as well as distinctive beliefs, concerns, and experiences that continue to unite them. The course gives special attention to issues concerning immigration, acculturation, gender, and Black-Jewish relations. *This course meets the U.S. diversity requirement.* (Prerequisite: RS 10 or RS 101) Three credits.

RS 215 Women in Judaism

This course examines ways in which women have understood and experienced Judaism from the Biblical period through the present, drawing on historical writings, novels, theological essays, and films and giving particular attention to the traditional religious roles and status of women, the many ways in which women have understood Jewish self-identity, and recent feminist efforts to re-evaluate and transform contemporary Jewish life. (Prerequisite: RS 10 or RS 101) Three credits.

RS 218 Faith After the Holocaust

The course examines the complexity and horror of the Holocaust and its contemporary historical, moral, theological, and political implications. Was the attempted annihilation of European Jewry an historical aberration in German politics or did it represent an eruption of psychic, social, and religious malignancies embedded in Western civilization? Was the Holocaust unique? Could it have been prevented? And, in light of the Holocaust, what does it mean to speak of faith, either in God or in humanity? (Prerequisites: RS 10 or RS 101) Three credits.

RS 220 The Writings of Paul

This course examines the texts and recurring themes of the writings attributed to Paul, with particular emphasis on Paul's treatment of ethical situations, community, and religious experience. (Prerequisite: RS 10 or RS 101) Three credits.

RS 221 The Good News of the Gospels

This course examines the Gospels of Matthew, Mark, Luke, and John according to contemporary exegetical and literary methodologies. The course examines and compares the theological positions of early Christianity as represented by each writer and by other early Christian gospels. (Prerequisite: RS 10 or RS 101) Three credits.

RS 222 The Writings of John

This course examines the text of the gospel and epistles attributed to John, placing particular emphasis upon the recurring themes in these writings, the distinctive view of Christianity they represent, and the development of early Christianity to which they witness. (Prerequisite: RS 10 or RS 101) Three credits.

RS 230 Introduction to Catholicism

This introduction to the beliefs, doctrines, ideas, and practices that shape the unity and diversity of the Catholic tradition explores theological, devotional, and spiritual forms of expression in their historical and cultural contexts in order to appreciate the particularity of Catholic themes. The course also considers how these themes engage contemporary Catholic life and exercise an influence on the wider culture. (Prerequisite: RS 10 or RS 101) Three credits.

RS 231 The Problem of God

This historical and theological examination of the Christian doctrine of God pays special attention to the problematic aspects of the development of this doctrine through the ages, exploring this development in biblical sources; patristic, medieval, Reformation, and modern times. The course concludes with a consideration of the challenge of post-Enlightenment atheism and of the efforts of contemporary theologians to recast the classical conception of God. (Prerequisite: RS 10 or RS 101) Three credits.

RS 232 Jesus Christ Yesterday and Today

A systematic treatment of the person and work of Jesus Christ, this course examines different interpretations of the meaning of the Christ event from the scriptural sources to contemporary developments. (Prerequisite: RS 10 or RS 101) Three credits.

RS 234 The Church

A study of the development and present-day understanding of the idea of the Church in Roman Catholic theology, this course examines the roots of the concept in scripture and the earlier traditions of the Church, and presents a contemporary ecclesiology through a critical discussion of the First and Second Vatican Councils. (Prerequisite: RS 10 or RS 101) Three credits.

RS 235 Liberation Theology

This course analyzes contemporary theological movements that emphasize the relationship of religious faith and praxis to the sociopolitical realm. The course treats at length the development of the Latin American theology of liberation and examines its theological principles, tracing the influence of this theological outlook on other Third World theologies and on North American and European theological reflection. The course proceeds to a constructive proposal for a contemporary political theology. *This course meets the U.S. diversity requirement.* (Prerequisite: RS 10 or RS 101) Three credits.

RS 236 Christian Feminist Theology

Participants examine some of the key issues being raised in religion by contemporary feminist thinkers. After a brief examination of the history of patriarchy in the Christian tradition and earlier responses by pre-modern feminists, the course considers issues such as feminist methodology, feminist perspectives on traditional Christian doctrines of God, creation, anthropology, Christology, and eschatology. The course concludes with a discussion of the nature of authority and an examination of a feminist theology. *This course meets the U.S. diversity requirement.* (Prerequisite: RS 10 or RS 101) Three credits.

RS 237 The Sacraments in Christian Life

A theological investigation of the sacraments as the source of Christian character, involvement, and witness, this course proposes an anthropological theology as a basis for understanding faith and develops a process/model view of the Christian's relationship with God. The course presents the Eucharist as the focus of Christian self-awareness; baptism, confirmation, and penance as sacraments of reconciliation; and considers special sacramental questions. (Prerequisite: RS 10 or RS 101) Three credits.

RS 238 Evil

This course explores the problem of evil from the perspectives of theology and philosophy. The course considers God and evil, classical theodicies (reasonable justifications of God before the prevalence of evil), modern philosophical accounts of evil, social evil, and the possibility of belief in the face of evil. Within the context of these subjects, the course addresses the following questions: What is evil? What are the roots of evil? What effect does one's understanding of evil have on one's understanding of the human being, of God, and of religion? What is our responsibility in the face of evil? (Prerequisite: RS 10 or RS 101) Three credits.

RS 239 Last Things: The Catholic Belief in Life After Death

This course first explores the Christian understanding of life after death, affirmed in such beliefs as the resurrection of the body, the last judgment, heaven and hell, and the forgiveness of sins. It then goes on to examine the Catholic tradition's particular contributions to these beliefs in its teachings on purgatory and the communion of the saints. The course asks why these ancient beliefs continue to resonate in contemporary popular culture, and examines modern theological efforts to re-construct these hopeful beliefs for our own times. (Prerequisite: RS 10 or RS 101) Three credits.

RS 240 The Medieval Church

This course surveys the development of Christianity in medieval Western Europe through the lens of the Western/Latin Church. It presents a broad history of the social, political and religious aspects of the Church as found in a variety of primary sources: mystical and theological writings, hagiographical literature and rules for monastic communities, and official Church documents. Through these sources students are introduced to the critical analysis of primary texts (dating from c. 300-1500) by giving proper attention to the social and cultural context in which they were written. Topics discussed in this course include: monasticism, the rise of papal power, the First Crusade, and the development of cathedrals and universities. (Prerequisite: RS 10 or RS 101) Three credits.

RS 241 Encountering God in Medieval Christian Thought

This course presents a historical overview of religious thought in the medieval era (c. 500-1500), with a focus on the institutional and theological developments within Christian monasteries and universities. We will first treat the development of Benedictine monasticism and the types of theological literature associated with the monasteries, before looking at the development of the University system in Western Europe and the types of theology produced in the schools. Finally, we will treat the pervasive presence of “mystical theologians” who were often neither monks nor university professors, but developed a rich theology grounded in human experience. (Prerequisite: RS 10 or RS 101) Three credits.

RS 242 Voices of Medieval Women: Silent No More

As scholars work to recover the history of women in the Western Christian tradition, they are discovering that medieval women were neither as silent nor as invisible as previously thought. In this class, students read and interpret the works of select medieval women in a critical yet appreciative way. Students gain familiarity with recent discussions on women's spirituality; a mastery of methods used in the critical analysis of medieval texts (that date from approximately 200-1500); a basic understanding of the social and historical context of these texts; a grasp of the texts' religious content and meaning; and analyze how this material might be relevant to contemporary interests and concerns. (Prerequisite: RS 10 or RS 101) Three credits.

RS 244 Finding God in All Things: The Spiritual Legacy of Ignatius of Loyola

The course aims at a deeper understanding of the origins, development, and present forms of Ignatian spirituality. Students are invited to study in an open yet critical fashion: the life and history of Ignatius of Loyola; the founding and development of the Society of Jesus; the historical context of the major themes of Jesuit spirituality and ways in which these have been worked out in history; strengths, weaknesses, and potential lacunae of this particular charism in the church; its relevance to contemporary spiritual needs, especially in the context of university life; its potential for nurturing lives characterized by love for others and justice for the world. Students are also exposed to the dynamics of the Spiritual Exercises; a variety of prayer forms developed by Ignatius; and a service learning project. The course culminates in a creative project designed by each student. (Prerequisite: RS 10 or 101) Three credits.

RS 245 The Reformation Era

Participants study the religious reform of the 16th century. The course begins by probing the seeds of reform in the late scholastic tradition and in popular spirituality, and proceeds by tracing the development of the ideas and impact of the reformers: Luther, Zwingli, Calvin, Munzer, and Schwenckfeld. The course concludes with an investigation of the Roman Catholic response to reform in the events of the Council of Trent and the Counterreformation. (Prerequisite: RS 10 or RS 101) Three credits.

RS 249 American Catholic Theologians

This lecture/reading course gives students insight into the modern development of Catholic theology in America and what makes it specifically American. Discussion/analysis covers the work of Gustav Weigel, John Courtney Murray, George Tavard, Frank Sheed, Walter Burghardt, and Robley Whitson. (Prerequisite: RS 10 or RS 101) Three credits.

RS 250 Contemporary Morality: Basic Questions

This course introduces the fundamental concepts in moral theology, drawing on major traditions in contemporary Christian thought. The course examines the moral foundations of conscience, freedom and responsibility, virtue and character, and methods of moral decision-making. To deepen the study of basic questions in Christian morality, the course concludes by examining selected applied issues in contemporary morality. (Prerequisite: RS 10 or RS 101) Three credits.

RS 252 Contemporary Moral Problems

This theological examination of contemporary moral problems considers selected ethical issues in contemporary society and leading approaches to moral decision-making. The course investigates moral problems such as euthanasia and physician-assisted suicide, the death penalty, violence and just war theory, bioethics, sexual and reproductive ethics, global poverty, environmental ethics, and issues in business and legal ethics. (Prerequisite: RS 10 or RS 101) Three credits.

RS 253 The Morality of Marriage in Christian Perspective

This course explores marital commitments by exploring the many phases of partnership - courtship, marriage, intimacy, parenting, death - and the specialized skills or virtues these phases require. The course considers questions such as: What kinds of communities, especially faith communities, support marital commitments? What are the forces of society and culture that might threaten them? How might vices, such as physical or sexual abuse, alcoholism, and addiction, erode commitments? The course concludes by assessing how virtuous families might promote peace and justice, and developing an integrated theological account of the moral project we call marriage. (Prerequisite: RS 10 or RS 101) Three credits.

RS 255 Catholic Social Teaching

This course examines the modern teachings of the Catholic Church on peace and justice; Christian/humanist attitudes towards war; pacifism and the just war theory; and changes in global political and economic structures that seem necessary to ensure a peaceful and just world order. (Prerequisite: RS 10 or RS 101) Three credits.

RS 257 Lay Perspectives on Christian Spirituality

This course examines the foundations and elements of a spirituality of everyday life from a lay perspective. It considers issues related to the spirituality of university life and to one's broader, future developmental calling on personal, spiritual, and professional levels. Themes of the course include historical overview of Christian spiritual traditions; key theological foundations such as creation, incarnation, doctrine of the Holy Spirit, grace, priesthood of all believers, action, and contemplation; exploration of the practical implications of such a spirituality; and reflection on action for justice. (Prerequisite: RS 10 or RS 101) Three credits.

RS 263 Non-Traditional American Churches

This course begins with a critical inquiry into the nature of religion in America and the history that led to the constitutional guarantee of religious freedom. Students develop and defend criteria to evaluate nontraditional forms of "church" that have resulted from this freedom. After reviewing the origin, history, and beliefs of the major non-traditional churches established by Americans, the course explores the development of American evangelism and its impact on modern society through the "Electronic Church." (Prerequisite: RS 10 or RS 101) Three credits.

RS 265 Non-Traditional American Religious Groups

This course develops a critical sense regarding the nature of religion as experienced in pluralistic America by investigating a number of groups that illustrate the diversity of religious experience in America such as The Mighty I Am, Jonestown, Morningland, and Theosophy. Students formulate criteria for judging the authenticity of religious movements through an analysis of these examples. (Prerequisite: RS 10 or RS 101) Three credits.

RS 270 Introduction to Islam

This course introduces Islam as a global religion and civilization. After a brief historical overview, the course focuses on the foundational concepts of Islam - Quran, Prophet, Ritual and Community, and then analyzes how these concepts are interpreted in the main intellectual traditions, in the ways that Islam is practiced in different cultures and in the works of modern thinkers. This course meets the world diversity requirement. (Prerequisite: RS 10 or RS 101) Three credits.

RS 275 Islam in America

This course is a survey of Muslim life and religious movements connected to Islam in North America. The course traces the history of Islam on the continent from the Atlantic slave trade to the post-9/11 era. We will investigate the many ways in which Islam, as both a religion and idea, has appeared on the American horizon and in the American imagination. The historic diversity of Muslim communities on the continent will be explored through their respective beliefs, cultures, and sense of identity. Special attention will be paid to the African-American and Immigrant Muslim communities. This course meets the U.S. diversity requirement. (Prerequisite: RS 10 or RS 101) Three credits.

RS 276 Islamic Theology

This course is a survey of major tenets of Muslim belief, points of difference, and schools of theological thought. We will explore important points of faith and investigate the debates that have emerged over the course of Islamic history. Special attention will be paid to the areas of doctrinal formulation, scholastic theology and mystical thought. Our primary readings will consist of both primary sources in translation and current secondary literature. (Prerequisite: RS 10 or RS 101) Three credits.

RS 280 Hinduism

This course introduces the seminal texts, concepts, and images of the major religious tradition of India. Topics include Vedic ritualism; Upanishadic mysticism; yoga meditation; the Bhagavad Gita; the caste system; Vedanta philosophy; the cults of Rama, Krishna, Shiva, and the Goddess; and Gandhi's philosophy of non-violent action. The course views Hinduism as a historical phenomenon, a formative influence on Indian culture and society, and a response to the human condition. *This course meets the world diversity requirement.* (Prerequisite: RS 10 or RS 101) Three credits.

RS 285 Buddhism

This course explores the Indian Buddhist tradition, from its beginning in the life of Shakyamuni Buddha through the present revival of neo-Buddhism in the activism of oppressed classes. The course considers the early formative ideas of the Buddha - the Awakened One - as they unfold in the course of Indian history and society, and discusses Buddhist meditation and philosophy as procedures devised to elicit the awakened state. Using written and visual works, the course examines developments in Buddhist religious orders, lay social life, and the rise of the Great Vehicle tradition. Art and archaeology provide a context for Buddhism's compelling missionary activity throughout Central and Southeast Asia. Formerly listed as RS 188. *This course meets the world diversity requirement.* (Prerequisite: RS 10 or RS 101) Three credits.

RS 287 Buddhist Thought in India

The course investigates the basic Buddhist contributions to philosophical thought in the country of its origin - India. Through the writings of the seminal doctors of the tradition, ideas concerning metaphysics, causation, linguistic deconstruction, and psychological modeling are explored. Each direction is examined in light of the lively and dynamic theoretical environment that provided India with the intellectual sophistication it still enjoys today. *This course meets the world diversity requirement.* (Prerequisite: RS 10 or RS 101) Three credits.

RS 289 Tantrism

The course covers the medieval formation of tantrism, a pan-Indian approach to religion that was to develop separate but related subcultures in Buddhism, Hinduism, and Jainism. With its ability to sacralize formulations of power and sexuality, it went on to become the most widely spread form of Buddhism, with premodern forms found in Tibet, China, Japan, and Eastern Europe. Recent expressions have been found all over the world. The course examines questions of tantrism's medieval origins, its espousal of antinomian conduct, its geographical spread, attempts at its domestication, and its recent developments in India and abroad. *This course meets the world diversity requirement.* (Prerequisite: RS 10 or RS 101) Three credits.

RS 299 Special Topics in Religious Studies

Students and faculty in this course will engage in an in-depth exploration of a significant topic in the field of Religious Studies. The content will vary in successive offerings of this course, depending on the professor. The course may be repeated with the consent of the professor. (Prerequisite: RS 10 or RS 101) Three credits.

RS 300 Second Temple Judaism and the Dead Sea Scrolls

The Dead Sea Scrolls have rightly been called the greatest manuscript discovery of the twentieth century. Discovered in 1947, they have made a tremendous impact on how scholars today understand Judaism and Christianity in antiquity. Our examination of the community, texts, and archeology of the Dead Sea Scrolls will begin with a study of the Second Temple Period (520 BCE-70 CE), one of the most important in the history of Judaism. This course will examine the political, social, and theological developments of this period so that the community of the Dead Sea Scrolls and their writings may be situated within their proper context. Students will learn to read primary texts closely and secondary texts critically as they consider the influence and relationship between texts and their community. (Prerequisites: RS 10 or RS 101, and one 200-level religious studies course) Three credits.

RS 301 Religious Diversity in Early Judaism and Christianity

This course examines the emergence of Early Judaism during the ancient and late antique period (450 BCE-650 CE) and the many different expressions that it had, many of which did not survive into the modern period. Among the groups that will be studied are the Samaritans, Sadducees, Zealots, Pharisees, Essenes, and Christians. This course will consider how different Jewish communities, both inside and outside the land of Judea, constructed images of the "other" as they sought to develop distinct religious identities. In addition to a focus on primary texts from this time period, secondary readings will be introduced that contextualize these groups in antiquity. (Prerequisites: RS 10 or RS 101, and one 200-level religious studies course) Three credits.

RS 315 Modern Jewish Theology

This course explores ways in which selected 19th- and 20th-century Jewish theologians (Buber, Rosenzweig, Heschel, Hartman, Fackenheim, Blumen-thal, Greenberg, Plaskow) attempt to meet challenges of faith and Jewish self-identity. Topics include the nature of the covenant, the role of human autonomy, liturgical images of divinity, and faith after Auschwitz. (Prerequisites: RS 10 or RS 101, and one 200-level religious studies course) Three credits.

RS 320 The Reinterpretation of the New Testament

This introduction to the critical study of the New Testament and its Christologies reviews the varying titles for Jesus, comparing them with the original Jewish or Greek usage. The course considers the process of reinterpretation of Jesus in the New Testament as a possible model for interpretation today. (Prerequisites: RS 10 or RS 101, and one of the following: RS 220, 221 or 222) Three credits.

RS 325 The Quest for the Historical Jesus

This course examines the increasingly public debate over whether an adequate basis exists for reconstructing a description of the life of Jesus of Nazareth. It examines the evidence available from all sources, the criteria by which that evidence has been interpreted, and the resulting, often contradictory, portrayals. The course also discusses the relationship between this "historical Jesus" and the subsequent faith tradition of Christianity. (Prerequisites: RS 10 or RS 101, and one 200-level religious studies course) Three credits.

RS 341 Selected Topics in the Catholic Tradition

This course examines particular themes, events, or individuals in the Catholic tradition, with special regard for their historical contexts and the ways in which they contribute to the self-identity of the Catholic tradition. The course includes close reading of primary sources; the subject matter changes from semester to semester. Students should consult the University registrar's listing of new courses to determine the specific material treated when the course is offered. (Prerequisites: RS 10 or RS 101, and one 200-level religious studies course) Three credits.

RS 343 The Papacy

This survey of the Roman Catholic papacy, generally focuses on a single figure, theme, or period, and places that figure, theme, or period within the larger historical, cultural, and ecclesial context. A significant part of the course treats theological issues, using as texts either papal writings, significant encyclicals, or conciliar statements and actions. The course also includes a critical assessment of the role of the papacy within the Roman Catholic Church and a consideration of the role of the papacy in interreligious dialogue and world affairs. (Prerequisite: RS 10 or RS 101) Three credits.

RS 350 The Classic: Truth in Religion and the Arts

This course examines the idea of the classic as a model for establishing relationships between religious language on the one hand, and poetic discourse and artistic expression on the other. What truth do classics lay claim to and how do they embody it? The course compares secular and religious classics before investigating the value of the classic model in the process of doing theology. (Prerequisites: RS 10 or RS 101, and one 200-level religious studies course) Three credits.

RS 354 Saints and Sinners: Images of Holiness in Contemporary Fiction

This course examines the complexity of current understandings of what it is to be holy. It begins with a brief consideration of traditional models of holiness. It turns next to several influential theories of spiritual growth, and then, in the light of these theories, looks at a series of 20th-century novels that examine the idea of holiness. Authors vary but include Georges Bernanos, Shusaku Endo, Mary Gordon, Graham Greene, David Lodge, Flannery O'Connor, Gloria Naylor, Muriel Spark, and Jean Sullivan. (Prerequisites: RS 10 or RS 101, and one 200-level religious studies course) Three credits.

RS 363 Religious Values in Film

This course focuses on the search for meaning in human life as experienced and depicted in 12 films by distinguished filmmakers. The first six films mirror this search in personal life, asking in various ways whether we are isolated and alone or linked and dependent on others. They also grapple with the problem of evil and the experience of salvation. The second six films concern themselves with the meaning of life in society. In different historical contexts they ask whether the universe is indifferent or friendly to our community building, and raise the problem of God and the religious significance of secular achievement. (Prerequisites: RS 10 or RS 101, and one 200-level religious studies course) Three credits.

RS 377 Sufism and Islamic Spirituality

In this course, students will study the beliefs, history, and practices found in different forms of Islamic spirituality, especially the mystical tradition of Sufism. During the course of this semester students will look at several spiritual movements from across the Muslim world with special attention given to the Middle East, the Subcontinent of India, Sub-Saharan Africa and Europe/America. The course will include critical readings of famous mystics like Rumi, Hafiz, and Ibn 'Arabi. Artistic and performative projects will accompany the course in order to immerse students in the arts, cultures and ideas important to Islamic spirituality. *This course meets the world diversity requirement.* (Prerequisites: RS 10 or RS 101, and one 200-level religious studies course) Three credits.

RS 388 Buddhist Spirituality

The course explores the cultivation of meditation and spirituality in the Buddhist tradition, its embodiment in seminal figures in India, China, Japan, and Tibet, and their individual expressions of contemplation and spiritual experience. The association of these Buddhist saints with value systems, specific sites, and sacred activities is examined, especially as the relationships between these persons and their activity in the world reflect their religious path. Particular emphasis is placed on the questions of religious inspiration and creativity, and the manner that these are formed in the process of training in contemplation. *This course meets the world diversity requirement.* (Prerequisites: RS 10 or RS 101, and one 200-level religious studies course) Three credits.

RS 398 Independent Study

Students, in consultation with a department director, define their course of study. (Prerequisites: RS 10 or RS 101, and one 200-level religious studies course) Three credits.

RS 399 Religious Studies Seminar

This seminar offers an in-depth investigation of a significant figure, issue, or problem in religious studies. Enrollment requires the permission of the instructor. (Prerequisites: RS 10 or RS 101, and one 200-level religious studies course) Three credits.

Program in Russian and East European Studies

Tucker (DSB/Finance)

The end of the Cold War, along with the collapse of the Soviet Union and communist regimes in Eastern Europe, offers a unique opportunity to take a fresh look at an old field: Russian and East European area studies. Formerly caught within the framework of the Cold War, new societies are emerging, struggling to come to grips with their pasts and forging their own unique futures.

The Russian and East European studies minor, an interdisciplinary program developed jointly by the College of Arts and Sciences and the Charles F. Dolan School of Business, offers students an opportunity, from a base major either in international studies or one of the disciplines, to develop a focus on this dynamic area of the world.

Requirements

To earn an 18-credit Russian and East European studies minor, students complete six three-credit courses. Five of these courses, from a range of seven disciplines, must be exclusively or substantially concerned with Russia and/or Eastern Europe. At least three different disciplines must be represented. The final course, RES 310 Capstone Seminar: Current Topics in Russia and Eastern Europe, is required of all minors in their junior or senior year. This seminar is either team-taught by a rotating group of faculty from several disciplines, or is an independent project with a faculty advisor.

Independent study and internships are encouraged, and can be substituted for any course with the approval of appropriate faculty and the program director. Students are also encouraged to apply for a junior semester or year abroad in Russia or Central or Eastern Europe from a wide range of affiliated programs, including American Councils (St. Petersburg), the Consortium on International Educational Exchange (Prague, Budapest, St. . Petersburg, Yaroslavl, and Fairfield's own programs at St. Petersburg's Herzen University, the St. Petersburg State University of Economics and Finance, Pomor University (Arkangelsk), Cherepovets State University (Cherepovets), or Immanuel Kant University (Kaliningrad).

Course Descriptions

RES 110 Introduction to Russian Culture and History

This interdisciplinary course provides a comprehensive introduction to Russian civilization seen through the lens of visual expression, performance, and drama. Students revisit Russian painting, architecture, dance, music, and film at pivotal historical junctures, seeking to comprehend the underlying ideologies of orthodoxy, autocracy, totalitarianism, and perestroika. Images serve as our principle gateway to the deeply religious cultural imagination that has never experienced Renaissance and Reformation. Critical examination of extensive Western and Eastern influences explains the creation of native Russian aesthetic and ideology by way of adaptation, accommodation, and transformation of multicultural and multiethnic input. Three credits.

RES 310 Capstone Seminar: Current Topics in Russia and Eastern Europe

This interdisciplinary seminar, team-taught by faculty members from different disciplines or available as an independent project, focuses on current and changing developments in Russia or Eastern Europe and covers culture, politics, business, and economics, enabling students to integrate their different disciplines in a case-study format. The course includes oral and written assignments in addition to a special seminar project, designed by students in close consultation with instructors. Open to juniors or seniors only. Three credits.

RES 395 Internship in Russian and East European Studies

Candidates work a minimum of eight hours per week during the semester either for the Russian and East European Studies Program director, helping with publicity, coordination, and public events, or for an organization or business in the area doing work in Russia or Eastern Europe. Under the direction of a faculty member in Russian and East European studies, interns regularly report on their work and write an evaluation of the experience at the end of the summer. The internship is available only to juniors and seniors seeking a minor in Russian and East European studies. Three credits.

Sociology is the scientific study of human society and social behavior. It seeks to understand why individuals form groups and how membership in groups influences a person's behavior. Why do human beings live in families? Why do the rich act, and even think, differently from the poor? What makes some people break social rules and others obey them? What holds societies together? Why do they sometimes break apart? Why do all societies change over time? These are questions that sociologists ponder.

Anthropology asks similar questions, while emphasizing cross-cultural, cross-disciplinary and longer-term perspectives. The discipline includes biological, archeological, linguistic, and cultural approaches. The comparative approach highlights patterns of similarity and difference among human groups and helps people understand their own practices and those of others in a broader cross-cultural and historical context.

The department currently offers a major and a minor in sociology, and a minor in anthropology. Students majoring in sociology at Fairfield University begin their study by taking several fundamental courses that provide them with an understanding of the basic concepts and methodology of the field. Students build on this foundation by selecting from a wide variety of elective courses. Students are carefully and individually advised throughout their stay at Fairfield.

The faculty strives to clarify career goals and to put together a concentration of courses and experiences that ensure for the student intellectual fulfillment and a viable career.

All majors and minors are urged to consult with the chair and other members of the Sociology and Anthropology Department in planning their academic programs. This is especially important in coordinating particular course concentrations most suitable for individual career goals.

Requirements

Sociology Major

For a 30-credit major in sociology, students complete:

- SO 11 Introduction to Sociology
- SO 221 Statistics: Social and Political Data Analysis
- SO 222 Methods of Research Design
- SO 228 Classical Social Theory
- SO 229 Contemporary Social Theory
- an additional 15 credits in elective sociology and anthropology courses

Sociology Minor

For an 18-credit minor in sociology, students complete:

- SO 11 Introduction to Sociology
- SO 222 Methods of Research Design OR SO 228 Classical Social Theory
- an additional 12 credits in elective sociology and anthropology courses

Anthropology Minor

- AY 10 Introduction to Four Field Anthropology
- AY 110 Introduction to Biological Anthropology OR AY 111 Introduction to Cultural Anthropology
- an additional 9 credits in elective anthropology courses (may include one sociology course)

Internships

Students may elect to take Field Work Placement for one or two semesters in their senior year in addition to fulfilling the basic requirements of their major.

Sociology Major with a Minor in Educational Studies and the 5-Year Teacher Education Program

Sociology majors who elect a minor in Educational Studies and who have been admitted to the 5-year Integrated Bachelors-Masters Degree and Teacher Certification Program should consult with Dr. Terry-Ann Jones in the Department of Sociology and Anthropology and Dr. Patricia Calderwood, Department of Educational Studies and Teacher Preparation, GSEAP, for additional information. See Program in Education, pg. 119.

Course Numberings

Course numbers have changed from prior catalogs; courses listed here, and those cross-listed in other departments, are not open to students who took them for credit under a previous number.

Course Descriptions

AY 10 Introduction to Four-Field Anthropology

Who are we, where do we come from, and how do we know? Why is life unfair and why do intolerance, poverty and inequality exist? Anthropologists hold no monopoly on truth or explanation, but they do employ a wide-range of methods to explore what it means to be human. In this introduction to anthropology we will survey four sub-fields that comprise this multi-disciplinary science: biological anthropology, archaeology, sociocultural anthropology, and linguistics. Over the course of the semester, we will explore what anthropology and its sub-fields contribute to our understanding of ourselves, our histories, and our world. This course meets the world diversity requirement. Three credits.

AY 52/IL 52 Culture and Political Economy

This course examines the ways in which global political economic dynamics impact local cultures. Students will begin with classic texts in social theory, examine how this theory informs contemporary debates, and look to small-scale societies in the Global South for an intimate, ethnographic perspective of our global era. Three credits.

AY 110 Biological Anthropology

The study of natural selection, primate evolution, and living primate societies provides a baseline from which to study the evolution of the human species. The course also traces human cultural and social development from the foraging bands of the first humans to the civilizations that appeared at the dawn of written history. Students also examine physical variation among living populations. Three credits.

AY 111 Cultural Anthropology

Why is there such variety in the way people live, dress, speak, eat, love and fight? This course explores the shared patterns of thought, behavior, and feelings - that is, the cultures - of a number of peoples and presents explanations for the forms they take and the differences between them. The course helps students develop a new perspective on the values and institutions of Western culture. This course meets the world diversity requirement. Three credits.

AY 130 Cultures of Africa

This course explores the great diversity of the numerous cultural traditions of Africa. It begins with historiography and an abridged review of African history from the dawn of humankind to creation of modern African nations. To explore several cultural traditions from the continent, regional case studies, African literature, film, and music are analyzed. The objective of this course is to introduce students to the rich diversity of African cultural traditions, and to equip students with the African Studies and Anthropology research skills necessary for further explorations into the Cultures of Africa. This course meets the world diversity requirement. Three credits.

AY 152 Islamic Societies and Cultures

This is an anthropological inquiry into a number of "Muslim societies," from Africa and the Middle East to Asia and the Pacific. This course investigates the cultural, ethnic, and linguistic diversity within these societies, while seeking to understand what they have in common with each other and with their non-Muslim neighbors. This course meets the world diversity requirement. Three credits.

AY 163 Culture and Inequality

This course focuses on the concepts of "culture" and "inequality" - two terms employed to deal with "difference" in a range of intriguingly different, and morally charged, ways. The course explores recent work in anthropology, economics, and sociology using culture and/or inequality as a lens through which to view various issues in contemporary social theory. In the process, students work to discover what kind of lens culture and/or inequality provides, how our implicit understandings of these ideas shape how we think about the world, and how we might better use such ideas to do our thinking. Three credits.

AY 168 Women and Men: The Anthropology of Gender

Through a comparison of selected Asian, Middle Eastern, African, and Native American societies, this course explores the ways that culture can mold the biological facts of sexual difference into socially accepted behavior, creating two, and sometimes more, genders. Topics include the allocation of work, power, and prestige between men and women; the belief systems that legitimate gender roles; and some possible causes for the wide variation that exists among cultures. This course meets the world diversity requirement. Three credits.

AY 175 Sustainable Development: Anthropological Perspectives

This course examines sustainable development from an anthropological perspective. With a focus on the contested meaning of both "sustainability" and "development," students will grapple with various theoretical, methodological, and ethical perspectives on building a just future. Learning will be practice driven and students will write journals, blogs and reflective essays, develop expertise in various anthropological methods, and pursue independent research on sustainability in their local community. Students will integrate their experiential learning with readings on ecology and economic development in order to critically examine the values, assumptions and data that underpin different perspectives on desirable social change. Three credits.

AY 180 International Research Practicum

This will introduce students to the practicalities of international research, with particular emphasis on qualitative social science methods and the eventual aim of producing a viable grant proposal. The course will be taught from an anthropological perspective, but the skills developed should be broadly applicable to the social sciences and humanities. Three credits.

AY 189 Ethnographic Knowledge and Practice

This course focuses on the history and practice of ethnographic writing, a form of intellectual production at once art and science, evocation and explication. Emerging in the 20th century as the preeminent form of anthropological expression, ethnographies are one of the few scholarly means of understanding other cultures and societies in meaningful depth. At the same time, ethnographies reveal as much about the disciplines and societies in which they are produced as they do about distant "others." Three credits.

AY 190 North African Society and Cultures

This course is an anthropological examination of North Africa, with a specific emphasis on Morocco. From agriculture to military history, food to dress, literature to contemporary issues like Islamism, feminism, migration, and development: students will immerse themselves in the North African context with the aim of coming to appreciate this ancient nexus between Europe, Africa, and the Middle East. This course will explore the value and limits of knowing people different from ourselves. This course meets the world diversity requirement. Three credits.

AY 199/PH 265 Philosophy and Economic Anthropology

This course examines "the economy" from philosophical and anthropological perspectives. We will investigate why people produce and exchange things, why they seek to amass things in some circumstances and give them away in others, and how our modern understandings of value, debt, and rationality emerged. (Prerequisite: PH 10 or PH 101) Three credits.

SO 11 Introduction to Sociology

This introduction to sociology provides students with a sense of sociology's orientation; its particular way of looking at human behavior in the context of people's interaction with each other. The course emphasizes the kinds of questions sociology asks, the methods it uses to search for answers, and how it applies the answers to problems of people's everyday lives and issues of social policy. Three credits.

SO 112 American Society

This course analyzes the dominant ideology and values that have shaped American culture - namely the Protestant ethic - and how and why these values are changing. The course also analyzes major institutional trends that have transformed and continue to transform America and the modern world - bureaucratization, industrialization, urbanization, the rise of the business corporation, science, and technology - and the effects of these institutions in producing new personality types, mass society, and rapid social change. The course provides a macro-sociological framework. This course meets the U.S. diversity requirement. Three credits.

SO 142 Sociology of the Family

The family is a basic social institution of all societies. This course, which examines family systems as they exist in other cultures and in times past, focuses on understanding the contemporary American family system. Students consider American patterns of dating, mate selection, sexual behavior, marriage, parenting, and aging, as well as alternative life styles and family instability. Three credits.

SO 144 Sociology of Sexuality

This course explores the social construction of human sexual behavior, examining the influence of social institutions on sexuality, social responses to variations in behaviors, and the organization of sexual identities. Three credits.

SO 151 Sociology of Religion

This course offers a combined theoretical and empirical treatment of the sociology of religion, the character of religious institutions, the relations of religious institutions with other institutions in society, and the internal social structure of religious institutions. It gives particular attention to the process of secularization in the modern world and the crisis this poses for traditional religion. This course meets the U.S. diversity requirement. Three credits.

SO 161 American Class Structure

This course examines the roots and structure of class in the United States and the consequences of this hierarchical arrangement on everyday life. It focuses primarily on social class; however, the dynamics and consequences of social class cannot be fully understood without addressing the complex interconnections between class, race, and gender. This course meets the U.S. diversity requirement. Three credits.

SO 162 Race, Gender, and Ethnic Relations

This course analyses sociological and social psychological dimensions of race relations, ethnic interaction, and the changing role and status of women. It focuses on the American scene but also examines problems of women and minorities in other parts of the world and their importance for world politics. It also considers what sociologists and social psychologists have learned about improving dominant/minority relations. This course meets the U.S. diversity requirement. Three credits.

SO 163 Urban/Suburban Sociology

This course explores the nature of the city and growth of metropolitan regions in the contemporary world; the ecological approach and the use of demographic data in the analysis of modern urban communities; social organization of metropolitan regions and the emergence of urban-suburban conflict; big-city politics, community control, and regional government as dimensions of organization and disorganization in city life; and city planning and urban development at local and national levels as efforts to solve the urban crisis. Three credits.

SO 165 Race, Cities and Poverty

The geography of cities is in constant flux. People move in and out, businesses open and close, city government institutes social policy in response to existing changes in different communities. Many of the changes in cities have been influenced by racial-ethnic and economic dynamics. In this course we will examine the ways race has shaped our perceptions of and responses to community. Why are urban areas "racialized"? Why does talk of the underclass imply black Americans and Latinos? We will focus primarily on black Americans, but will also consider white ethnic groups and other ethnic groups in discussion. In our examinations we will focus on case studies of urbanization and race such as post-Katrina New Orleans, southern migration to Chicago, and Bridgeport. This course meets the U.S. diversity requirement. Three credits.

SO 166 Feminism, Gender, and Everyday Life

This course provides an introduction to the study of gender through a feminist lens. The central themes of the course are the changes and continuities of gender roles within the United States, the social processes that influence our gender identities, and the connections between gender, power, and inequality. The course addresses the ways in which the media, popular culture, work, and schools have been pivotal sites for the creation and maintenance of gender performances, and explores sites of resistance in art and activism. The course pays special attention to the ways in which race, class, and sexualities intersect processes of gender relations and social change. Three credits.

SO 169 Women: Work and Sport

Sex and gender stratification exists in most areas of everyday life throughout American society. This course concentrates on women in the workplace and in sport. It analyzes women's occupational status and the accompanying roles from the colonial period to the present from a variety of theoretical perspectives. Since sport is a microcosm of society, the course treats the perceptions and experiences of female athletes in 20th-century America as a mirror of the inequality within the larger world. This course meets the U.S. diversity requirement. Three credits.

SO 171 Criminology

This course examines crime rates and crime trends in the U.S. Theories of criminal behavior are critically analyzed. It also explores victimless crime, white collar crime and organized crime. Societal responses to crime and criminals are addressed. Three credits.

SO 175 Sociology of Law

Based in the relationship of law and society, this course explores the meaning of law, civil disobedience, and other challenges, and law as an agent of social change. It takes as its major theme legal equality versus social inequality and analyzes this theme in terms of discrimination against the poor, women, and various racial groups. Students discuss the role of lawyers, the police, and the courts in American society in the second half of the semester. Three credits.

SO 179 Death Penalty in America

This course is an in-depth analysis of capital punishment. The history of the death penalty and its contemporary status in the U.S. is explored. Public opinion and the decisions of the courts, prosecutors, and juries are addressed. Some of the questions raised include the following: Is the death penalty a deterrent? Is it racially biased? Does it victimize the poor? Are the innocent ever convicted and executed? What sociological factors influence clemency decisions? How is the U.S. position on the death penalty perceived by the international community? Three credits.

SO 181 AIDS in the United States

This course covers epidemiological, public health, social scientific, and artistic responses to the AIDS crisis. Topics include the genesis of AIDS and its epidemiological shifts, the global impact of the disease, reproductive health, sexuality, community efforts to "fight AIDS," policy developments concerning the virus, and the ethical and political implications of such policies. The goal of this course is to address how various factions (politicians, social scientists, health care providers, activists, and so on) have grappled with HIV and AIDS. This course meets the U.S. diversity requirement. Three credits.

SO 184 Population: Birth, Death, and Migration

Demography, the study of population, is the basis of this course. It examines the causes and consequences of population change. The course addresses global population problems and those faced by the United States. Students analyze real demographic data during weekly demographic techniques sessions. This course meets the world diversity requirement. Three credits.

SO 185 Introduction to International Migration

This course examines the causes, processes, and concerns of international migration, which are explored through the use of case studies that include a wide range of countries from different world regions. These case studies include international migrants, such as refugees, labor migrants, and undocumented migrants. In addition to studying the migrants and the reasons for their international movement, participants have the opportunity to discuss opposing perspectives on the immigration policies of developed countries. This course meets the world diversity requirement. Three credits.

SO 188 Contemporary Latin American and Caribbean Society

This course introduces the basic political, economic, and sociological elements of contemporary Latin America and the Caribbean. It begins with an overview of the historical events that have shaped the region. While examining the region as a whole, this course also emphasizes the political, economic, and cultural diversity that characterizes Latin America and the Caribbean. Drawing from several disciplines, while emphasizing sociological approaches, this course explains some of the positive, as well as the more dubious events in contemporary Latin American and Caribbean society. Topics include popular culture, migration, political change, regional integration, urbanization, gender, and inequality, among others. Case studies will be selected for more detailed discussion based on current events. Three credits.

SO 190 Globalization

The single most powerful force transforming the world in which we live is the accelerating process of globalization. Information à la the Internet, ideas, technology, products, services (and even people, the slowest to move) are all moving within and across national boundaries every hour of every day. As Joseph Stiglitz, former chief economist for the World Bank, puts it, "Globalization is like a giant wave that can either capsize nations or carry them forward on its crest." The goal of this course is to begin to understand the complex causes and effects of globalization. What's driving it and what kind of future is it likely to bring? Three credits.

SO 191 Social Change in Developing Nations

This course examines the major societal changes occurring in developing countries, seeking answers to two basic questions: To what extent are the current modernization efforts of Third World nations comparable to the earlier experience of the United States and Western Europe? How do existing inequalities and dependencies between developed countries and Third World nations affect their chances of modernizing? Students complete a semester-long Web-based study of a particular country. This course meets the world diversity requirement. Three credits.

SO 192 Social Work: An Introduction

This overview of the social work profession emphasizes the knowledge base, theories, values, and skills that underlie generalist social work practice with individuals, groups, families, and communities. Students consider a range of social problems and social policy concerns as well as the impact of these issues on diverse client populations. The course also conducts a related exploration of the role of the social worker in agency settings and the various fields of practice. Three credits.

SO 193 Social Work: The History of Social Welfare and Social Work

This course explores the development of the social work profession within the context of the evolution of social welfare in the United States, emphasizing the political, economic, social, and philosophical forces that have forged social welfare policy and helped shape the social work profession. Exploration of the importance of divisions in American society regarding social justice and issues of class, race, ethnicity, and gender provide a framework through which to view current controversies such as welfare reform and the feminization of poverty. Three credits.

SO 221 Statistics: Social and Political Data Analysis

This course provides a basic introduction to the role of statistical analysis in understanding social and political data, with an emphasis on actual data analysis using the University's computer facilities. It uses an extensive social and political data archive including 2000 Census data, political polls, and national survey data for computer analysis. (Prerequisite: SO 11) Four credits.

SO 222 Methods of Research Design

This course examines the nature and function of scientific methods as applied to the field of sociology, emphasizing survey research design and secondary analysis of existing data. Student teams design and conduct research projects as part of the course assignments. (Prerequisite: SO 11) Four credits.

SO 228 Classical Social Theory

This course in sociological theory concentrates on the writings of Smith, Marx, Durkheim, and Weber, placing their theories in the context of the social, economic, political, and intellectual turmoil of the late 18th and early 19th centuries. The course includes a focus on the development of sociology as a discipline in the early 20th century and the enduring concerns of the perspective to analyze "modern" industrialized societies. (Prerequisite: SO 11) Three credits.

SO 229 Contemporary Social Theory

This course focuses on contemporary American and European sociology and its development after 1945, examining critical social theory, structural functionalism, symbolic interactionism, ethnomethodology, feminism, world systems theory and post modernism. Contemporary application is a central concern in the course. (Prerequisite: SO 11) Three credits.

SO 279 Criminal Justice System Seminar

This seminar explores in detail the workings and problems of the criminal justice system in the United States. In addition to investigating the sources of criminal behavior, the course focuses on the arraignment process, probation, the trial, sentencing, prison reform, and parole. Three credits.

SO 397-398 Field Work Placement

In this one- or two-semester internship program, students are placed in professional and service settings where they work under supervision and acquire experience in the area chosen for placement. In addition, they integrate their experiences with the intellectual foundation acquired in their academic courses. Open to senior majors only. Three or six credits.

SO 399 Independent Research

Upon the request and by agreement of an individual professor in the department, students undertake a one-semester independent study on a defined research topic or field. Three credits.

The Major

Visual and Performing Arts offers five different programs of study. Students may choose to major in: Art History (requires 30 credits); Film, Television & Media Arts (requires 39 credits); Music (requires 30 credits); Studio Art (requires 33 credits); and Theatre (requires 33 credits).

The Minor

A minor in Visual and Performing Arts can be obtained upon completion of 18 credits in one of the five areas of concentration: Art History; Film, Television, & Media Arts; Studio Art; Music; or Theatre. For further information about the curriculum and areas of concentration, consult the program directors:

Art History: M. Rose
Film, Television, & Media Arts: M. Scalese, S.J.
Music: B. Torff
Studio Art: S. Chamlin
Theatre: L. Porter

Department Mission and Goals

The visual and performing arts have always been an integral part of the human experience as they weave together knowledge, skills, and personal and cultural values. Skill expresses knowledge, and personal values drive one's artistic and aesthetic choices. All students should acquire knowledge of history, context, theory, and the interaction of art, society, and the self. Towards this end, students will become familiar with the major artistic achievements of the visual and performing arts.

The Department of Visual and Performing Arts at Fairfield inculcates the practice of developing intuitive, creative, expressive, and aesthetic faculties and the ability to connect these with reasoning skills. The creative process is a means of giving shape to one's own experience and requires a certain amount of introspection, experimentation, and risk taking. The aim of the core curriculum requirement is to instill empathy, discernment, and sensitivity to and respect for the expressions of individuals and groups and their visions of the world. With exposure to the visual and performing arts as a major or minor in the department, students have the creative and artistic abilities required for a variety of future professional challenges.

University Core Course Requirement

The core curriculum requires that all Fairfield undergraduate students complete two semesters of coursework in Visual and Performing Arts. Our courses are divided between those that cover material from an historical/theoretical point of view, and those that involve the use of applied skills with which you actually make or perform works of art. The core curriculum requires that at least one of your two courses in this department be a history/theory course. Courses that fulfill the history/theory requirement for the core curriculum are labeled "(H)"; those that fulfill the applied art requirement are labeled "(A)".

Department Core Learning Outcomes

History (H):

- Students will have a deep understanding of the historical, theoretical, and critical constructs of a specific arts discipline.
- Students will gain factual knowledge about works of art and will be able to identify and analyze them in terms of discipline-specific concepts and language, as well as style, genre, and historical context.
- Students will demonstrate knowledge of discipline-specific artistic traditions, as well as the fundamental principles, generalizations, and theories behind those artistic traditions.
- Students will apply course material by analyzing and evaluating works of art, both in speaking and in writing.
- Students will develop, through the study of art, insights into how art affects and reflects cultures and contexts, providing students with opportunities to access, express, and integrate the meaning of the arts across a variety of disciplines.

Applied (A):

- Students will have a deep understanding of the creative processes involved in making art and develop a portfolio of their own artistic creations.
- Students will create a portfolio of their own work, which captures not only the ongoing process of creation and revision, but also demonstrates students' developing mastery of discipline-specific artistic techniques.
- Students will be able to critically evaluate their own artistic output, as well as that of others, both in speaking and in writing, using the evaluative norms and competencies of their art, as well as using discipline-specific concepts, language, and techniques.
- Students will develop the essential means for expressing ideas, experiences, feelings, and deepest beliefs, both of themselves and of the wider community.

Additional Fees

Studio Art courses require a materials fee. There are also separate charges for private music lessons. Students enrolling in these courses will be billed an additional fee per course on their bursar bill.

Facilities and Resources

- The Bellarmine Museum of Art stewards a rich collection of paintings, sculptures, and decorative art objects, including the Samuel H. Kress Collection of Italian Paintings, a large selection of historic plaster casts, a range of non-Western art objects, and a loan of twenty objects from the Metropolitan Museum of Art/The Cloisters Museum. The BMA mounts up to five temporary exhibitions each year.
 - The Thomas J. Walsh Gallery features temporary exhibitions of modern and contemporary art.
 - Experimental art galleries feature student work.
 - Our historic plaster cast collection began in 1991 and it is comprised of long-term loans and gifts from the Metropolitan Museum of Art, representing masterpieces from ancient Greece, Rome, and Renaissance Italy. Additional gifts from the Metropolitan Museum of Art, the Acropolis Museum, and individual donors, have expanded the collection to eighty casts. The collection provides students in the Art History and Studio Arts programs, and Classical Studies, additional opportunities for study in the Bellarmine Museum of Art and the casts rooms in Loyola Hall.
-

- The Mutrux Visual Resources Collection (VRC) is the primary visual teaching resource and laboratory for the Art History Program, with state of the art computer and digital imaging equipment. The VRC has a burgeoning digital image library used by all of the faculty many of whom also access images through the university's subscription to ARTstor, an online repository of over 1,000,000 digital images.
- A computer-music lab for MIDI and other music-based computer software.
- The Aloysius P. Kelley proscenium theatre and the Wien Experimental Black Box theatre in the Regina A. Quick Center for the Arts host frequent student performances presented by the music and theatre programs.
- The Media Center in Xavier Hall contains exceptional equipment and facilities for students in Film, Television, & Media Arts, including an instructional television studio, a production television studio, a satellite uplink truck, and Campus Television Network head-end. Production capabilities are supported by state-of-the-art computer-based digital graphic design and editing technology.
- The PepsiCo Theatre, with its intimate theatre, dance studio, and design studio, is the home of Theatre Fairfield, the production wing of the theatre program.

Internships

Visual and Performing Arts majors are eligible for internship programs in the local and regional art communities. Students may receive credit for gaining valuable practical experience in a variety of activities. Available internships include work at the University's Bellarmine Museum of Art, Thomas J. Walsh Art Gallery, local galleries, museums, historical societies, television and radio stations, art studios, professional theatres, and production companies.

Performance Opportunities

In addition to its regular courses, the Music Program sponsors a number of student performing groups including the Fairfield University Orchestra and Jazz Ensemble. Members of these performing groups receive one credit for each semester. Students may apply up to six of these credits toward a major or minor in music; however, these credits do not count towards the 38 three-credit courses required for graduation. The Fairfield University Glee Club, Chamber Singers, and Pep Band are non-credit performing organizations sponsored by Student Affairs.

Theatre Fairfield is the academic production wing of the Theatre Program. The annual season includes professionally directed and designed productions; performances that feature the work of advanced directing, acting and design students; and independent projects created by junior and senior majors. Participation in Theatre Fairfield productions is open to all members of the University community.

The field of art history provides essential tools for experiencing and understanding humanity's visible achievements. The Art History Program offers an academic curriculum covering the major periods of Western civilization, Asia, the Americas, and Africa, as well as museum studies. Students explore contemporary developments in art and art history within our increasingly global society.

Among the many outstanding resources available to art history students are: internships at the University's Bellarmine Museum of Art; specially arranged visits to major museums in New York and Connecticut with behind-the-scenes tours; internships at regional museums and cultural organizations; and research using the Bellarmine Museum of Art's collection and the Plaster Cast Collection.

Many art history majors choose to enrich their experience further by spending a semester or year abroad. After graduation, the skills learned in Art History are valuable for careers in, museum and gallery curating, education, the non-profit sector, marketing and media, as well as nearly every occupation that requires observation, analysis, and communication.

The Art History Program attracts many motivated and creative undergraduates who demonstrate, through critical analysis and application, their understanding of painting, sculpture, architecture, photography, and applied art. Students who have taken Art History core courses should be able to meet the following learning outcomes:

Demonstrate factual knowledge within the discipline of Art History; apply course material in order to improve critical thinking and problem solve (by making meaning of art, placing art in context, and understanding art as a human endeavor); find and use resources effectively to answer questions and solve problems; generate questions, evaluate research/information, and develop claims using evidence and logical structure; analyze and critically evaluate ideas, arguments and points of view, by synthesizing and discerning what is most important.

Students who have taken upper-level art history seminars should be able to:

Analyze and critically evaluate traditions as systems and constructions of knowledge and power; develop writing and research skills, competencies and points of view necessary in the field of Art History; develop creative capacities in oral and written expression using the full resources of language in invention, drafting, revising, and editing. Students may choose the traditional Art History major, or an Art History major with a concentration in Visual Arts Administration.

Students may choose the traditional Art History major, or an Art History major with a concentration in Visual Arts Administration.

Requirements

Art History Major

For a 30-credit Art History major students:

1. Complete two of the following foundational courses (six credits)

AH 10 Origins and Transformations in Western Art
 AH 11 Visual Culture Since 1400: Expression and Experimentation
 AH 12 Introduction to the Art History of Asia, Africa, and the Americas
 AH 15 History of Architecture

2. Complete two 100-level courses. Students are advised to take courses from a range of time periods and geographical locations. (six credits)

AH 100 Arts of India, China and Japan
 AH 109 Jewish Art: Moses to Modernity
 AH 111 Greek Art and Archaeology
 AH 112 Etruscan and Roman Art and Archaeology
 AH 113 Art and Archaeology of Ancient Egypt
 AH 115 Archaeology of Athens
 AH 120 Medieval Art of Western Europe
 AH 121 Celtic and Early Irish Art
 AH 130 Early Renaissance Art in Italy
 AH 135 Renaissance and Baroque Architecture
 AH 140 Baroque Art
 AH 142 The Art of Early Modern Spain and Latin America
 AH 150 Neoclassical and Romantic Art
 AH 152 Modern Art
 AH 161 American Architecture
 AH 164 American Art: Civil War to Civil Rights
 AH 165 The Black Experience: African- American Art and Criticism in the 20th Century
 AH 172 History of Photography
 AH 175 Contemporary Art
 AH 180 Fundamentals of Architecture
 AH 191 Art and Mythologies of Nazi Germany, Fascist Italy, Bolshevik Russia: Comparative Systems/Outcomes
 AH 192 The History, Theory and Practice of Museums

3. Complete one of the following 200-level courses (three credits)

AH 209 The MMA Plaster Cast Collection at Fairfield University
 AH 210 Myth in Classical Art
 AH 213 The Arts of Egypt: Four Artistic Periods and Cultural Exchange
 AH 221 The Arts of Ireland and the British Isles, 500-1000
 AH 222 Byzantine Art
 AH 282 Green Architecture
 AH 290 Special Topics Seminar
 AH 292 Museums, Art, Ethics and the Law
 AH 295 Museum/Gallery Curating

4. Complete three additional art history courses at the 100, 200, or 300 level (nine credits)

5. Complete junior and senior seminars (six credits)

AH 320 Junior Seminar (fall semester of junior year)
 AH 330 Senior Capstone Seminar (spring semester of senior year)

6. Other courses available to advanced students (only one can be counted toward the Art History Major)

AH 300 Independent Study
 AH 310 Internship

Art History Major With a Concentration in Visual Arts Administration

1. Complete two of the following foundational courses (six credits)
 - AH 10 Origins and Transformations in Western Art
 - AH 11 Visual Culture Since 1400: Expression and Experimentation
 - AH 12 Introduction to the Art History of Asia, Africa, and the Americas
 - AH 15 History of Architecture
2. Complete one art history courses at the 100-level and one at the 200-level (six credits)
3. Complete at least one of the following VPA courses (three credits):
 - AH 192 The History, Theory and Practice of Museums
 - AH 292 Museums, Art, Ethics, and the Law
 - AH 295 Museum/Gallery Curating: Behind the Scenes
4. Complete one of the following Dolan School of Business Courses (three credits):
 - AC 11 Introduction to Financial Accounting
 - MG 101 Introduction to Management in Organizations
 - MG 240 Leading and Managing People
 - MG 335 Entrepreneurship and Small Business Management
 - MG 370 Managing Non-Profit Organizations
 - MK 101 Principles of Marketing
5. Complete EN/W 339 Grant and Proposal Writing (three credits)
6. Complete one Art History internship (three credits)
 - AH 310 Internship
7. Complete junior and senior capstone seminars (six credits)
 - AH 320 Junior Seminar
 - AH 330 Senior Seminar

It is recommended that AE 291 Business Ethics be one of the courses taken for fulfillment of Core area III. Additional courses in area 4 above are recommended as electives

Art History Minor

For an 18-credit Art History minor, students:

1. Complete two of the following introductory courses (six credits)
 - AH 10 Origins and Transformations in Western Art
 - AH 11 Visual Culture Since 1400: Expression and Experimentation
 - AH 12 Introduction to the Art History of Asia, Africa, and the Americas
 - AH 15 History of Architecture
2. Complete four art history courses at the 100-level or higher (12 credits)
(AH 310 may not be used; at least three art history courses must be taken while in residence at Fairfield.)

Course Descriptions

Note:

All courses count for the history/theory credit towards the Visual and Performing Arts component of the University core curriculum.

A=Applied H=History

AH 10 Origins and Transformations in Western Art (H)

From the mysterious depths of Paleolithic cave painting to the soaring heights of Gothic cathedral vaulting, this course surveys the early history of Western art. The course begin with the origins of art-making in prehistoric, Mesopotamian, Egyptian, Greek, and Roman cultures before viewing the transformations of these ancient arts traditions in early Christian and medieval societies. The course offers students a working vocabulary with which to compose visual analyses of works of art and evaluate them in a social and historical context. One class takes place at the Metropolitan Museum of Art in New York City. Three credits.

AH 11 Visual Culture Since 1400: Expression and Experimentation (H)

This course explores the ways in which people use images to record their world. From the development of linear perspective in the early Renaissance to the assimilation of advances in optical sciences in the baroque period and the incorporation of photography in the 19th century, art has responded to technological advances and created distinct and expressive visual cultures. By exploring painting, sculpture, the graphic arts, and architecture, students learn to analyze how the contemporary world is designed and defined by a visual heritage that incorporates historical images into film, television, and advertising. One class takes place at the Metropolitan Museum of Art in New York City. Three credits.

AH 12 Introduction to the Art History of Asia, Africa, and the Americas (H)

This introductory lecture course examines artworks and architecture from each continent to understand the respective traditions of Asia, Africa, and the Americas, emphasizing a selection of examples within a chronological sequence. It studies material culture from each of the three areas using different art historical approaches. India, China, and Japan form the basis for the study of Asia. Cultures designated by their geographical locations provide a frame of study for African Art. Pre-Columbian, Northwest coast, and Native American visual arts represent the Americas. The course emphasizes art collections in New Haven and New York City, and one bus trip during the semester affords students a first-hand experience studying original works of art. This course meets the world diversity requirement. Three credits.

AH 15 History of Architecture (H)

This introductory course surveys the major periods and key monuments in the history of architecture - largely in the West - from antiquity to the present. Topics include Greek and Roman temples and civic architecture; Medieval mosques and cathedrals; Renaissance and Baroque cities and their monuments; Early Modern factories and gardens; Machine Age museums and houses; and contemporary architectural developments of all sorts. Students will work with actual buildings in writing assignments, and learn the skills necessary to critique and interpret the built environment of the past and present in the United States and beyond. Three credits.

AH 100 Arts of India, China, and Japan (H)

This survey of the art and architectural history of three major civilizations in Asia studies sacred and secular material culture in painting, sculpture, and architecture during the formation and development of each civilization, comparing them with their modern achievements. In each instance the scope of history covers at least three millennia. Foci include the Mauryan, Kushan, and Gupta periods in India; the Chou, Han, T'ang, Song, and Ch'ing dynasties in China; and the Nara, Heian, Kamakura, Edo, Tokugawa, and Meiji periods in Japan. The course emphasizes contrasting periods of isolation and open contact between these civilizations and with those in the West and highlights collections of Asian art at Yale University and in New York City during the course and on trips to study these collections. This course meets the world diversity requirement. Three credits.

AH 109 Jewish Art: Moses to Modernity (H)

The earliest known written description of the Jewish people is a visual record on an ancient victory monument. Dated from the 13th century B.C.E., a carved stele dedicated to Pharaoh Merneptah presents a hieroglyphic relief inauspiciously boasting: "Israel is laid waste, his seed is no more." Tracing 4,000 years of Jewish art, culture, and ritual, this course is a panoramic overview of visual expression of a people wandering through six continents, innumerable styles and artistic identities. How did the ineffable theophany at Sinai spark the complexity of Judaism's struggle with Greco-Roman pagan idolatry versus attempts at capturing the "spirit of God with wisdom and discernment and the knowledge of workmanship to design designs" [Exodus 35] transforming spirituality into a living art? Three credits.

AH 111 Greek Art and Archaeology (H)

This survey covers the major developments in architecture, sculpture, and painting from the time of Homer to the collapse of the Hellenistic world. The course considers the formation of the Pan-Hellenic sanctuaries of Olympia and Delphi in the geometric and archaic periods and the rise of democracy under the leadership of Pericles in Athens, culminating in the Parthenon of the high classical period and the creation of an empire under Alexander the Great. Students explore the legacy of Greek achievement in the context of its impact on the Roman world and later art. The course emphasizes objects in area museums and includes field trips. Three credits.

AH 112 Etruscan and Roman Art and Archaeology (H)

This course surveys the art of the Etruscans, predecessors to the Romans on the Italic peninsula, and its impact on the Roman Republic. The course traces the development of Roman art and archaeology from the Republic to the late empire, and from the center of Rome and the achievements of Augustus to the official recognition of Christianity by Constantine the Great. Students consider the influence of the Greek legacy and Roman developments. The course emphasizes objects in area museums and includes field trips. Three credits.

AH 113 Art and Archaeology of Ancient Egypt: Images for Eternity (H)

This course, devoted to the history of ancient Egyptian art from the pre-dynastic period (4200 B.C.E.) to its last manifestation in the time of the Roman occupation (100 C.E.), focuses on major themes, important stylistic movements, and selected masterpieces of Egyptian architecture, sculpture, relief, painting, and minor arts. Students consider the formation of major arts in the pre-dynastic period; great monuments of the Old Kingdom such as Djoser, Khufu, and Khafre pyramid complexes; classical art of the Middle Kingdom with the royal temples, pyramids, and tombs at Lisht and Deir el Bahari; New Kingdom temples at Karnak and Luxor; and the splendor and revolution of Amarna art. The course emphasizes objects in area collections, especially in the Metropolitan Museum of Art. Three credits.

AH 115 The Archaeology of Athens (H)

This course comprises a chronological survey of the physical remains of the ancient city of Athens and the Attic peninsula from the Prehistoric age through the Late Roman period (30,000 B.C. - 6th century A.D.). Recent systematic excavations within the modern city have revealed a substantial amount of new information about ancient Athens, particularly during the Roman period. Students study the growing archaeological record including the results of recent excavations to gain an understanding of the ancient city through material finds. One class on location is scheduled at the Metropolitan Museum of Art. On campus, students study the Metropolitan Museum of Art Cast Collection with particular emphasis on important examples from Athens and Attica during the Greek Archaic and Classical periods, and from the Roman period. Three credits.

AH 120 Medieval Art of Western Europe (H)

This introduction to medieval art and architecture in Western Europe - from its Roman, Jewish, and early Christian sources to the Gothic period - explores continuity and change in art and society, including relationships to Islamic and Byzantine art. Themes of the course include the relationship of belief and ritual to religious imagery and architecture, the impact of imperial and ecclesiastical patronage, and the influence of other cultures on art forms and iconography. The course includes a field trip to the Cloisters Collection in New York City. Three credits.

AH 121 Celtic and Early Irish Art (H)

This course traces Celtic art from its sources and history on the European continent (1200 B.C.E. to the first century C.E.) to its migration to the British Isles and its subsequent transformation as it interacts with native cultures there, particularly the Irish culture. The course examines native Irish art from the stone circles and passage graves of 3000-2000 B.C.E. to the introduction of the Celtic style and continuing through the golden age of Ireland's conversion to Christianity, a development that led to rich new art forms such as illustrated bibles, jeweled chalices and reliquaries, high crosses, and the introduction of monastic and ecclesiastical architecture. The course also discusses the medieval revivals in the 19th and 20th centuries and includes a first-hand examination of Fairfield University's facsimile of the Book of Kells. Three credits.

AH 130 Early Renaissance Art in Italy (H)

Beyond the introductory survey of the major masters and monuments of the early Italian Renaissance, this course offers an in-depth study of several paradigm projects created between 1300 and 1500. With a diverse tool box of practical and art historical methods, we focus on selected artistic initiatives spanning some major monuments and lesser known, but equally intriguing contributions by second-tier artists. Our task is to study key works of Duccio, Giotto, Lorenzetti, Brunelleschi, Alberti, Ghiberti, Donatello, Masaccio, Fra Angelico, Uccello, Castagno, Piero, Ghirlandaio, Botticelli, Mantegna, Giovanni Bellini, Perugino, Leonardo, and juvenile works by Raphael and Michelangelo. Three credits.

AH 135 Renaissance and Baroque Architecture (H)

This survey of the architecture and urbanism of 15th- through early 18th-century Europe and its colonial world addresses topics such as the Renaissance revival of antiquity and its impact on architecture, the changing nature of architectural practice, the role of religious orders like the Jesuits in the dissemination of architectural style and taste, and the importance of illustrated books in advancing theoretical and practical notions about architecture and the city. The course term paper assignment considers the legacy of Renaissance and baroque architecture in the northeastern United States. Three credits.

AH 140 Baroque Art (H)

The 17th century in Europe was marked by profound shifts in politics, religion, and culture, which are reflected in the art produced during then. This course surveys painting, sculpture, architecture, and urbanism of the Baroque era, with a focus on Italy, Spain, and France. Among the themes explored are: the impact of religious reform on the visual arts of Catholic lands; the notion of classicism as an artistic ideal; the role of academies and the market in promoting the arts; the phenomenal output of portraiture and self-portraiture; and the shaping of cities as works of art. Three credits.

AH 142 The Art of Early Modern Spain and Latin America (H)

This course surveys the art and architecture produced in the complex cultural landscape of early modern Spain and Latin America. Students will examine art in the context of Spain's multicultural past and its ever-expanding role in the Mediterranean and Atlantic worlds, as well as exploring the Pre-Columbian art of the Americas. Three credits.

AH 150 Neoclassical and Romantic Art (H)

This survey of art and architecture during the turbulent 18th and 19th centuries in Europe and America includes the neo-classical style favored by Napoleon and Jefferson, the dramatic emotionalism of the Romantic era, the clarity of realist style, and the revolutionary invention of photography. This course is recommended as the basis for studying 20th-century painting. Three credits.

AH 152 Modern Art (H)

This course examines the shifting styles and currents of modern art from the realists Courbet and Manet, and their contemporaries, to the rebellious years of the Impressionists. The course explores the 20th century from the Fauvists' explosion of color to the new spatial-physics of cubism under Picasso, and documents the triumphs and failures of modern civilization in the experimental efforts of the constructivists, Dadaists, surrealists, and abstract expressionists. A principal concern in the course is the question: What is the artist of the 20th century telling us about our world? Three credits.

AH 161 American Architecture (H)

This course examines the art of building in America from pre-Columbian times to the present, including tradition, economics, engineering, and environmental factors influencing its development. Students examine the home, the church, the school, the business center, and the sports complex as reflections of the American way of life, emphasizing the architecture of today. The course develops an understanding of the man-made environment and its special relations to individuals and to society. Three credits.

AH 164 American Art: Civil War to Civil Rights (H)

This course examines the arts and architecture of the early republic introduced in AH 163, expanding into the major movements and masters of American art from the Civil War to the present. In tracing the themes and artistic statements of American artists the course takes special notice of unifying national myths such as the Founding Fathers, Manifest Destiny, America as the new Eden, the frontier from the Rockies to the lunar surface, heroes from Davy Crockett to Superman, and America as utopia. Through the masterpieces of Church, Cole, Homer, Eakins, Sloan, Hopper, Pollock, Rothko, Wyeth, Warhol, and the Downtown art scene, the course answers the question: What is uniquely American about American art? Three credits.

AH 165 The Black Experience: African-American Art and Criticism in the 20th Century (H)

This course explores Black art and culture in the 20th century, focusing on the art works themselves and how these works use Black culture as subject and context. It traces the development of African-American art from the social upheavals and rapid identity transformations of the Civil War Era through World War I, to the emergence of the "New Negro" of the Harlem Renaissance and Jazz Age, to the return of Black folk imagery in Depression and post-Depression art, to the social and political awareness of the Civil Rights era, to the reconsideration of "blackness" explored during the feminist and postmodern decades. The course gives equal consideration throughout to the artistic dialogue including text, criticism, and video. This course meets the U.S. diversity requirement. Three credits.

AH 172 History of Photography (H)

Photography, one of the youngest artistic media, is the medium most evident in and crucial to 20th-century culture. This course traces the history of photography in the 19th and 20th centuries, emphasizing the interplay between the growth of photography as an art form and technological developments of the medium, and the multiple functions photography fills in modern and postmodern culture. The course stresses photographic movements and the work of individual photographers and analyzes the relationship of photography to other art forms. Three credits.

AH 175 Contemporary Art (H)

This course offers a historical, critical, and stylistic analysis of major trends in contemporary art in Europe and the United States such as abstract expressionism, pop art, minimalism, conceptual art, neodada, neo-expressionism, postmodernism, and feminist art, giving special consideration to artist dialogue (text and video) and criticism. The course specifically examines artistic dialogue against the broader cultural, political, social, and philosophical context of the artwork. The course emphasizes objects in area museums. Three credits.

AH 180 Fundamentals of Architecture (H)

This course provides students with an introduction to the study of architecture, urban design, and the built environment through the analysis of architectural form and through consideration of architectural theory. Through a focus on design principals and vocabulary, students will examine the relationship between practice and theory in architecture. The intent of the course is to develop a profound awareness and understanding of the built environment through rigorous analysis, in situ observations, and studio-based investigations. Finally the course considers the challenges, choices, and responsibilities associated with the discipline today. Three credits.

AH 191 Art and Mythologies of Nazi Germany, Fascist Italy, Bolshevik Russia: Comparative Systems/Outcomes (H)

This interdisciplinary approach to the visual Zeitgeist of these major political/national crises in Europe between 1917 and 1945 surveys the visual rhetoric of Nazi Germany, Fascist Italy, and Bolshevik Russia through the widest possible definition of the visual arts. The course includes the traditional fine arts of painting, sculpture, and architecture as well as the mass cultural outlets of film, radio, propaganda posters, and the staging of public events. The class eliminates the distinctions between high and utilitarian mediums of expression; all means of persuasion are fair game. This course allows students to better understand the complexities of these political/nationalist issues; the "window" is the lens provided by the visual arts and mass media. In doing so, students recognize how the symbolic languages of mythology were married to political ideologies and shaped public opinion from the national consciousness. Three credits.

AH 192 The History, Theory and Practice of Museums (H)

This course focuses on the history and theory of museums, their operations and roles in society and the practical application of museum theory. Students will put the rapidly evolving field of museum studies into a meaningful context while simultaneously gaining a clearer understanding of contemporary industry standards and modes of best professional practice. Three credits

AH 209 The Metropolitan Museum of Art Plaster Cast Collection at Fairfield University (H)

Students will study the history of plaster cast collections in Europe and the U.S. including Fairfield's growing collection. Emphasis will be given to the Fairfield collection by conducting research on the plaster casts. Students will assist with museum and website information. Students will clean and apply light restoration to plaster casts in preparation for their display in different areas on campus. Class visits to the Slater Museum, the Institute for Classical Architecture and the Metropolitan Museum of Art will be scheduled. Consultation with curators and sculptors will provide additional guidance to students. (Prerequisite: one 100-level or lower art history course or permission of the instructor) Three credits.

AH 210 Myth in Classical Art (H)

Greek and Roman art serve as a rich depository of Greek mythology with a wide range of representations that evolved across the centuries. As a source of information, classical art sometimes preserves myths that are otherwise unknown in the surviving literature. In some cases visual representations date earlier than an extant literary description or differ in the story details. This course focuses on ancient sources - visual and literary - to study the Olympian gods; the heroes, Perseus, Herakles, Theseus, and Odysseus; the Trojan War; and battles such as the gods and giants, Lapiths and Centaurs, and Amazons and Greeks. The course compares the appearance of certain of these myths on specific monuments during certain periods in the classical world, emphasizing examples in the Metropolitan Museum of Art, the Yale University Art Gallery, and the Metropolitan Museum of Art Cast Collection at Fairfield. (Prerequisite: one 100-level or lower art history course or permission of the instructor) Three credits.

AH 213 The Arts of Egypt: Four Artistic Periods and Cultural Exchange (H)

The course concentrates on four distinct artistic periods in ancient Egyptian art and archaeology and examines the contributions they made to the unique art of this ancient civilization. The four periods are 1) the Middle Kingdom as the cultural apogee, 2) the New Kingdom's Amarna revolution, 3) the Late Period as a renaissance of arts in the 8-6th century B.C., and 4) Egypt under foreign rule in the Libyan, Nubian, Persian, Greek, and Roman Periods. Egyptian art as a cultural form will be situated within the larger context of the Mediterranean region to consider external cultural exchanges and influences. (Prerequisite: one 100-level or lower art history course or permission of the instructor) Three credits.

AH 221 The Arts of Ireland and the British Isles, 500-1000 (H)

This course explores the art and architecture produced in Ireland, Northumbria, and Scotland during the early medieval period, often called the "Golden Age" of insular art. It was an era of rich cultural exchange during which Irish and continental monks were instrumental in the spread of Christianity throughout the British Isles; Irish settled in Scotland; the Anglo-Saxon kingdom was established in England; and Vikings invaded Ireland and Britain. Arts in all media combined pre-Christian Celtic and Germanic traditions with new Christian forms. Irish monasteries throughout the British Isles were centers of production for sumptuous manuscripts such as the Book of Kells and liturgical vessels including the Ardagh Chalice. Monastic architecture and high crosses will also be considered, as well as secular objects such as aristocratic jewelry. (Prerequisite: one 100-level or lower art history course or permission of the instructor) Three credits.

AH 222 Byzantine Art (H)

This course focuses on the art of the medieval Byzantine Empire, a period of strong imperial patronage that saw the rise of Christianity and its associated new forms of art and architecture. The course is organized chronologically, from Byzantine art's late antique Pagan Roman, Early Christian, and Jewish sources in the 2nd and 3rd centuries C.E. to its impact on the development of the arts of Western Europe and Russia in the 15th and 16th centuries. The major themes of the course are: the relationship of belief and ritual to religious imagery and architecture; cultural exchange and influence on art forms and iconography; and the impact of imperial patronage on art and architecture. These themes will also be related to the art of other places and times, including our own. We will explore continuity and change in the content and style of Byzantine Art over time, while constantly being aware of the relationship between art and society. (Prerequisite: one 100-level or lower art history course or permission of the instructor) Three credits.

AH 282 Green Architecture (H)

There has been a recent awareness of the need for an architecture that is sustainable and environmentally friendly. This course will focus on the latest sustainable design principles by studying a wide range of commercial, industrial, and residential "green architecture." It will examine the Leadership in Environmental Engineering and Design (LEED) standards of the U.S. Green Building Council and look at the new aesthetic of Green Architecture. Students will survey work bringing these standards to college campuses across the country and submit a report summarizing their findings that will include recommendations to help make Fairfield University a greener campus. (Prerequisite: one 100-level or lower art history course or permission of the instructor) Three credits.

AH 290 Special Topics Seminar (H)

Students conduct an in-depth study of a specific subject in the history of art. (Prerequisite: one 100-level or lower art history course or permission of the instructor) Three credits.

AH 292 Museums, Art, Ethics and the Law (H)

This course examines the complex legal and ethical issues surrounding the conception, creation, communication, display, reproduction, ownership, transfer, and protection of works of art. The first unit is devoted to defining "art" and discussing artists' rights. The legal and ethical constraints affecting museums, collectors and the art market generally will be covered in the second unit, while the third unit will grapple with the problematic area of cultural property (with particular emphasis on looting, plunder, identity, trade, reparation, restitution and restitution). In each of these three segments, we shall read and discuss relevant case law, as well as a number of commentaries authored by leading experts in the field. (Prerequisite: one 100-level or lower art history course or permission of the instructor) Three credits.

AH 295 Museum/Gallery Curating (H)

This course explores the role of the museum and gallery curator as well as the curator's responsibilities to the object, the museum, and collectors; and federal and corporate funding. The course includes field trips. Three credits.

AH 300 Independent Study (H)

This in-depth exploration of a specific topic in art history involves students in independent research and field study. Open to students with approval of a faculty member and the director of the Art History program. Three credits.

AH 310 Internship (H)(A)

Internships allow students to gain hands-on experience in fields related to art history through supervised work for galleries, museums, auction houses, and other venues. Internships give students experience in a professional environment, help them to identify possible career paths, and give them skills that they do not acquire in the classroom. Students may apply for on-campus internships at the Bellarmine Museum or the Walsh Art Gallery in the Regina A. Quick Center for the Arts, or pursue placement in regional arts institutions. Internships require permission from the Art History program's internship coordinator before registration. Three credits.

AH 320 Junior Seminar (H)

Required of all art history majors in the fall semester of the junior year. The seminar introduces students to the history of the discipline of Art History. Students learn the different methods and approaches art historians use to study works of art, and apply these approaches through discussion and written assignments. Three credits.

AH 330 Senior Capstone Seminar (H)

Required of all art history majors in the spring semester of the senior year, this seminar offers rotating topics that reflect the areas of expertise and research among Fairfield's art history faculty members and culminates in an in-depth research project. Three credits.

Film, Television & Media Arts

Associate Professors

Scalese, S.J.
Mayzik, S.J.

Assistant Professors

Walker-Canton

Visiting Assistant Professor

Haas

Lecturers

Connolly
Dalen
Davis
Evans

The Film, Television & Media Arts Program at Fairfield University seeks to educate students in:

- hands-on production skills and practices used in the film and television industries;
- the historical and intellectual traditions of cinema and television in the United States and around the world;
- critical analysis of media artifacts and their production through academic research and writing;
- finding and developing their creative and critical voices.

Since the Film, Television & Media Arts Program exists within a comprehensive, liberal arts university, its curriculum strikes an appropriate balance between professional-quality film and television production, media history and theory, and analytic research and writing.

The Film, Television & Media Arts major and minor provide a coherent awareness of the aesthetic, artistic, and communicative power of these media by offering courses in theory, history, genres, styles, and structures with hands-on production courses. The program curriculum reflects the convergence of traditional media of film and television into new media of creative possibilities. Students learn the theory, analysis and collaborative practice of all aspects of visual storytelling: writing, moving-image design, producing, directing, cinematography, sound design, digital imaging, and editing.

Students understand the expressive power of these media and experiment with their own creative voices, engaging their imagination and intellect with the tools of these crafts. Many of the program's faculty members come from the ranks of working professionals, ensuring that information transmitted in the classroom is at the cutting edge of the field.

The home of the program is in the University's award-winning Media Center, a 15,000-square-foot facility on the ground floor of Xavier Hall. The Media Center facility consists of two fully equipped television studios and control rooms, two nonlinear editing suites with more than 25 editing bays, three media class and screening rooms, digital-imaging and audio labs, and offices for Media Center personnel and equipment distribution. We have a custom-designed 32-foot Mobile Satellite Uplink Production truck with high definition cameras and a Grass Valley Switcher — for productions of our students and staff. This truck enables Fairfield to produce sports, news, public affairs, and entertainment programs virtually anywhere, with immediate broadcast via satellite to the nation or the world. The Media Center is also home to the student television channel, The HAM Channel, with offices and work areas for their production efforts. Full-time personnel of the Media Center are professional video and digital producers, writers, editors, and design and repair technicians, and many also teach courses within the program.

The Media Center is the home to the Resource Center for Advanced Digital Exploration. RCADE offers a collaborative setting for University students, staff, and faculty to use new media technologies for research, teaching, and imaginative work. It offers a regular schedule of free workshops on digital hardware, including digital still and video cameras, and digital software products such as Photoshop, Illustrator, Dreamweaver, Flash, Final Draft and digital editing with Pro-Tools, Final Cut Pro After Effects and Motion. Students in the Film, Television & Media Arts program are welcome to supplement their course work with RCADE workshops.

Majors are also encouraged to explore the interconnections between this program and other disciplines of studio art, music, theatre, and art history as offered within the Department of Visual and Performing Arts.

The academic major is a good introduction for students interested in continuing as professionals in the film and television industries. Since Fairfield has an excellent reputation and is situated in the greater New York region, many opportunities exist for internships in media production and significant internships are available at the Media Center and in production companies throughout the metropolitan area. After graduation, many students in this program acquire solid entry-level jobs in various media fields or continue to develop their interest through graduate studies.

Requirements

Film, Television & Media Arts For a 39 credit major students must complete the following:

Foundation Sequence (18 Credits):

FTM 10 Introduction to Film, Television & Media Arts
 FTM 11 Lights, Camera, Audio
 FTM 120 Beginning Screenwriting for Film and Television
 FTM 130 Nonlinear Editing for Film and Television
 FTM 131 Introduction to Production

Plus one of these survey history/analysis courses (3 credits):

FTM 101 American Cinema: History and Analysis - OR -
 FTM 102 American Television: History and Analysis

Advanced Sequence (18 Credits):

Complete one of these survey history/analysis courses (3 credits):

FTM 103 World Cinema: Fiction - OR -
 FTM 104 World Cinema: Nonfiction

Complete one history/analysis course at 200- or 300-level (3 credits):

FTM 201 Filmmaker Studies
 FTM 202 Television Studies - *course approval pending*
 FTM 203 Film Theory - *course approval pending*
 FTM 204 African American Cinema
 FTM 205/MU 245 Survey of Film Music - "Hearing the Movies"

**additional 200- or 300-level courses in other departments may satisfy this requirement (see below)*

Complete two electives in applied production, writing, or history/analysis: (6 Credits)

FTM 101 American Cinema: History and Analysis
 FTM 102 American Television: History and Analysis
 FTM 103 World Cinema: Fiction
 FTM 104 World Cinema: Nonfiction
 FTM 105 American Film: Decades (may be taken twice)
 FTM 106 Film Genres (may be taken twice)
 FTM 107 Television Genres (may be taken twice)
 FTM 108 Sports Broadcasting
 FTM 109 Sexual Orientation, Gender Identity and the Movies
 FTM 110 Special Topics in Film, Television, & Media Arts
 FTM 132 Web Design
 FTM 201 Filmmaker Studies (may be taken twice)
 FTM 202 Television Studies (may be taken twice) - *course approval pending*
 FTM 203 Film Theory - *course approval pending*
 FTM 204 African American Cinema
 FTM 205/MU 245 Survey of Film Music - "Hearing the Movies"
 FTM 220 Intermediate Screenwriting for Film and Television (may be taken twice) - *course approval pending*
 FTM 230 Fiction Film Production
 FTM 231 Documentary Production
 FTM 232 Studio Television Production
 FTM 233 Remote Television Production

FTM 234 Directing for Film
FTM 235 Digital Motion Graphics
FTM 236/MU 202 Digital Audio Workstation
FTM 237/TA 231 Acting for the Camera

Complete two senior capstone courses: (6 Credits)

FTM 310 Senior Capstone Seminar I
FTM 311 Senior Capstone Seminar II

Required for majors to satisfy one Social Science core requirement:

CO 130 Media and Society

Complete either fall or spring semester during freshman, sophomore, and junior years: (3 credits)

FTM 90 Production Practicum in Film, Television, & Media Arts (1 credit)

** courses in other departments that satisfy third history/analysis requirement:*

CI 251 New Chinese Cinema (3 Credits)
IT 271 Italian Cinema (3 Credits)
SP 271 Hispanic Film (3 Credits)

Requirements

Film, Television & Media Arts Minor

For a 6-course, 18-credit minor, students must complete the following:

Complete required foundation courses (6 credits):

FTM 10 Introduction to Film, Television, & Media Arts
FTM 120 Beginning Screenwriting for Film and Television

Complete one of the below history/analysis courses (3 credits):

FTM 101 American Cinema: History and Analysis - OR -
FTM 102 American Television: History and Analysis

Complete one applied production course (3 credits)

FTM 11 Lights, Camera, Audio
FTM 130 Nonlinear Editing for Film and Television
FTM 132 Web Design

Complete one additional 100- or 200-level history/analysis course (3 credits)

Complete one 200-level history/analysis, or any production course subject to pre-requisites (3 credits)

Course Descriptions

A=Applied H=History

FTM 10 Introduction to Film, Television, and Media Arts (H)

In this course, students develop creative capacities in the production of visual and audio media through the exploration of design principles as well as the fundamental technology used in their creation. It introduces visual and sound design components through class discussions, lab exercises, and homework assignments using cameras and a variety of computer illustration and editing programs. FTM 10 is the gateway course for majors and minors in the Film, Television & Media Arts Program and satisfies a history requirement for VPA core. Three credits. (Previously NM 10 - Introduction to New Media Arts, Film, Television, and Radio.)

FTM 11 Lights, Camera, Audio (A)

This course introduces and familiarizes students with all the production tools of the Film, Television & Media Arts program, including: cameras; lighting instruments and grip equipment packages; audio equipment, including microphones, audio recorders, mixers, windscreens, etc. Each class consists of two parts—an instruction and discussion of the theoretical elements of the class topics, and a hands-on demonstration of the theory just presented. The course features multiple practicum assignments designed to provide a thorough learning experience and to illustrate camera, lighting and audio theory. This is a required course for all FTM majors and minors, and it is an applied VPA core course. Pre-requisite: FTM 10. Three credits. (Previously NM11 - Lights, Camera, Audio.)

FTM 12 Art and Language of Film (H)

The course provides an overview of film - its special ability to tell stories visually, its history as an art form and as a business, and its technological development. Emphasis is on the personal, expressive, and collaborative nature of filmmaking. Topics include writing, producing, directing, acting, and editing. This course is an elective for FTM majors and minors, and fulfills a history requirement for VPA core. No pre-requisites. Three credits. (Previously FM11 – Art and Language of Film.)

FTM 13 Art and Language of Radio (H)

This course introduces the theoretical, creative, and practical world of radio broadcast and production. The overview traces the development of technology, programming, and radio management and radio's links to theatre, film, and television. Students consider the future of radio, including digital transmission and satellite radio. FTM 13 is a companion to FTM 11, the gateway course for majors and minors in the Film, Television & Media Arts Program. It satisfies a history requirement for VPA core. Formerly listed as RA 11. Three credits.

FTM 90 Production Practicum in Film, Television & Media Arts (A)

Film, Television & Media Arts majors must take this course for at least one semester during each of their freshman, sophomore and junior years. They will participate in a variety of film, television or radio productions beyond those assigned within individual courses, including: regular programs on the Ham Channel or WVOF; independent student films; student TV broadcasts of annual campus events; Media Center productions or broadcasts; or senior capstone projects. Prerequisite: by permission only. One credit; may be taken twice.

FTM 101 American Cinema: History and Analysis (H)

American cinema has evolved from its origins as a technological novelty at the end of the 19th century to become a key component of a multibillion-dollar industry that profoundly influences popular culture in the United States and around the world. This course examines important American films of the past 100 years and the technological, economic, and cultural developments that have influenced their creation, along with the theoretical concepts necessary for their analysis. It satisfies history/analysis requirements for FTM majors and minors, as well VPA core. Three credits. (Previously FM 105 - American Film Survey.)

FTM 102 American Television: History and Analysis (H)

An introduction to the study of television in the United States, this course reviews the historical roots of television content and technology and its relationship to radio and film, and its evolution on the internet and on-demand. Students examine the evolution of the many program types found in broadcast and cable television, explore their narrative conventions, and define criteria for analyzing story, structure, formats, performance, and production values. This course satisfies history/analysis requirements for FTM majors and minors, as well as VPA core. Three credits. (Previously TL 11 - Art and Language of Television.)

FTM 103 World Cinema: Fiction (H)

This survey course explores the historical, political, social and cultural significance of fiction storytelling traditions from World Cinemas. Students will study canonical and independently produced films directed by filmmakers from around the world to deepen their overall understanding of the technological and aesthetic contributions that national cinemas throughout the world have contributed to the filmmaking industry. Major themes to be discussed are tradition vs. modernization, colonialism, religion, cross cultural relationships, class, gender, ethnicity, nationalism, the human condition, hegemony, and displacement. Students will gain factual knowledge and learn to analyze and critically evaluate points of view that may not be their own. Three credits. (Previously FM 103 World Cinemas.)

FTM 104 World Cinema: Nonfiction (H)

This course surveys the historical, political, social and cultural significance of non-fiction (documentary) storytelling traditions in the U.S. and abroad. Students will study canonical and independently produced documentaries directed by domestic and international filmmakers to deepen their overall understanding of the technological and aesthetic contributions that national cinemas have contributed to nonfiction filmmaking. Major themes to be discussed are tradition vs. modernization, colonialism, religion, cross cultural relationships, class, gender, ethnicity, nationalism, the human condition, hegemony, and displacement. Students will gain factual knowledge and learn to analyze and critically evaluate points of view that may not be their own. Three credits. (Previously TL 102 Nonfiction Film and Television.)

FTM 105 American Films: Decades (H)

This course examines the use of film form (e.g., cinematography, editing, sound design) in American movies made during a given 10-year period, as well as the social, cultural, historical and ideological contexts of the era in which they were made. Each iteration of the course is organized around particular themes relevant to the decade under discussion (e.g., “1970s - Rebels with Causes”). It satisfies an elective for FTM majors, a history/analysis requirement for minors, and a history requirement for VPA core. Three credits; may be taken twice. (Previously FM 102 - American Film: Decades.)

FTM 106 Film Genres (H)

Genres are categories of film characterized by recognizable conventions that include settings, stock characters, narrative patterns, stylistic devices, historical contexts, and themes. Genres interact with filmmakers’ and audiences’ shared expectations, and evolve over time. Each iteration of this course examines a specific genre (e.g., the Western, Horror, Science Fiction, etc.) and evaluates it in terms of film form and its own evolving set of conventions. It satisfies an elective for FTM majors, a history/analysis requirement for minors, and a history requirement for VPA core. Three credits; may be taken twice. (Previously FM 200 - Film Genres.)

FTM 107 Television Genres (H)

Basic to understanding television as an art form is the concept of genre. This course introduces students to the defining characteristics and the critical analysis of television genre. On a rotating basis, the course focuses on drama, serial, situation comedy, news and documentary, and reality television, examining distinct conception, writing, production, directing, editing and other conventions of each. Social and historical elements of the genre are also addressed. This course may be taken twice, is an elective history/analysis course for majors and minors in the FTM program, and fulfills a history VPA core requirement. Three credits. No prerequisites.

FTM 108 Sports Broadcasting (A)

This course introduces students to the principles and practice of the world of sports broadcasting. Topics include the history of the industry, its developing techniques, the aesthetic and narrative structure of television sportscasting, its economic impact on the industry, media law and ethics applied to the sports world, and its significant place within the general broadcast world. This course satisfies an elective for FTM majors, a history/analysis requirement for minors, and a history requirement for VPA core. Three credits. (Previously TL 104 - Sports Broadcasting.)

FTM 109 Sexual Orientation, Gender Identity and the Movies (H)

This course examines how American movies have portrayed gender and queer sexuality—lesbian, gay, bisexual, transgender/transsexual, and questioning—to create a range of stereotypical and multi-dimensional characters. From “coded” sexual references in classical films, to timid New Hollywood-era films, to today’s thriving independent cinema, this representational genealogy includes condescending myth and bold truth-telling, works that both mirror and shape their cultural moment. This course satisfies an elective for majors and a history/analysis requirement for minors in the Film, Television & Media Arts Program, and a history requirement for VPA core. Three credits. No pre-requisites.

FTM 110 Special Topics in Film, Television & Media Arts (H)

These courses, offered periodically, focus in depth on a specific theme or issue, and may draw upon films from one or more countries, from among numerous directors, and from various periods in film history from the dawn of cinema to the present. Special applied courses may also be offered in this category. It satisfies an elective for FTM majors, a history/analysis requirement for minors, and a history requirement for VPA core. Three credits; may be taken twice.

FTM 120 Beginning Screenwriting for Film and Television (A)

This beginning course introduces students to screenwriting by developing their understanding of visual storytelling for short documentary films, fiction films, and the television sitcom. The main goal of the course is to develop creative capacities in storytelling and creative written expression while introducing students to fundamental principles of conventional fiction and non-fiction screenwriting. This course utilizes lecture, discussion, screenings, readings, and reflective essay writing to grapple with issues of narrative structure, characterization, conflict, aesthetics, and the politics and ethics of writing as well as other related topics. Students will participate in regular writing workshops in which fellow classmates will respond to their work. Three credits. (Previously FM 120 Beginning Screenwriting for Film and Television.)

FTM 131 Introduction to Production (A)

This course introduces FTM majors to the major elements and principles of film, television and media production, and its three stages of preproduction, production, and post-production. Each student authors and collaboratively produces short narrative, documentary, and experimental pieces on a common theme. This is a required course for all FTM majors and minors, and it is an applied VPA core course. Pre-requisites: FTM 10 and FTM 11. Three credits. (Previously FM 130 – Filmmaking I.)

FTM 132 Web Design (A)

This course teaches students to understand and analyze current digital culture in order to develop the fundamental concepts and skills essential to designing professional websites. Students explore how information architecture and graphic design theories apply to the web medium, and learn how to use appropriate software to integrate audio, video and animation into the web medium. The course culminates with the creation of an original website that addresses a current social or environmental issue. It satisfies an elective for FTM majors, a production requirement for FTM minors, and applied VPA core. Pre-requisite: FTM 10. Three credits.

FTM 133 Radio Production (A)

In this introductory radio production course, students learn writing, editing, reporting, and production of radio news in studio and field, and produce air-quality newscasts, enterprise reports, and documentaries. This course counts as a production requirement for the Film, Television & Media Arts major/minor. This course satisfies elective requirements for FTM majors and minors. Prerequisite: FTM 13 or by permission of instructor. Three credits.

FTM 201 Filmmaker Studies (H)

Each semester that it is offered, this course takes up the study of one or more individual filmmakers - primarily directors - and surveys that person's (or pairs' or group's) body of work, examining major themes, techniques, motifs, topics, collaborations. In so doing, it seeks to measure and evaluate his or her contribution to the history and craft of film. Filmmakers have included Alfred Hitchcock, Clint Eastwood, Quentin Tarantino, Women Directors, and Ang Lee. It satisfies an elective for FTM majors, a history/analysis requirement for minors, and a history requirement for VPA core. Three credits; may be taken twice. (Previously FM 102.)

FTM 204 African American Cinema (H)

This course explores the historical, social and cultural significance of African American cinema from the silent era until present-day. Students will grapple with issues concerning the politics of representation of people of African descent in the American film industry and deepen their overall understanding of ways that African American filmmakers have achieved artistry and expression in spite of obstacles posed by race, class, and gender. Through regular screenings, readings, and presentations students will deepen their overall understanding of the impact of historical events and key filmic technological advancements on the establishment of the separate and unequal African American film industry. Three credits. (Previously FM 104 African American Cinema.)

FTM 205/MU 245 Survey of Film Music - "Hearing the Movies" (H)

This course provides an overview of film music from 1900 to today. Students investigate the defining characteristics of the major historical periods of film music; explore the social and historical events that shaped the industry; learn to actively listen to a score; and discuss salient features of a given score. The object in this course is to develop skills in analyzing the sound track, music's role in the sound track, and the relation of sound track and image track on small-scale and large-scale (narrative) levels. The course develops critical listening and viewing skills as well as a film-music historical survey. It satisfies an elective for FTM majors, a history/analysis requirement for minors, and a history requirement for VPA core. Prerequisites: MU 103 or MU 104 or FTM 10. Three credits.

FTM 230 Fiction Film Production (A)

This advanced motion picture production course focuses on the production of narrative fiction films. Students study and practice advanced techniques of film production-- including preproduction, production and postproduction responsibilities of the producer relating to management, financing, contracts, distribution and other business elements of filmmaking. Students in the class collaborate to produce significantly more complex narrative films with more advanced camera, lighting, audio, and editing equipment. This course is an elective for FTM majors and minors. Pre-requisite: FTM 10, FTM 11, FTM 131. Three credits. (Previously FM 230 – Filmmaking II.)

FTM 231 Documentary Production (A)

This course is designed to develop skills and critical perspectives needed to produce documentary work that promote social activism and awareness. Through lectures, discussions, screenings, readings, and hands-on demonstrations, students will learn about pre-production, production, and post-production for documentary work. By the end of the semester students will write, produce, direct, and edit short documentaries focusing on social issues. By periodically presenting their own work, students will engage one another in discussions sharing constructive criticism concerning individual projects. Pre-requisites: FTM 131 Introduction to Production or FTM 232 Studio Television Production or by permission of the instructor. Three credits. (Previously TL 232 Documentary Production.)

FTM 232 Studio Television Production (A)

This course offers a theoretical and hands-on introduction to the art and technology of television production within a studio context. Students receive instruction on the creative and aesthetic use of the elements and technology of studio television production - cameras, audio, lighting, editing, set design, and program development - and participate in a series of projects completed individually and as part of a team. This course satisfies elective requirements for FTM majors and minors. Pre-requisites: FTM 10, FTM 11, and FTM 131, or by approval of instructor. Three credits. (Previously TL 130 - Studio Television Production.)

FTM 233 Remote Television Production (A)

This course offers a theoretical and hands-on exploration of the art and technology of television production beyond the confines of a TV studio, also known as "electronic field production" or EFP. Besides in-class demonstrations, lectures, screenings and discussions, students engage in a series of assignments that build skills in producing and directing videos and programs for the internet, campus channels and broadcast television. This course satisfies an elective requirement for FTM majors and minors. Pre-requisites: FTM 10, FTM 11, and FTM 131, or by approval of instructor. Three credits. (Previously TL 230 - Remote Television Production.)

FTM 234 Directing for Film (A)

This course explores what a film director does, how he/she manipulates and manages the divergent elements of cinema into a coherent whole, and often, into a unique and personal vision. The specific tasks of a director related to her/his role with crew and with actors, and in the development of a film from start to finish, are studied from practical and theoretical perspectives. This course is an elective for FTM majors and minors. Pre-requisite: FTM 10, FTM 11, FTM 131. Three credits. (Previously FM 132 – Directing for Film and Television.)

FTM 235 Digital Motion Graphics (A)

The digital revolution has arrived for production of television and video. This course introduces the theory and basics of digital graphic design and editing, incorporating three-dimensional graphics, music, and sound effects. Students master nonlinear programs and technology such as Final Cut Pro, Avid, Photoshop, Flash, and Dreamweaver. This is an elective applied course in the television concentration of the Film, Television & Media Arts. It satisfies an elective for FTM majors, a production requirement for FTM minors, and applied VPA core. Pre-requisite: FTM 10. Three credits. (Previously TL 131.)

FTM 236/MU 202 Digital Audio Workstation (A)

This course will provide the student with an in-depth knowledge of the practical application of the Digital Audio Workstation (DAW). This course is primarily designed for students interested in audio editing as it applies to producing recordings, creating sound effects, and soundtrack design for film/TV/radio. Creating samples, recording techniques, waveform manipulation, mixing, and the role of the Digital Audio Workstation in the overall process of sound design will be explored. Students will be proficient at using Logic Pro audio software to manipulate MIDI and audio. Students will learn how to record live sound effects from the environment and manipulate the recordings to create Foley sound effects, and apply them to a film segment. Students will learn to mix and master a segment of multi-track audio. This course satisfies elective requirements for FTM majors and minors. Prerequisites: MU 150, MU 156, or MU 158; or FTM 11 and FTM 130; or by permission of instructor. Three credits.

FTM 237/TA 231 Acting for the Camera (A)

This course is an experiential introduction to the specialized techniques used in successful on-camera acting. On-camera exercises will emphasize the importance of listening, truthful moment-to-moment response, and effective communication skills. Students will practice their skills and apply their training to commercials, current television scripts, and screenplays. Initial classes examine the difference between acting for the stage and acting for the camera. Students will practice a variety of on-camera styles including comedy, crime drama, and commercials. The course builds towards longer scene work from a screenplay. Topics include script analysis, nuance and depth of performance, and relaxation and confidence on-camera. This course satisfies elective requirements for FTM majors and minors. Prerequisite: TA 30 or by permission of instructor. Three credits.

FTM 305 Independent Study in Film, Television & Media Arts (A/H)

Usually open only to students majoring or minoring in Film, Television & Media Arts with a concentration in film, this course allows a student to pursue in depth a topic or project in film or television or media arts history/theory or production, in close consultation with a faculty member of the Film, Television & Media Arts program. Prerequisite: by permission of instructor only. Three credits; may be taken twice.

FTM 306 Internship in Film, Television & Media Arts (A/H)

In consultation with a faculty member, upper-level major and minor students arrange a semester-long internship with one of many film production companies located within Connecticut and the New York metropolitan area. The course combines on-site supervision and meetings with faculty advisors with weekly journal submissions and an assigned paper at the end of the internship. This is an elective applied course for majors in the Film, Television & Media Arts program. Prerequisite: by permission of instructor only. Three credits; may be taken twice.

FTM 310 Senior Capstone Seminar (A/H)

This course provides an opportunity for Film, Television & Media Arts majors in their senior year to produce a creative work that pulls together the theoretical concepts and technical skills they have acquired during their years in the Program. This course is required for all Film, Television & Media Arts majors, who must take it in the fall semester of their senior year. The capstone project is completed in FTM 311 in the spring semester of a major's senior year. Prerequisites: required production courses for FTM major in addition to senior year status. Three credits.

Rabin

Music allows for analytic, critical, and speculative humanistic inquiry, but is built on a foundation of mathematics and science. It allows creativity and personal interpretation and requires a rigorous understanding of syntax and abstract reasoning; it provides insight into culture and history and relates to and illuminates what is happening here and now; it is a language by which we can communicate with one another and is an art that expresses what words cannot.

As one of the original seven liberal arts, music maintains a place in the university as a subject of broad and passionate interest to educators, historians, performers, composers, and theorists, as well as those interested in arts management, recording, music industry, and the interaction of music with other arts such as film and theatre. At Fairfield, all of these form a community dedicated to furthering a knowledge and love of music. We not only want students to understand, evaluate, and analyze music, but also want to make music a meaningful part of their life. We want students to find the passion in music and to actively engage with the issues and the contexts surrounding, impacting, and influencing music.

The study of music is not just about preserving knowledge of the past - it is a field of study that provides forums for debate and action, and also delivers content that gives context to learning.

The goals of the Music program are to:

- offer students a variety of opportunities to develop musical skills and knowledge
- acquaint students with the growing scope and substance of musical thought and practice
- advance the historical, theoretical, and critical study of music
- equip students with technical, cognitive, and creative skills that will enable them to use their knowledge effectively in any field or discipline
- foster students' understanding of both the creative process in music and the products of musical creation
- develop the ability to write critically and analytically, and express a well-developed opinion both orally and in writing
- provide students the knowledge and modes of inquiry characteristic of other disciplines
- cultivate in students the desire for continued musical and intellectual growth throughout their lives

Music Major

Courses are grouped into three categories: American, Experiential, and European. All majors must take:

- at least two courses from each category and one of these must be at the 200-level*
- at least one course at the 300-level course
- at least one course must emphasize pre-20th century music.
- the remaining credits to complete a 30-credit major may be fulfilled with a combination of:
 - internship,
 - independent study,
 - additional course(s) from any of the three areas
 - performing credits (no more than 6 performing credits may count towards the major, but a student may accumulate more than 6 credits.)

Music Major with a Minor in K-12 Music Education

Students majoring in music may also minor in K-12 music education (see catalog entry for Program in Education). Please contact Dr. Laura Nash or the chair of the Educational Studies and Teacher Preparation Department in GSEAP for additional information about becoming certified in music education. In addition to required ED courses and student teaching, the following Music Courses are required: MU 360, MU 361, MU 362, and MU 363.

Qualified students minoring or majoring in music are given preferred admission status in the graduate education programs and are warmly invited to consult about options with their advisors and with the chair of the Educational Studies and Teacher Preparation Department in GSEAP about this opportunity.

Music Minor

The Music Minor is 18 credits, six of which may come from performance credits (lessons or ensembles). In addition, students must take one history and one applied course, as well as 2-4 elective courses, chosen in consultation with the faculty.

Performing Ensembles

For information about performance ensembles, students are encouraged to contact either Dr. Nash or Prof. Torff.

Applied Music Lessons

The department provides private lesson instruction for all interested students and University members in most areas of music performance. Instruction carries an extra charge beyond tuition and includes 10 private lessons per semester. Students may enroll for 45-minute lessons and earn 1 credit or one-hour lessons and earn 2 credits. Lesson times are arranged individually with the instructor.

These credits do not count towards the 38 three-credit courses required for graduation, but six may be counted towards the music major or minor. Students interested in registering for lessons must do so before the end of the Add/Drop period as identified on the University Academic Calendar. More information and registration forms are available from the Department Coordinator in Canisius Hall, Room 3. For more information, please contact Dr. Laura Nash.

Lesson fees for the 2013-2014 academic year are:

Ten - one-hour lessons: \$575 (two credits)

Ten - 45-minute lessons: \$500 (one credit)

Course Descriptions

A=Applied H=History

AMERICAN

MU 101 The History of Jazz (H)

This course traces the development of American jazz from its origins in African-American musical traditions. Students examine the roots of jazz in ragtime, blues, work songs, and march music and study the development of different jazz styles such as Dixieland in the '20s, swing in the '30s, bop in the '40s, and continuing to the present. The course emphasizes the connection between historical periods and the music of jazz - America's original art music. This course meets the U.S. diversity requirement. Three credits.

MU 102 The History and Development of Rock (H)

This course surveys the musical and social trends that resulted in the emergence of rock and roll as an important musical and cultural force in America. The course traces the roots of rock, blues, and country styles, showing how they merged with popular music. Students examine periods from the 1950s to the present, along with Elvis Presley, Chuck Berry, Little Richard, the Beatles, the British invasion, folk music, Bob Dylan, jazz and art rock, Jimi Hendrix, the west coast movement, and the music industry. Students learn to understand, discuss, and differentiate between stylistic periods and their historical relevance to American culture. Three credits.

MU 111 The Lives and Music of Gershwin, Ellington, and Porter (H)

This course focuses on the life and music of three of America's greatest composers, Duke Ellington, George Gershwin, and Cole Porter. These three composers defined American music, both through popular song and serious music. Their work was heard on radio, in dance halls, on Broadway, in films, and at concert halls, providing an important context for understanding mid-20th century America. This course studies the life and music of these composers through readings, movies, listening, and class discussion. Three credits.

MU 112 The Music of Black Americans (H)

This musical and historical survey of African-American music and its important contributions to American culture examines African heritage, slave songs, and the colonial era, followed by the role of African-Americans in the music and culture of the Revolutionary and Civil War periods. Students examine the evolution of spirituals, minstrel songs, and ragtime as they relate to dance forms; the role of African-Americans as performers and composers in classical music and music of the theatre; and the blues as it evolves into jazz, soul, reggae, funk, disco, and rap. This course takes a look at racism and issues of gender in America, and how musicians of diverse backgrounds have collaborated and contributed to the evolution of American music despite prejudice and adversity. This course meets the U.S. diversity requirement. Three credits.

MU 120 The History of American Song (H)

This course examines the history of our most popular form of American music - the song. It explores the origins of song, the impact of immigrants, war, women, and political agendas on the development of this genre, as well as popular American songwriters, singers, and styles. Through critical analysis, we will see the patterns that shaped the music of today. Three credits.

MU 132 Critical Issues in American Popular Music: Blues to Hip Hop (H)

This course provides an in-depth look at the important musical, social, and racial issues in American popular music, from the media exploitation of the blues in the 1920s through current issues in hip hop. Subject areas will include blues and its origins, jazz and modernism, the obstacles of race in music, the death of rhythm and blues, rock's evolution in the '50s, rap and hip hop culture, and issues in both postmodernism and perverse as seen by many music and art critics. (Prerequisite: MU 101, MU 102, or MU 112) *This course meets the U.S. diversity requirement.* Three credits.

MU 200 Special Topics (H)

Students will undertake an in-depth study of a specific problem, period, composer, performer or style of performing, creating, or responding to music. The course will be conducted by a leading scholar/practitioner in the field. The course may be repeated with permission of the program director. Prerequisites: one introductory or 100-level music class, or permission of the instructor.

MU 245/FTM 205 Survey of Film Music - "Hearing the Movies" (H)

This course provides an overview of film music from 1900 to today. Students investigate the defining characteristics of the major historical periods of film music; explore the social and historical events that shaped the industry; learn to actively listen to a score; and discuss salient features of a given score. The object in this course is to develop skills in analyzing the sound track, music's role in the sound track, and the relation of sound track and image track on small-scale and large-scale (narrative) levels. The course develops critical listening and viewing skills as well as a film-music historical survey. (Prerequisite: MU 103 or MU 104 or FTM 10) Three credits.

EUROPEAN

MU 103 History of Music, 400-1700 (H)

From the humble beginnings of prayer set to chant, through the golden age of polyphony, to the masters of the baroque, this course surveys the origin of western art music. Students learn the basic elements of music and chart the evolution of these elements through the centuries. Students also learn about the cultural and intellectual environment that gave birth to different music genres and styles. Three credits.

MU 104 History of Music, 1700-1964 (H)

This course explores the ways in which composers manipulated musical language to meet the growing demands of the middle class. After learning the basic elements of music, students explore the world of the Enlightenment and Haydn, Mozart, and Beethoven. In the romantic period, the course explores the interaction of all the arts and the influence of politics and economics on compositional style. With the dawn of the 20th century, the course explores what "modern" means, learns about attempts to expand and replace musical language, and studies the impact of American culture on music. Three credits

MU 124 Bach and Beethoven (H)

This course examines the lives and music of two masters. The first half of the course explores the great secular and religious music of Johann Sebastian Bach, the last great exponent of baroque style. The second half of the course investigates the life and works of Ludwig von Beethoven, the composer who, more than any other, represents the struggle for artistic truth. Three credits.

MU 126 History of Choral Music (H)

From Palestrina's masses to Verdi's Requiem, this course explores the history of music through choral music. The composers themselves often considered these masterpieces to be the culmination of their compositional development and work. A basic ability to read music is helpful. Three credits.

MU 200 Special Topics (H)

Students will undertake an in-depth study of a specific problem, period, composer, performer or style of performing, creating, or responding to music. The course will be conducted by a leading scholar/practitioner in the field. The course may be repeated with permission of the program director. Prerequisites: one introductory or 100-level music class, or permission of the instructor.

MU 242 Music of the Classical Era (H)

During the classical era (about 1750 to 1830), music shifted from an aristocratic concern to the favorite popular art of the middle class. The course examines the lives and music of the three most important composers of this period: Haydn, Mozart, and Beethoven. Three credits.

MU 243 19th-Century Romanticism in Music (H)

This comprehensive survey of 19th-century romanticism in music considers the music of Beethoven, Chopin, Verdi, and Wagner, among others. The music of the romantic era contains some of the richest masterpieces in music history. The course considers the relationship between music and the other arts. Three credits.

MU 244 Music of the 20th Century (H)

This introduction to the mainstreams of music of our time begins with Debussy, Ravel, and the French moderns. After investigating the music of Stravinsky, Bartók, and other European composers, the course concludes with such modern trends as electronic music, film music, jazz, and popular music. Three credits.

EXPERIENTIAL**MU 113 Introduction to Piano and the Elements of Music (A)**

This lab performance class enables students to learn the piano keyboard, basic note-reading, and important fundamental musical concepts. No prior piano experience is required. Students gain an understanding of music in the areas of melody, rhythm, harmony, and form. Keyboard skills, technique, and performance of folk songs, simple classical pieces, blues, boogie-woogie, ragtime, and popular music are covered. Three credits.

MU 122 World Music History and Ensemble (H)

The course includes a survey and hands-on instrumental experimentation with world music including African, Brazilian, African-American, Native American, Latin American, Indian, and South Asian styles. Students attend a formal lecture and a practice or performance session each week. During the latter session, students learn to play (primarily African) percussion instruments, coming to view them as the first building blocks of much larger units of ethnic, folk, traditional, or popular ensembles. The course raises student awareness of corresponding songs and traditions; links history, tradition, music, and culture; and introduces students to the contribution of a wide range of cultures to the music world and to the widespread belief that music is a universal language. Students perform as a class or an ensemble on set show-and-tell occasions that may be open to invited guests and/or the University community. No previous musical experience is required. This course meets the world diversity requirement. Three credits.

MU 150 Music Theory and Composition I (A)

This course introduces students to the basic concepts of music theory and beginning compositional skills. Starting with the notation of pitch and rhythm, the course investigates the major/minor key system, intervals, chord construction, melody writing, and rudimentary harmonization. No background in music is expected. Three credits.

MU 155 Popular Music Theory and Composition (A)

This course, designed for majors and minors in jazz performance, gives students a working knowledge of jazz and pop harmony. Students attain keyboard proficiency through an emphasis on ear-training, voicings, tritone substitutions, and improvisation theory; this proficiency can be used on other instruments. Students learn all upper-structure chords in all keys as well as ways to improvise on various chord structures. Students should be able to play through lead sheet material with reasonable proficiency using jazz voicings and voice-leading techniques. Basic knowledge of the keyboard is recommended, but the course is open to all instrumentalists and vocalists. (Prerequisite: permission of the instructor) Three credits.

MU 156 Intro to Music Technology: History and Practice (A)

This course provides students with an introduction to the use of musical instrument digital interface and its various formats. Participants study principles of MIDI, the use of computers in music, and music software as it applies to composition, arranging, sequencing, and music notation, examining how these formats enhance the performance of music and music production. Students learn the technology used in pop music, soundtracks, and commercial music. This course requires a basic knowledge of music and is open to students with some musical background. Three credits.

MU 157 Introduction to the Music Industry (A)

This course introduces students to the various aspects of the music industry. Students discuss the history and process behind the creation, manufacture, and distribution of prerecorded music. The course covers the earliest record companies, changes in the technology, and the growing awareness and sophistication of the consumer and the artists, as well as the function of managers, attorneys, musicians, and agents in the music industry. Three credits.

MU 202/FTM 236 Digital Audio Workstation (A)

This course will provide the student with an in-depth knowledge of the practical application of the Digital Audio Workstation (DAW). This course is primarily designed for students interested in audio editing as it applies to producing recordings, creating sound effects, and soundtrack design for film/TV/radio. Creating samples, recording techniques, waveform manipulation, mixing, and the role of the Digital Audio Workstation in the overall process of sound design will be explored. Students will be proficient at using Logic Pro audio software to manipulate MIDI and audio. Students will learn how to record live sound effects from the environment and manipulate the recordings to create Foley sound effects, and apply them to a film segment. Students will learn to mix and master a segment of multi-track audio. (Prerequisites: MU 150, MU 156, or MU 158; or FTM 11 and FTM 130; or by permission of instructor) Three credits.

MU 250 Music Theory and Composition II (A)

In this continuation of MU 150 students build a theoretical and compositional foundation by studying 7th chords, part-writing, harmonic progressions, and chromatic harmony. In addition, students compose original melodies and learn how to harmonize them, and undertake simple analysis projects to further understand how music is put together. (Prerequisite: MU 150 or permission of instructor) Three credits.

300-level Courses

MU 300 Independent Study in Music (H)(A)

By arrangement with music faculty, students work independently on special topics within the field of music. Open to music majors and minors only. (Prerequisite: permission of music faculty) Three credits.

MU 301 Independent Study in Music Theory (A)

By arrangement with music faculty, students continue the work of MU 250 with an advanced study of music theory and composition. This course may be taken more than once. Open to music majors and minors only. (Prerequisite: permission of music faculty) Three credits.

MU 305 Internships (A)

Internships are available in a number of organizations. Students receive semester credit in exchange for working a minimum of 10 hours per week. Students may count no more than six credits towards a major, and no more than three credits towards a minor. Open to music majors and minors only. (Prerequisite: permission of music faculty) Three credits.

MU 306 Performing Arts Administration Principles and Practices

This course explores the fundamental principles associated with not-for-profit performing arts organizations. This course is for all arts students, as the study of arts administration core principles sets a foundation of essential knowledge vital for employment within a non-profit arts organization. Such training also is for practicing artists and those with for-profit intentions. Students will come away with knowledge and skills, as well as a strong self-awareness of their leadership and management capacities. (Prerequisite: At least 2 VPA courses in Music or Theatre). Three Credits.

MU 310-311 Senior Capstone Project

The capstone project provides opportunities for majors to work at a very high level, reflecting their expertise and ongoing research. (Prerequisite: permission of music faculty) Three credits per semester.

Music Education

MU 360 Elementary General Music Methods (A)

This course is a multi-faceted exposure to teaching general music in an elementary school. It includes a review of major concepts and philosophies of music education, and exposure to a variety of materials including singing, playing, movement, and literacy activities. Students research issues through professional journals and textbooks; understand the content and construction of the classroom; plan and implement mini-lessons; discuss the musical behavior, development, and ability of children; demonstrate a knowledge of classroom management techniques; articulate a rationale for music education in the K-5 environment; and discuss major topics and issues presented throughout the semester. Onsite fieldwork at a nearby elementary school is scheduled. (Prerequisites: MU 104 and MU 150 or permission of instructor) Three credits.

MU 361 Choral Conducting Methods (A)

This course explores teaching vocal/choral music at the elementary, middle, and high school levels. It is a comprehensive study of the skills, knowledge, materials, and techniques required for the effective instruction of choral music. The major units of study include history and philosophy, vocal principles and practice, choral principles and practice, principles and practice relating to children and education, artistic musical conducting, and choral management and organization. Onsite fieldwork at nearby public schools is scheduled. (Prerequisites: MU 104 and MU 150 or permission of the instructor) Three credits.

MU 362 Secondary Instrumental Methods (A)

This course is a multi-faceted exposure to teaching instrumental music at the middle and high school levels. It is a comprehensive study of the skills, knowledge, materials and techniques required for the effective instruction of instrumental music. The major units of study include creating instructional plans based, systematic analysis of the performance of individuals and ensembles, assessment techniques, rehearsal skills, conducting, and a global understanding of how instrumental music fits into the profession of music education. Onsite fieldwork at nearby public schools is scheduled. (Prerequisites: MU 104 and MU 150 or permission of the instructor) Three credits.

MU 363 Music Technology for Music Educators (A)

This course is a multi-faceted exposure to teaching music with and through technology. It is a comprehensive study of the skills, knowledge, materials, and techniques required for the effective integration of technology in a music classroom: hardware, notation software, recording software/techniques, and music theory software. The major units of study include creating instructional plans, assessment techniques, notation skills, recording skills, and a global understanding of how technology fits into the profession of music education. Onsite fieldwork at nearby public schools is scheduled. (Prerequisites: MU 104 and MU 150 or permission of the instructor) Three credits.

Performance Ensembles**MU 255 Symphony Orchestra (A)**

This ensemble helps instrumental musicians develop their skills further through public concert performances. Students learn ensemble performance ethics and stylistic interpretation, as well as performing pieces from a wide variety of genres and time periods. This course may be taken repeatedly. (Prerequisite: orchestra or symphonic band performance experience) One credit.

MU 256 Jazz Ensemble (A)

Jazz Ensemble is open to musicians who wish to develop their skills in jazz performance. Students rehearse and receive instruction in performing and improvising in different styles of jazz, from swing to fusion. This course may be taken repeatedly. (Prerequisites: instrumental or vocal performance experience; selection through audition) One credit.

Studio Art

Faculty Professor

Yarrington

Associate Professor

Chamlin, Program Director

Lecturers

Belanger

Ford

Mendelsohn

The Visual Arts broaden an awareness of the self, society and culture by communicating fundamental ideas and images. The Studio Art program is committed to teaching students to develop a visual language and working methodology based on skills, knowledge, technique and the integration of historical, personal and cultural artistic values. The faculty is dedicated to mentoring students of all levels, encouraging them to build on their innate talents and discover a personal vision. By developing a creative process as a means of giving form to their experience, students can search for what is true and challenge unexamined ideas through practice, experimentation, and by problem solving.

At the Foundation Level, the program is committed to teaching students to work with the core visual elements of composition, perception, abstraction, and concept while introducing students to a range of 2D and 3D materials. A strong foundation allows students to interpret and conceptualize their ideas before moving into Painting, Printmaking, Photography, Sculpture, Installation, Sited work and Interdisciplinary projects. The faculty is comprised of artists, as it is the belief of the program that students benefit from working with practitioners actively engaged in the discipline. Along with intellectual rigor, the ability to empathize and develop a visual vocabulary as students create and review work is emphasized; sensitivity for the visual arts throughout cultures is supported as students deepen their understanding for their own work, and that of others.

The Studio Art Program' goals include:

- Developing intuitive, creative, expressive, and aesthetic faculties, and the ability to connect these with reasoning skills
- Developing perceptual, critical, and conceptual skills
- Cultivating empathy, sensibility, and discernment
- Training and disciplining oneself to express individual form, style, and meaning
- Developing knowledge of major artistic achievements in Western and non-Western visual arts
- Communicating critical observations clearly, concisely, and with sensitivity, in written and oral forms
- Cultivating a deep commitment to and curiosity for the intellectual and creative life
- Encouraging students to take advantage of the world-class museums in Connecticut and New York City

The Studio Art Program is divided into three developmental areas: foundation studios, advanced studios, and capstone studios.

The foundation studios are recommended as a basis for all other studio art courses. They develop formal, technical, expressive, and problem-solving skills. They stress knowledge of modern and contemporary art and provide a survey of artistic disciplines. Through these courses, students begin to investigate visual thinking.

The advanced studios build upon the foundation studios and focus on a particular discipline, such as painting, photography, and sculpture. Students develop a formal vocabulary, visual sensitivity, and manual dexterity. Materials and historical concerns are integral parts of directed and individual investigations.

In the capstone studios, students further develop the diverse experiences and knowledge they have acquired as studio art majors and focus their newly acquired skills on a specific theme or area of artistic research. In addition to creating this visual work, students develop an appreciation for aesthetics and concept exploration. Capstone experiences develop creative autonomy. Students who complete the capstone studios are no longer dependent upon externally supplied assignments; they are able to focus upon artistic questions of their own. These courses are excellent preparation for life after Fairfield.

Students interested in the Studio Art major or minor should consult with the Studio Art Program Director before beginning the program. Students are encouraged to declare the major officially no later than the end of the sophomore year of studies. Transfer credits in studio art must be approved by the studio program director. Advanced Placement credits will not be accepted. Evening and intersession courses may not count for the studio art major or minor. There is a \$45 laboratory fee for each studio art course and an additional \$50 dollar fee for digital and alternative process photography courses. Courses in the Florence University of the Arts or other study abroad programs must be approved by the studio art program director for studio credit for majors and minors.

For a 33-credit Studio Art major, students must satisfy the following requirements.

Complete all four foundation courses

SA 10 Foundation: Interpreting the Self (3 credits)

SA 11 Foundation: Structure, Space, and Environment (3 credits)

SA 12 Foundation: Drawing (3 credits)

SA 13 Foundation: Figure Drawing (3 credits)

Subtotal foundation credits: (12 credits)

Complete at least three of the following studio courses:

First Level

SA 105 Color Workshop (3 credits)

SA 130 Painting I (3 credits)

SA 131 Photographic and Digital Techniques in Printmaking (3 credits)

SA 132 Sculpture I (3 credits)

SA 133 Photography I: Alternative Processes (3 credits)

SA 134 Digital Photography (3 credits)

SA 136 Investigation of Text & Image (3 credits)

SA 137 Time Arts (3 credits)

SA 138 From Drawing to Painting (3 credits)

SA 139 Watercolor (3 credits)

Second Level

SA 230 Painting II (3 credits)

SA 231 Printmaking II (3 credits)

SA 232 Sculpture II (3 credits)

SA 233 Photography II (3 credits)

SA 235 Advanced Drawing (3 credits)

Subtotal studio credits (9 credits)

Complete both capstone studios

SA 300 Junior Seminar (3 credits)

SA 301 Senior Seminar (3 credits)

Subtotal capstone studio credits (6 credits)

Complete a minimum of one course in Art History

(AH 152, AH 164, AH 165, or AH 172 is required; AH 10, AH 11, AH 12, or AH 15 is recommended)

Subtotal history credits (6 credits)

Total: (33 credits)

Special Topics Electives

SA 302 Independent Study (3 credits)

SA 304 Studio Internships (3 credits)

For an 18-credit Studio Art minor, students must satisfy the following requirements.

Complete three foundation studios

SA 10, SA 11 (6 credits)

and either SA 12 or SA 13 (3 credits)

Complete two advanced studio courses (6 credits)

Complete a minimum of one course in art history

AH 10, AH 11, AH 12, AH 15, AH 152, or AH 165 is recommended (3 credits)

Total: (18 credits)

Course Descriptions

A=Applied H=History
Foundation Studios

SA 10 Foundation: Interpreting the Self (A)

This course develops fundamental studio skills and an understanding of visual thought processes. The course emphasizes concepts, contemporary art and theory, and a wide variety of materials and aesthetic categories such as drawing, painting, book arts, sculpture, and installation. Students investigate the ways in which visual thinking can be used to realize an awareness of one's self. Through the themes of line and the self, the course exposes students to the visual languages of abstraction and representation, and emphasizes the honing of perceptions, the process of selection and organization, and the seemingly constant revision and decision making involved in art making. Three credits.

SA 11 Foundation: Structure, Space, and Environment (A)

This course develops fundamental studio skills and an understanding of visual thought processes. Emphasis is placed on concepts, contemporary art and theory, and a wide variety of materials and aesthetic categories including drawing, collage, sculptural construction, and installation. Students investigate the ways in which visual thinking can be used to realize an awareness of the world outside oneself. Through the themes of space and the world, the course exposes students to the visual languages of abstraction and representation, and emphasizes the honing of perceptions, the process of selection, organization, and the seemingly constant revision and decision making involved in art making. Three credits.

SA 12 Foundation: Drawing (A)

This course focuses on the act of seeing and its intimate connection with mark-making. Experiences develop observational, expressive, and conceptual skills. Students explore the formal elements of drawing, such as line, value, composition, and form, and how they can be used to express an awareness of one's self and the world around one. The course explores a variety of materials and processes through in- and out-of-class projects. Students participate in critiques of these projects and, through writing and speaking, develop a language of aesthetic awareness and a sense of artistic quality. Three credits.

SA 13 Foundation: Figure Drawing (A)

This introduction to drawing from the human figure uses a wide variety of media and techniques. The course emphasizes understanding, interpretation, and expressive use of the figure in contemporary studio practice. Students discover proportion and form through line, value, perspective, anatomical studies, and analysis of structure. Students participate in critiques of their projects and, through writing and speaking, develop a language of aesthetic awareness and a sense of artistic quality. The course is typically offered fall semester. Three credits.

Advanced Studio Courses

First Level

SA 105 Color Workshop (A)

This course investigates fundamental color theory through studio projects using contemporary and historical references. Students focus on the development and exploration of ideas using a variety of color media and study the practical mixing and application of pigments. The course stresses perception, visual awareness, sensitivity, attitude, and judgment, and is typically offered fall semester. Three credits.

SA 130 Painting I (A)

This course introduces the methods, techniques, and language of oil painting. Students explore principles of color, construction, paint handling, delineation of form and space, light and shadow, surface, texture, and composition. Students paint primarily from observation and employ representational and abstract modes. Materials and historical concerns are integral parts of directed and individual investigations. Three credits.

SA 131 Photographic and Digital Techniques in Printmaking (A)

This foundation level course introduces traditional and experimental approaches to printmaking. It encourages development of imagery and technique, and emphasizes context through the medium. Areas explored include photographic transfer methods, digital imaging, mono-prints, silkscreen, and etching. The course is typically offered fall semester. Three credits.

SA 132 Sculpture I (A)

An introduction to three-dimensional form and space, this broad-spectrum studio encompasses the diversity of contemporary sculptural activities, including the construction of objects, installations, and site work. Students investigate specific concepts presented by the instructor using a variety of materials including wood, metal, plaster, clay, paper, mixed media, and fabric. Three credits.

SA 133 Photography I: Alternative Processes (A)

This course covers alternative techniques in photography, including Cyanotypes, Kallitypes, collage, and instant photography. Additionally, students will have readings pertaining to the history of the medium, and will be introduced to contemporary concepts and use of the photographic image. A digital camera, while not required, will be useful. There are a small number of manual and digital loaner cameras available through the Studio Art Program, but loans are available on a first come basis. **The materials fee for this class is \$95.** Three credits.

SA 134 Digital Photography (A)

This course covers basic techniques of digital photography, including print production, the development of concepts and theory in photography, the relationship of photography to other visual media, and the study of historical and contemporary precedents. In addition, students will explore the manipulation of photographic images in both black and white and color through the use of Adobe Photoshop. Students must provide their own digital camera. For this course, cameras must have a manual over-ride option. There are nine possible loaner cameras available through the Studio Art Program, but loans are available on a first come basis. **The materials fee for this class is \$95.** Three credits.

SA 136 Investigation of Text and Image (A)

How does visual language differ from written language? How do they interact? This course considers these and related issues concerning the nature of visual and written language. The course introduces students to the working methods and thought processes of independent artists, and engages students in a dialogue with contemporary artistic, social, and natural and/or political issues under the tutelage of a practicing artist. Typically offered every other spring semester. Three credits.

SA 137 Time Arts (A)

This course uses a wide variety of media to develop and present performance and installation art, emphasizing interconnections with video, computer, telecommunications, photography, film, live performance, music, and sound. It is typically offered every other spring semester. Three credits.

SA 138 From Drawing to Painting (A)

This course specializes in teaching students to work with drawing as a way to develop subject matter and transition into painting. The first part of the semester is focused on collecting and drawing from visual references such as nature, the figure, interiors and still life. Working with sketches, students learn to develop a visual vocabulary to articulate ideas that are meaningful and personal to them. This practice is used as a starting point to develop a language of expression and transition into painting. Three credits.

SA 139 Watercolor (A)

This course is an introduction to the methods, techniques and language of watercolor. In exploring the fundamentals of watercolor this course helps students develop their abilities to see and explore washes of color in relation to pictorial space and form. Color relationships, value, layering of washes, and wet into wet processes are explored. Three credits.

Second Level**SA 230 Painting II (A)**

This course builds on the experience of Painting I and stresses fluency in paint and the advanced development of technical and expressive skills. It focuses on the generation of ideas as a central component in the process of painting. Individual direction is developed in consultation with the instructor. The course, typically offered in the spring semester, includes individual and group criticism. (Prerequisite: SA 130) Three credits.

SA 231 Printmaking II (A)

This course focuses on the development of technical and conceptual skills as a central component in the process of printmaking, with an emphasis on developing individual direction through studio work, drawing, writing, and research. Students explore intaglio, silkscreen, and painterly methods of mono-printing. The course is typically offered fall semester. (Prerequisite: SA 131) Three credits.

SA 232 Sculpture II (A)

This course builds on the experience of Sculpture I and stresses the advanced development of technical and expressive skills. It focuses on the generation of ideas as a central component in sculpture. Individual direction is developed in consultation with the instructor. Typically offered in the spring semester, the course includes individual and group criticism. (Prerequisite: SA 132) Three credits.

SA 233 Photography II (A)

This course builds upon the fundamentals of digitally-based photography learned in Digital Photography, SA 134. It covers advanced and mixed media techniques. The course emphasizes the generation of ideas as the central component in the process of photography. A digital camera is required for this course. There are a small number of loaner digital cameras available for use. Typically offered spring semester. **The materials fee for this class is \$95.** (Prerequisite: SA 134) Three credits.

SA 235 Advanced Drawing (A)

This course builds upon the experience of SA 12 and stresses advanced development of skills. It focuses on the generation of ideas as a central component in the process of drawing and emphasizes individual direction and inventive drawing through studio projects developed in consultation with the instructor. Typically offered in spring semester, the course includes individual and group criticism. (Prerequisite: SA 12) Three credits.

Capstone Studios

SA 300 Junior Seminar

Open only to juniors majoring in studio art, this course helps students develop a unique body of work representative of their explorations, discoveries, and development. Students read and discuss contemporary and art historical issues and participate in collaborative and solo exhibitions. Visiting artists and critics are a feature of the class. Spring semester only. Three credits.

SA 301 Senior Seminar

Open only to seniors majoring in studio art, students in this course continue to develop a unique body of work representative of their explorations, discoveries, and development. Students regularly read and discuss contemporary and art historical issues and participate in collaborative and solo exhibitions. Visiting artists and critics are a feature of the class. Spring semester only. Three credits.

Special Topics Electives

SA 302 Independent Study

By arrangement with studio faculty, juniors and seniors work independently on specific studio projects. Progress is reviewed through individual critiques. Students regularly read and discuss contemporary and art historical issues. Students must finalize independent studies with the studio program director by the midpoint of the preceding semester. Three credits.

SA 304 Studio Internships

Studio internships are for students who have completed at least three studio courses and whose academic work has prepared them for professional work related to the major art internships as studio assistants to professional artists or for work in museums, galleries, or professional print shops in the metropolitan and regional areas. Internships require faculty sponsorship and departmental approval, and are developed by each student in consultation with the supervising professor. A student sets up a time to meet with the supervising professor and can either have a specific venue already selected and/or ask the supervising professor for assistance in finding a studio, gallery, museum, or artist to contact. Internships must be finalized with the studio program director by the midpoint of the preceding semester. Three credits.

The Theatre Program at Fairfield offers students a liberal arts education balanced between the theoretical and practical aspects of the discipline. Students who complete a major or minor concentration in theatre know how to put on a show from conception through strike and have a broad, liberal education. They have had the benefit of instruction from theatre professionals in acting, dance, design, directing, playwrighting, production, and stagecraft, and have studied with professors specializing in history, literature, and criticism of the stage.

Goals for students taking theatre core courses are: to gain factual knowledge of all aspects of theatre in practice and theory; to develop the specific skills required for working theatre professionals; and to develop creative capacities as artists, thinkers, and problem solvers. In advanced courses, students' abilities are enhanced through rigorous engagement in analyzing, critically evaluating, and creating theatre art. All courses focus on the development of strong communication skills and help students become better writers, speakers, and collaborators.

Theatre Fairfield is the academic production wing of the program. Theatre Fairfield's season includes professionally directed and designed productions, as well as student-written, directed and designed work. In any given four-year period we produce plays from many historical periods and styles: musicals, comedies, serious dramas, period plays, contemporary works, original plays, and devised work. A group of four scholarship students works closely with faculty and staff in administering Theatre Fairfield's season.

Recent productions have included *An Enemy of the People* by Henrik Ibsen, *The Glass Menagerie* by Tennessee Williams, Sarah Ruhl's *Dead Man's Cell Phone*, Shakespeare's *Romeo & Juliet* directed by distinguished guest artist Barbra Berlovitz, *Machinal* by Sophie Treadwell, *Three Sisters* by Anton Chekhov; Richard O'Brien's *The Rocky Horror Show*; *We Won't Pay! We Won't Pay!* by Dario Fo; *Cabaret*, the Kander/Ebb musical; *The Importance of Being Earnest* by Oscar Wilde; *The Shadow Box* by Michael Cristofer; *'59 Pink Thunderbird* by James McLure; Steve Martin's *Picasso at the Lapin Agile*; Tim Robbins's *Dead Man Walking*; Aristophanes' *The Birds*; Shakespeare's *As You Like It*; *Lend Me a Tenor* by Ken Ludwig; the rock-musical *Hair*; Lillian Hellman's *The Children's Hour*; and *The Laramie Project* by Moises Kaufman. Participation in Theatre Fairfield productions is open to all students at the University, regardless of major or minor.

In 2010, the Theatre Program hosted the first guest artist residency in the history of Fairfield University. Founder and Artistic Director of the TONY-award winning Theatre de la Jeune Lune, Barbra Berlovitz, directed a contemporary-styled production of Shakespeare's *Romeo & Juliet* that responded to global events and issues of our time. She was joined by costume designer Sonya Berlovitz, who has designed for major theatre companies throughout the world, in creating this revolutionary production. Theatre Fairfield's production was the culminating event of The R&J Project, a campus-wide, multidisciplinary exploration of Shakespeare's play as it relates to young love, family and political turmoil, and issues of race, gender, and religion. Please visit the website www.fairfield.edu/randj to see the totality of this extraordinary project.

In helping students become well-rounded theatre people, this program emphasizes the development of good communication skills, which are essential to work in the theatre, as well as to all aspects of life. Courses stress the development of written, verbal, and artistic abilities. The program also advocates double majors and/or minors with other academic disciplines such as English, psychology, sociology, history, philosophy, communication, and modern languages, as well as double-majors with the School of Business.

Due to the interdisciplinary nature of this program, undergraduate education in theatre is excellent preparation for careers in all facets of the theatre industry as well as in public relations, communications, advertising, writing or publishing, marketing, education, public service, and law. The Theatre Program also advocates double majors and/or minors with other disciplines such as English, psychology, sociology, history, philosophy, communication, and modern languages, as well as with all programs in the School of Business. Students interested in a major or minor concentration in theatre should consult with theatre faculty before beginning the program.

Students participating in Theatre Fairfield productions earn one credit per show for either performance (TA 94), or production (TA 95). Theatre majors must earn a total of three credits in TA 94 or TA 95 each academic year. Theatre minors must earn a total of two credits in TA 94 or TA 95 each academic year.

Requirements

The Theatre Major (33 Credits)

Theory: (6 credits total)

TA 11 Introduction to Theatre
TA 310 Capstone: Theory of Production

History and Dramatic Literature: (9 credits total)

TA 110 World Theatre: Beginnings to 1800
TA 111 World Theatre: 1800 to Tomorrow

and one of the following:

TA 120 American Drama
TA 210 Theatre in Production

Performance: (6 credits total)

TA 30 Acting I
TA 230 Acting II

Tech: (3 credits total)

TA 150 Stagecraft (pending approval)

Design: (6 credits total)

TA 155 Design I

and one of the following:

TA 253 Costume Design (pending approval)
TA 256 Stage Lighting (pending approval)
TA 288 Scene Design (pending approval)

Administration: (3 credits total)

TA 106 Theatre Administration & Management (pending approval)

Plus: Participation in the majority of the TF Productions, through TA 94 and TA 95, earning at least 5 tech points per academic year.

Theatre Minor (18 credits)

Theory: (6 credits total)

TA 11 Introduction to Theatre
TA 310 Capstone: Theory of Production

History and Dramatic Literature: (3 credits total)

TA 111 World Theatre: 1800 to Tomorrow

Performance: (3 credits total)

TA 30 Acting I

Tech: (3 credits total)

TA 150 Stagecraft (pending approval)

Design: (3 credits total)

TA 155 Design I

Plus: Participation in at least half of the annual TF Productions, through TA 94 and TA 95, earning at least 5 tech points per academic year

Credit for Theatre Fairfield Productions

It is impossible to understand the nature of theatre without engaging in the process of making theatre. Therefore, major and minor coursework is supplemented by required participation in Theatre Fairfield productions.

Students earn course credit for such participation. This acknowledges and embraces the educational nature of production work.

- TA 94, Theatre Fairfield Performance Practicum is a 1 credit course that enrolls all students who perform in Theatre Fairfield shows. Credit in these classes is figured in the student GPA, but the class hours count over and above the 120 hours required for graduation.
- TA 95, Theatre Fairfield Production Practicum is a 1 credit course that enrolls all students who are on crews for Theatre Fairfield shows. Credit in these classes is figured in the student GPA, but the class hours count over and above the 120 hours required for graduation.

Tech Points

Tech point requirements will be reasonably adjusted, as necessary, for semesters when students are studying abroad.

Production positions earn the following number of points:

10 Designer
10 Director, Festival/Independent Project
10 Technical Director
10 Stage Manager, full-length piece
6 Assistant Stage Manager, full-length piece
6 Stage Manager, one-act piece
6 Master Carpenter
6 Props Manager
6 Costume Manager
5 Props Crew
5 Costume Crew
5 Paint Charge
4 Assistant Stage Manager, one-act piece
4 Master Electrician
4 Paint Crew
3 Light Board Operator
3 Sound Board Operator
3 Running Crew
2 House Manager
2 Electrician
2 Carpenter
1 Assistant Box Office Manager

- All tech points are awarded to students through TA 95, Theatre Fairfield Production Practicum.
- Students do not earn tech points for directing in Director's Cut, which is a course requirement for TA 240, Technique and Art in Design.
- If a student performs a production position not on this list, faculty will assign a tech point value.
- Continual faculty oversight will ensure that students will gain experience in a variety of production positions.

Course Descriptions

A=Applied H=History**TA 11 Introduction to Theatre (H)**

This course challenges and expands upon previously conceived notions of theatre. Students will come to understand the unique contribution that theatre provides for human society, and ultimately become better audience members. Topics include: dramatic structure, genres, the actor/audience relationship, and the interpretation of the script by designers, actors, and directors. Emphasis is placed on improving analysis and writing skills. The course is strongly recommended for non-majors and students interested in fulfilling a visual and performing arts core requirement. Three credits.

TA 30 Acting I (A)

This class is an intensive introduction to technique and training essential to acting. Manifesting the understanding of key concepts through demonstrating skills is the primary focus of the course. Physical openness and responsiveness are explored and developed in pursuit of performance that is dynamically immediate and wholly engages audience, ensemble, and performer. Students will learn and practice Viewpoints, an approach to performance that allows performers to develop stage presence, play as a member of an ensemble, and make exciting performance choices. The class also introduces vocal technique for stage, the key ingredient to theatrical storytelling. Three credits.

TA 50 Backstage Fundamentals (A)

This class covers the rudiments of the technical end of theatrical production. Topics include stage management, proper tool use, basic scenery construction, lighting, prop management, and basic costume construction. Students are required to participate in construction and rigging for Theatre Fairfield productions. Three credits.

TA 93 Physical Performance Lab (A)

Excellent and sustainable acting requires physical training and this lab develops students' physical and breath support conditioning, core strength, physical alignment, overall kinesthetic and breath-center awareness, openness and responsiveness, and physical and vocal expressiveness. Each semester and session integrates conditioning with an overarching focus on addressing particular techniques or performance challenges (i.e. Viewpoints, speaking verse). The course is open to all Fairfield students; students may take the course more than once and are encouraged to do so. No prerequisite. One credit.

TA 94 Theatre Fairfield Performance Practicum (A)

Students gain first-hand training in the art of performance under the guidance of theatre professionals. Everyone cast in a Theatre Fairfield production is automatically enrolled in this one-credit practicum; students may not enroll on their own. This course may be repeated. One credit.

TA 95 Theatre Fairfield Production Practicum (A)

Students gain first-hand training in the art of theatre production under the guidance of theatre professionals. Everyone working on a crew of a Theatre Fairfield production is automatically enrolled in this one-credit practicum. Students must consult with theatre faculty regarding placement in stage management, technical, or front-of-house duties. This course may be repeated. One credit.

TA 110 World Theatre, Beginnings to 1800 (H)

Theatre serves as a vehicle to consider the social, political, and economic forces that shaped societies and their entertainments. This course surveys theatre and performance (dance, pageantry, spectacle, and popular entertainments) as a mirror of the people and times that shaped them. It begins with a consideration of the human need for mimesis and entertainment, and swiftly moves into the fifth-century B.C.E. and the golden age of Greek drama. Other topics include Roman theatre, medieval religious drama, Japanese theatre, Renaissance spectacle and pageantry, censorship, the advent of women on the stage, and popular theatre forms through the 18th century. The course includes theatre trips. Three credits.

TA 111 World Theatre, 1800 to Tomorrow (H)

This course examines 19th- and 20th-century theatre and performance (ballet, modern and post-modern dance, "happenings," musical comedy) in the context of the people and societies that shaped them. It begins by examining the impact of technology on the theatrical world and continues to the present day with a consideration of the avant-garde and contemporary forms such as performance art. The course includes theatre trips. Three credits.

TA 120/EN 125 American Drama (H)

This course examines the development of American theatre from the 18th through the 21st centuries, including a study and analysis of the special problems affecting the development and changes in American society as seen through American playwriting and theatre production. Students read over twenty plays that grapple with issues of race, ethnicity, gender, class, and what it means to be an American, and take at least one field trip to see a live performance. The course meets the U.S. diversity requirement and is cross-listed with the American Studies program. Three credits.

TA 122 Asian Theatre (H)

Asian Theatre is a survey of major classical and contemporary theatres of Japan, China, India, and Indonesia. Included are traditional plays as well as dance, puppetry, and opera. Students view productions on video and film, read and discuss plays, explore the historical and sociological context which shaped these entertainments, and take at least one field trip to see a live performance. This course meets the world diversity requirement and is cross-listed with the Asian Studies program. Three credits.

TA 123/EN 120 American Women Playwrights (H)

This course will focus on American Women Playwrights, 1775-2005. We will trace the evolution of drama by women from Mercy Otis Warren's anti-British political satires of the Revolutionary War to plays reflecting the 21st-century concerns of African American, Asian, American, and Latina playwrights. Plays will be discussed in light of the social, political, and economic climates that produced them. Special emphasis will be given to questions of sex, gender, race, ethnicity, and class as we explore how American women, despite considerable obstacles, have developed their own theatrical voices. Our study will be further informed by the work of feminist performance theorists. This course meets the U.S. diversity requirement and is cross-listed with Women, Gender and Sexuality Studies. Three credits.

TA 135 Modern and Contemporary Dance (A)

This course explores the movement principles of the major dance figures in the 20th century, including Martha Graham, Doris Humphrey, Hanya Holm, Jose Limon, and Merce Cunningham. Students complete research, compositional assignments, and structured improvisations to support the classroom activity. Overall, students gain a historical perspective of modern dance as an art form and improve their own dance technique in terms of strength, alignment, and flexibility. Three credits.

TA 136 Introduction to Jazz Dance (A)

This course combines dance technique and a historical survey of jazz dance. Students explore jazz dance origins from African and European traditions; their manifestation in the United States through slavery, minstrel shows, and vaudeville; and the development of style through the influences of tap, ballet, and modern dance. Students complete research, compositional assignments, and structured improvisations to support the classroom activity. Three credits.

TA 137 Dance in Musical Theatre (A)

This course explores dance for the popular stage in America. Through investigation of well-known musicals such as *West Side Story*, *Grease*, *Guys and Dolls*, and *Oklahoma!* students understand how each musical requires its specific idiom of movement, and how styles, trends, and traditions affect theatre choreography. Students learn the components within an effective musical theatre number as well as gain strength, flexibility, and proficiency in technique. Students complete research, compositional assignments, and structured improvisations to support classroom activity. Three credits.

TA 138 Folk and Social Dance (A)

This course explores dance as social interaction and communal activity. Students discuss and participate in various kinds of folk dances originating from different ethnic cultures and explore their common roots in primitive rituals, religious worship, courtship, recreation, celebration, and therapeutic or healing experiences. The course also explores contemporary forms of ballroom, disco, and club dancing. Students complete research, compositional assignments, and structured improvisations to support classroom activity. Three credits.

TA 153 Makeup and Costume Construction (A)

This workshop introduces the basic principles, skills, and techniques of applying theatrical makeup and building costumes. The makeup portion explores two- and three-dimensional makeup techniques including corrective makeup, age makeup, facial hair, and prosthetic makeup. The costume portion focuses on hand and machine sewing techniques, fabrics and fabric modification, and garment construction. Students are required to participate in costume construction for Theatre Fairfield productions. Three credits.

TA 155 Design I (A)

This practical course introduces the student to the skills of the theatre designer, and the elements of scenic, costume and lighting design. This course focuses on the underlying theories and principles that affect theatre design, as well as the history of how design has been used in theatrical production. Focus will be placed on developing the skills designers employ: observation, analysis, research, visualization, conceptualization, communication, collaboration and creative thinking. Three credits.

TA 158 Scene Painting (A)

This workshop introduces the basic principles, skills, and techniques of the scenic artist. Through a series of painting projects, students explore common painting techniques, including marble, brick, wood, and wallpaper. The course gives special attention to matching the paint project to the paint elevation, as well as developing creative thinking skills. Students serve as members of the paint crew for a Theatre Fairfield production. Projects emphasize craftsmanship and the ability to work as part of a team in addition to dealing with the time factors of actual production. Research into various techniques, styles, and visual textures supplements hands-on work in the class. Three credits.

TA 210 Theatre in Production (A or H depending on semester offered)

Open to students by instructor invitation, TA 210, Theatre in Production offers an expansive immersion as students engage in focused theatrical research in both classroom and theatre, resulting in a fully realized Theatre Fairfield production. The class-production format makes available particularly challenging scripts and/or artistic approaches that might not otherwise be approached. Though each course varies depending on instructor and production, the TA 210 class-production experience focuses on building significant bridges between theory and practice. Accordingly, TA 210 is a foundational class of the theatre major and one section is required, though multiple sections may be taken for credit. Three credits.

TA 230 Acting II (A)

This is an intensive acting course that builds upon the basic acting principles taught in TA 30 Acting I. In this course students apply what they have learned about the art, analysis, and interpretation of acting to a variety of dramatic styles. Students explore several period acting styles through in-class exercises and performances of rehearsed scenes and monologues. This course culminates in a public performance. Students gain a well-rounded and thoughtful understanding of acting as a practical and intellectual art that prepares them for further work in theatre and related performing arts. (Prerequisite: TA 30 or the permission of the instructor) Three credits.

TA 231/FM 133 Acting for the Camera (A)

This course is an experiential introduction to the specialized techniques used in successful on-camera acting. On-camera exercises will emphasize the importance of listening, truthful moment-to-moment response, and effective communication skills. Students will practice their skills and apply their training to commercials, current television scripts, and screenplays. Initial classes examine the difference between acting for the stage and acting for the camera. Students will practice a variety of on-camera styles including comedy, crime drama, and commercials. The course builds towards longer scene work from a screenplay. Topics include script analysis, nuance and depth of performance, and relaxation and confidence on-camera. (Prerequisite: TA 30) Three credits.

TA 240 Technique and Art in Directing (A)

This course for advanced students covers the theory, practice, and history of directing for the theatre. In a workshop format, students explore various ways of bringing a play script from conception to full production. The course includes sessions in text analysis, working with actors and designers, and the role and responsibility of the director to the overall production. Students direct several in-class scenes and a one-act play that is produced in Director's Cut, part of Theatre Fairfield's season. (Prerequisite: TA 30) Three credits.

TA 241 Examining the Sixties: History, Art, and Legacy (H)

This course, offered by two historians who specialize in 20th-century American history, explores the 1960s from the dual perspectives of history and the arts. Political and artistic change happened concurrently in this era, and was often instigated by people who promoted societal change via the creation of art. The course approaches the period as "the long '60s," beginning in the early 1950s and ending in 1975 with the U.S. withdrawal of forces from Vietnam. Class sessions combine lecture, discussion, and experiential events as a means of understanding how art and activism worked hand-in-hand. Students may choose to take this course for either visual and performing art or history core credit. Also listed as HI 241. This course meets the U.S. diversity requirement. Three credits.

TA 250 Advanced Stagecraft (A)

This introduction to the technical aspects of theatre production provides an overview of the physical stage, including the use of scenery and lighting. Students learn basic techniques of set construction and rigging, lighting, and electronics for today's theatre. Students are required to participate in construction and rigging for Theatre Fairfield productions. Three credits.

TA 255 Advanced Design (A)

This practical course fosters the development of visual communication skills, play analysis skills, and sensitivity to the communicative properties of visual images. The course covers scenic design, costume design, and lighting design, and emphasizes concept development, visual research, and creative thinking. Readings include influential designers Robert Edmond Jones and Edward Gordon Craig. (Prerequisite: TA 155) Three credits.

TA 300 Special Topics (H)(A)

Students undertake an in-depth study of a specific problem, period, or style of acting, dance, or other aspect of production conducted by a leading scholar/practitioner in the field. The course is open to invited students only. Three credits.

TA 306 Arts Administration Principles and Practices

This course explores the fundamental principles associated with not-for-profit arts organizations. This course is for all arts students, as the study of arts administration core principles sets a foundation of essential knowledge vital for employment within a non-profit arts organization. Such training also is for practicing artists and those with for-profit intentions. Students will come away with knowledge and skills, as well as a strong self-awareness of their leadership and management capacities. (Prerequisite: At least 2 VPA courses in Music or Theatre). Three Credits.

TA 310 Technique and Theory of Production (H)

This in-depth exploration of theatre aesthetics and production theory centers on study and analysis of the writings and work of such major figures as Antonin Artaud, Peter Brook, Harold Clurman, Edward Gordon Craig, Jerzy Grotowski, and Susan Sontag. Students consider what theatre is, can, and should be while studying varying perspectives on theatrical design, directing, and staging practices. The course also examines contemporary theatre management and administration. The class culminates in group projects that present details for a theatre company as well as a selected play, including a consideration of style, period, point of view, historical precedent, acting, directing, design, venue, and budget. This is the capstone class for theatre majors and minors but other interested students with sufficient background are welcome. Three credits.

TA 395 Theatre Internship (A)

With faculty sponsorship and departmental approval, students develop internships as assistants to professional theatre designers and managers or with professional theatres, studios, and production companies in the regional/metropolitan area. Internships are also available in the organizational and management areas of Theatre Fairfield. Students interested in becoming interns must consult with theatre faculty well in advance of the desired internship semester. Three credits.

TA 399 Independent Study (H)(A)

Usually open only to students earning a major or minor in theatre, this course allows students to intensively explore stage management, design, acting or directing under the guidance of a faculty member. Students must have the approval of the theatre faculty before registering for this course. Three credits.

Women, Gender and Sexuality Studies is an interdisciplinary program that challenges the cultural, intellectual, social and political assumptions about sex, gender and sexuality systems. A unique field, Women, Gender and Sexuality Studies draws on scholarship from multiple disciplines to develop its own theories, methods and epistemologies. The inextricable linkage of theory and practice forms the foundation of the field. Courses in the program critically engage issues of race, ethnicity, class, gender, sexuality and other key components of identity, and the ways they intersect.

The Women, Gender and Sexuality Studies program offers you opportunities to:

- Identify intersecting systems of power; including race, class, ethnicity, gender, sex and sexuality.
- Gain specialized knowledge and acquire proficiency in course content.
- Apply theories, methods and epistemologies to course materials and lived experience.
- Analyze and critically evaluate the implications of specialized knowledge put into practice.

As an interdisciplinary program, Women, Gender and Sexuality Studies offers a unique way to combine elements from other disciplines and bring them together in especially powerful ways: Women, Gender and Sexuality Studies encourages research and scholarship that integrate diverse ideas.

Requirements

For an 18-credit minor in Women, Gender and Sexuality Studies, students complete:

- Five courses, three of which must be gender-focused, and two others, which may be gender-focused or gender-component courses. Courses must be chosen from at least two disciplines.
- WS 301 WGS Capstone Seminar after completing the other five courses.
With permission of the director, other capstone experiences that focus on women, gender and sexuality topics may be counted in place of WGS 301. If another capstone experience is substituted, then a sixth WGS course must be completed from the list of approved courses.

Course Offerings

Courses available for the Women, Gender, and Sexuality minor:

(*indicates gender-component course)

Applied Ethics

AE 271 The Sacred Balance

AE 283 Environmental Justice

AE 297 Eco-feminism

AE 298 Ethics and Feminist Perspectives

Women, Gender and Sexuality Studies

WS 101 Introduction to Women, Gender and Sexuality Studies

WS 299 WGS Studies Internship

WS 301 WGS Studies Capstone Seminar

WS 399 WGS Studies Independent Study

Course Descriptions

WS 101 Introduction to Women, Gender and Sexuality Studies

This course introduces students to the interdisciplinary study of women, gender and sexuality. Feminist pedagogy informs the structure content and classroom environment, emphasizing student participation. This course explores the constructed categories of male/female, masculine/feminine, and heterosexual/homosexual. The course also seeks to place gender and sexuality in a historical and contemporary cultural framework, within the context of both the U.S. and global systems. Ultimately this course engages students in the critical examination of intersecting systems of power. Topics covered in the course include: politics and health, work and economics, media and culture, as well as religion and family. This course satisfies the US Diversity Requirement. Three Credits.

WS 299 Women, Gender and Sexuality Studies Internship

The internship program allows students to gain on-site experience that can be related to the discipline of Women, Gender and Sexuality Studies. Internship areas include health, publishing, communications, politics, and many other fields. Students consult the program director for a list of internship opportunities before registering for this course. Faculty supervision helps students integrate their experiences with the intellectual foundation acquired in their academic courses. Three credits.

WS 301 Women, Gender and Sexuality Studies Capstone Seminar

Students take this final course in the minor sequence in the senior year after completing the other five required courses. The course integrates feminist approaches across the disciplines, emphasizing the relationship between theory and practice. It is open to seniors only; juniors may enroll with the permission of the program director. Three credits.

WS 399 Women, Gender and Sexuality Studies Independent Study

By arrangement with Women, Gender and Sexuality Studies faculty, students may choose to work independently on special topics. See the program director for details. Three credits.

William M. Abbott

Associate Professor of History
A.B., University of California, Berkeley
D.Phil., Oxford University, England

Anna-Maria Aksan

Assistant Professor of Economics
B.A., Tufts University
Ph.D., University of Oregon

Gwendolyn Alphonso

Assistant Professor of Politics
B.A. LL.B., National Law School of India University
B.C.L., Oxford University - Lincoln College
J.S.D., Cornell University Law School
Ph.D., Cornell University

James M. Ambury

Visiting Assistant Professor of Philosophy
B.A. New York University
M.A. American University
M.A., Ph.D., State University of New York, Stony Brook

Michael Andreychik

Assistant Professor of Psychology
B.A., M.S., Ph.D., Lehigh University

M. Covadonga Arango-Martin

Professor of the Practice of Modern Languages and Literatures
B.A., Universidad de Valladolid, Spain
M.A., University of Wisconsin, Madison

Colleen Arendt

Assistant Professor of Communication
B.A., St. Norbert College
M.A., Ph.D., Purdue University

Paul Baginski

Assistant Professor of Mathematics
B.S., M.S., Carnegie Mellon University
Ph.D., University of California, Berkeley

Peter Bayers

Associate Professor of English
B.A., Villanova University
M.A., New York University
Ph.D., University of Rhode Island

Steven Bayne

Associate Professor of Philosophy
B.A. Evangel College
M.A., Ph.D., The Ohio State University

Jack W. Beal

Professor of Physics and Computer Engineering
B.S., Texas Technological University
M.S., Ph.D., Michigan State University

Patricia E. Behre

Associate Professor of History
B.A., M.A., Ph.D., Yale University

Christopher R. Bernhardt

Professor of Mathematics
B.A., M.Sc., Ph.D., University of Warwick

James E. Biardi

Associate Professor of Biology
B.S., University of California, Irvine
Ph.D., University of California, Davis

Angela Biselli

Associate Professor of Physics
B.S., Università di Genova
M.S., Ph.D., Rensselaer Polytechnic Institute

Elizabeth H. Boquet

Professor of English
B.A., Nicholls State University
M.A., University of Southern Mississippi
Ph.D., Indiana University of Pennsylvania

Jocelyn M. Boryczka

Associate Professor of Politics
B.A., The College of William and Mary
M.A., Louisiana State University
M.A., Wayne State University
Ph.D., City University of New York

Betsy A. Bowen

Professor of English
B.A., Colby College
M.A., Middlebury College
Ph.D., Carnegie Mellon University

Dorothea D. Braginsky

Professor of Psychology
B.A., Queens College
M.A., Ph.D., University of Connecticut

Phyllis C. Braun

Professor of Biology
B.S., Fairfield University
Ph.D., Georgetown University

Sara Brill

Associate Professor of Philosophy
B.A., Trinity University
Ph.D., The Pennsylvania State University

Diane J. Brousseau

Professor of Biology
B.S., Ph.D., University of Massachusetts, Amherst

Rachelle Brunn

Assistant Professor of Sociology
B.A., University of Delaware
M.A., Ph.D., University of Pennsylvania

Cecelia F. Bucki

Professor of History
B.A., University of Connecticut
M.A., Ph.D., University of Pittsburgh

Ashley (Soyong) Byun

Assistant Professor of Biology
B.Sc., York University
Ph.D., University of Victoria, British Columbia, Canada

Javier F. Campos

Professor of Modern Languages and Literatures
Pedagogía en Español, Universidad de Concepción (Chile)
Ph.D., University of Minnesota

Mary Ann Carolan

Associate Professor of Modern Languages and Literatures
B.A., Dartmouth College
M.A., M. Phil., Ph.D., Yale University

Kevin J. Cassidy

Professor of Politics
B.A., Catholic University
M.S., Hunter College
Ph.D., City University of New York

Suzanne Chamlin

Associate Professor of Visual and Performing Arts
B.A., Barnard College
MFA, Yale University

Pamela C. Chisum

Visiting Assistant Professor of English
B.A., San Francisco State University
M.A., California State University Stanislaus
Ph.D. Washington State University

Geoffrey A. Church

Health Professions Advisor
Assistant Professor of Biology
B.S., Clarkson University
M.S., Ph.D., Albert Einstein College of Medicine

Matthew P. Coleman

Professor of Mathematics
B.A., LaSalle College
M.A., Ph.D., Pennsylvania State University

Robbin D. Crabtree

Dean of the College of Arts and Sciences
Professor of Communication
B.A., University of California, Santa Barbara
M.A., Ph.D., University of Minnesota

David L. Crawford

Associate Professor of Sociology and Anthropology
B.A., California State University, Fullerton
M.A., Ph.D., University of California, Santa Barbara

Nancy A. Dallavalle

Associate Professor of Religious Studies
B.Mus., Benedictine College
M.A., St. John's University
Ph.D., University of Notre Dame

Jennifer A. Darrell

Visiting Assistant Professor of Modern Languages and Literatures
B.A., Sweet Briar College
M.A., University of Chicago
M.A., M.Phil., Ph.D., Yale University

Bidyut Das

Assistant Professor of the Practice, Physics
M.S., Indian Institute of Technology, Kampur
Ph.D., City University of New York

Ronald M. Davidson

Professor of Religious Studies
B.A., M.A., Ph.D., University of California, Berkeley

Carol Ann Davis

Assistant Professor of English
B.A., Vassar College
M.F.A., University of Massachusetts

Mark Demers

Associate Professor of Mathematics
B.A., Amherst College
M.S., Ph.D., Courant Institute, New York University

Joseph B. Dennin

Professor of Mathematics
B.A., College of the Holy Cross
M.A., Ph.D., University of Wisconsin

Jill Deupi

Assistant Professor of Visual and Performing Arts
B.A., Mount Holyoke
M.A., University of London
Ph.D., University of Virginia

W. Richard DeWitt

Professor of Philosophy
B.S., University of Idaho
M.A., Ph.D., The Ohio State University

David Downie

Director, Environmental Studies Program
Associate Professor of Politics
B.A., Duke University
M.A., Ph.D., University of North Carolina

Ryan Drake

Associate Professor of Philosophy
B.A., University of Oregon
Ph.D., Pennsylvania State University

Christine Earls

Professor of the Practice of Biology
B.S., Fairfield University
M.S., University of Bridgeport

Philip I. Eliasoph

Professor of Visual and Performing Arts
B.A., Adelphi University
M.A., Ph.D., State University of New York at Binghamton

Robert Epstein

Associate Professor of English
B.A., University of Pennsylvania
M.A., Ph.D., Princeton University

Zoe Erotopoulos

Professor of the Practice of Modern Languages and Literatures
B.A., College of New Rochelle
M.A., M.Phil., Ph.D., Columbia University

Rebecca Fang

Assistant Professor of Mathematics
B.S., M.S., Jilin University
M.S., Ph.D. Michigan Technological University

Anita Fernandez

Assistant Professor of Biology
B.S., University of Michigan
M.S., Ph.D., University of Wisconsin

Benjamin Fine

Professor of Mathematics
B.S., Brooklyn College
M.S., Ph.D., Courant Institute, New York University

Paul J. Fitzgerald, S.J.

Senior Vice President for Academic Affairs

The Charles F. Dolan School of Business

A Message from the Dean

What do you want to be? The highly competitive, globally-oriented, tech-savvy business world seeks energized, knowledgeable, inspired undergraduates with rock solid ethics to be the business leaders of the future. This is who we'd like to help you become during your time at the Charles F. Dolan School of Business. Whether you see yourself as an entrepreneur, an accountant, an international business executive, a marketing professional, an information systems manager, or an expert in the world of finance, we can help take you there.

How do we do this? We do this, first, through our excellent faculty. Yes, this is a faculty that does cutting edge research and, through a world-class curriculum, will teach you the business concepts critical to your future career. But this is also a faculty with substantial real-world business experience who seek to create an active learning environment. Here, real organizational problems are brought into the classroom to be dissected and debated, often with the actual managers involved. The faculty is also vitally interested in you. In classrooms averaging less than 24 students, and in one-on-one advising sessions, faculty are available to discuss your current concerns, your developing ideas and future career dreams.

We do this by creating a community of students who have the opportunity to interact closely with faculty, alumni, and staff. Be part of the Investment Club, and test out your investing skills. Join the Marketing, Accounting, or Management Clubs. Engage in the Analysts Case Competition in New York or our new Business Plan competition for entrepreneurs.

We do this by partnering with local business leaders and alumni, drawing on Fairfield County's strategic location, home to more than 40 Fortune 500 headquarters located within 50 miles of the University. When you're here, the world of business is literally at your front door.

We do this, finally, by stressing excellence in all that we do. The school is ranked among the best undergraduate business programs by *Bloomberg BusinessWeek*, *U.S. News & World Report*, and *Princeton Review*. Its undergraduate and graduate degree programs have been accredited by The Association to Advance Collegiate Schools of Business (AACSB International) since 1997.

What do you want to be? The Dolan School of Business offers you a range of choices, along with the resources and mentors to help you make that decision and reach your goals. We do it in an environment that takes its Jesuit foundations seriously, emphasizing a rigorous education, caring for our students, a concern for ethics and justice, and an understanding of the power of reflecting on your life.

We welcome you. We urge you to take advantage of all that this school offers, and make it your own.

Donald E. Gibson, Ph.D

Dean, Charles F. Dolan School of Business

The Charles F. Dolan School Of Business

Dean: Donald E. Gibson, Ph.D.

Associate Dean and Director of Graduate Programs: Mark Ligas, Ph.D.

Assistant Dean and Director of Undergraduate Programs: Heather L. Petraglia

Department Chairs

Accounting: Van Hise

Finance: Hlawitschka

Information Systems and Operations: He

Management: Scheraga

Marketing: Rajamma

Directors

Research: Bradford

International Studies: Jones

Students in the Dolan School of Business take the general education core curriculum required of all undergraduate students, thus ensuring that they receive a broad knowledge of the humanities, mathematics, social sciences, and natural sciences. In addition, students take a business core curriculum that introduces the fields of accounting, business ethics, economics, finance, global strategy, information systems, the legal environment of business, management, marketing, operations management, and statistics.

The balance of the program depends on the major - accounting, finance, information systems, international business, management and marketing. Minors are available to all students in accounting, accounting information systems, business law and ethics, entrepreneurship, finance, information systems, management, marketing, and operations management.

All members of the business faculty serve as academic advisors. Faculty members have substantial business experience, which makes them invaluable guides for students choosing a course of study to further specific career goals. The combination of general education and business core courses with those in the major areas of study develops in students the flexibility of mind that is a critical asset for the executive.

Students are motivated to continue to grow intellectually and be prepared for a professional career and future graduate study. A broad perspective on society and the proper role of business, based upon an appropriate set of moral values, are emphasized. In consultation with faculty, students follow an approved curriculum that reflects the depth and breadth of modern business practices.

Major Areas of Study

Six major areas of study are available to students in the Dolan School of Business. It is advised that students decide on a major, in consultation with their advisor, prior to the end of the sophomore year before registration begins (even though they are not required to do so until the beginning of their junior year). Once a major is selected, students have the option to change their major without penalty provided there is a sufficient period of time to complete the degree. The process of selecting and changing a major requires the student to complete a Change of Major form, available in the Dean's office.

Majors available in the Dolan School of Business include:

- Accounting
 - Finance
 - Information Systems
 - International Business
 - Management
 - Marketing
-

Minor Areas of Study

Dolan School of Business minors are available to all university students. It is the student's responsibility to complete the proper university form to enroll in a minor and to make sure that appropriate copies of the form are filed in both the dean's office and the registrar's office. The form is available in the Dean's office. The completion of the minor is subject to the availability of courses.

Minors available in the Dolan School of Business are as follows:

- Accounting
- Accounting Information Systems
- Business Law and Ethics
- Entrepreneurship
- Finance
- Information Systems
- Management
- Marketing
- Operations Management

University Honors Program

The Dolan School of Business participates in the University Honors Program, an interdisciplinary course of study (23 credits) open to invited freshmen and sophomores and devoted to intellectual history, interdisciplinary studies, and advanced work in the student's major field. A detailed description of the Program can be found in the Honors Program section on page 163.

Change of School

Students may transfer into the Dolan School of Business from the College of Arts and Sciences, School of Nursing, or School of Engineering if their overall grade point average is 2.80 or better.

Internship Program

The Dolan School of Business offers optional internships for qualified students. The presence of a large number of corporate offices in the Fairfield area provides an excellent opportunity for rewarding opportunities. These internships are undertaken for credit and, sometimes, for pay. An on-the-job supervisor and a faculty member monitor student progress. Students interested in internships should discuss arrangements as early as possible with the director of internship programs. Students must have an overall GPA of 2.50 or higher to qualify for the internship program. Internships for credit must be pursued in the major area of study. Once completed, students may pursue a second internship for credit in their business major or business minor. Internships do not fulfill any courses toward the major or minor; rather, they satisfy either the business elective or a free elective requirement.

School Activities/Programs

Complementing the Dolan School of Business's traditional pedagogical mission are a series of diverse and distinctive programs that serve to enrich the University community and its various constituencies.

- The Insignis Award for Visionary Leadership and Distinguished Achievement in Business is an award established to recognize outstanding business leaders for their fulfillment of the Jesuit concept of insignis - to distinguish oneself in a remarkable or extraordinary way. The award is consistent with the goals of The Dolan School of Business to achieve recognition and distinction in creating a business educational experience of the whole person who is socially responsible and prepared to serve others.
- The Distinguished Executive Lecture Series brings to the classroom setting leaders from the corporate or financial communities who address students on a specific topic related to the subject matter within an identified major area of study within the school. The unique perspective that business practitioners can bring to the academic environment is a welcome and valuable element to a student's business education.

Dolan School of Business Core Curriculum

The Charles F. Dolan School of Business undergraduate business core curriculum provides a solid foundation in business, while giving students more time to delve into their individual areas of study.

Dolan School of Business Curricula

	Courses	Credits
A. General Education Core Curriculum Requirements	21	63
B. Business Core Requirements	9	27
C. Courses in the Major Field	6	18
D. Business Elective	1	3
E. Free Electives	4	12

Total required credits: a minimum of 123 credits

Total required courses: a minimum of 41 three- or four-credit courses

General Education Core Curriculum (21 courses; 63 credits)

The general education core curriculum provides a truly liberal education, drawing upon five major areas of knowledge. For each of these five areas of competency, business majors select courses as follows:

Area I: Mathematics and Natural Sciences

- Two-Three Semesters of Mathematics depending on placement including one semester of Calculus and MA217: Accelerated Statistics (EC278 may substitute for MA217)
- Two semesters of a natural science.

Area II: History and Social Science

- Two semesters of history. HI 10 plus one 200-level course. CL 115-116 (Greek and Roman Civilization) may be used to fulfill this requirement.
- EC 11 Introduction to Microeconomics
- EC 12 Introduction to Macroeconomics

Area III: Philosophy and Religious Studies

- Two semesters of philosophy. PH 101 is required.
- Two semesters of religious studies. RS 101 is required.
- AE 291 Business Ethics

Area IV: English and Visual and Performing Arts

- EN 11 Texts and Contexts I
- EN 12 Texts and Contexts II
- One semester of English literature with a course number between EN 100-199. Writing courses (EN/W) do not fulfill the core literature requirement. Selected courses offering literature in translation may also fulfill this requirement - see listings under classical studies as well as modern languages and literatures.
- Two semesters of visual and performing arts. One semester must be in the art history, music history, theatre history, or film history.

Area V: Modern and Classical Languages

- Two semesters of the same language at any level selected from the offerings of the Department of Modern Languages and Literatures or the Classical Studies Program.

Diversity Requirements*

All students must complete one U.S. and one world diversity course from a designated list of courses. The courses may be chosen from the University core, business core, major, or electives.

Business Core Requirements(9 courses; 27 credits)

AC 11¹ Introduction to Financial Accounting
 AC 12¹ Introduction to Managerial Accounting
 IS 100^{1 or 2} Introduction to Information Systems
 FI 101² Introduction to Finance
 MG 101² Introduction to Management in Organizations
 MK 101² Principles of Marketing
 OM 101² Introduction to Operations Management
 BU 211³ Legal Environment of Business
 MG 300⁴ Business Strategies in the Global Environment

¹These courses should be completed in the first year.

²These courses should be completed in the second year.

³This course may not be taken until the junior year.

⁴This course may not be taken until the senior year.

Business major requirements (6 courses; 18 credits)

Descriptions and requirements of each of the six majors are detailed in the respective departmental sections that follow. Course descriptions are also included.

Business Elective (1 course; 3 credits)

Each of the majors in the Dolan School of Business requires the completion of one business elective course of three credits. This elective course may be taken from any business offering, including an internship, provided all prerequisites are met.

Free Electives (4 courses; 12 credits)

All business students must complete a minimum of four free electives totaling 12 credits. A free elective is a three- to four-credit course chosen by students without any restrictions related to their majors. Students can use the free electives towards a double major or a minor.

Courses specific to the departments of accounting (AC), finance (FI), information systems and operations management (IS or OM), management (MG), and marketing (MK) are described in the respective departmental sections that follow. Courses specific to the international studies/international business major are described under international studies in the College of Arts & Sciences section of this catalog. Courses beginning with the letter BU are described below.

Course Descriptions

BU 120 Environmental Management and Policy

The course provides an opportunity to consider environmental issues and decision-making from a business, economic, and policy perspective. Defining and proposing solutions to domestic and international environmental problems provides for different points of view and approaches that are discussed and debated. The course format combines readings, simulations, cases, in-class discussions, role-playing, and presentations. Three credits.

BU 211 Legal Environment of Business

This course examines the broad philosophical as well as practical nature and function of the legal system, and introduces students to the legal and social responsibilities of business. The course includes an introduction to the legal system, the federal courts, Constitutional law, the United States Supreme Court, the civil process, and regulatory areas such as employment discrimination, protection of the environment, and corporate governance and securities markets. (Prerequisite: junior standing) Three credits.

BU 220 Environmental Law and Policy

This course surveys issues arising out of federal laws designed to protect the environment and manage resources. It considers in detail the role of the Environmental Protection Agency in the enforcement of environmental policies arising out of such laws as the National Environmental Policy Act, the Clean Water Act, and the Clean Air Act, among others. The course also considers the impact of Congress, political parties, bureaucracy, and interest groups in shaping environmental policy, giving special attention to the impact of environmental regulation on business and private property rights. Three credits.

BU 311 The Law of Contracts, Sales, and Property

This course examines the components of common law contracts including the concepts of offer and acceptance, consideration, capacity and legality, assignment of rights and delegation of duties, as well as discharge of contracts. The course covers Articles 2 and 2A of the Uniform Commercial Code relating to leases, sales of goods, and warranties. The course also considers personal and real property, and bailments. (Prerequisite: BU 211) Three credits.

BU 312 The Law of Business Organizations and Financial Transactions

This course offers an analysis of legal principles related to the law of agency, sole proprietorships, partnerships, corporations, limited liability companies, and other business forms. The second half of the course addresses several sections of the Uniform Commercial Code, such as negotiable instruments, bank collections and deposits and secured transactions. Finally, the course examines the law of suretyship, debtor-creditor relationships, and bankruptcy. (Prerequisite: BU 211) Three credits.

BU 320 Employment Law and Discrimination in the Workplace

This course examines a variety of legal issues related to the workplace including the doctrine of employment at will, employee privacy, and the history and development of labor unions and the legal protections afforded by the National Labor Relations Act. A study of the role of the Civil Rights Act of 1964 and the Equal Employment Opportunity Commission in eradicating discrimination based on race, sex, religion, national origin, age, and disability occupies a major portion of the course. Other employment issues include affirmative action, worker safety, and compensation. This course meets the U.S. diversity requirement. Three credits.

BU 391 Seminar in Business Law and Ethics (capstone seminar)

This interdisciplinary study of these two aspects of the business environment is cross-listed as AE 391. Topics focus on the interaction of law and ethics, and the regulatory public policy issues in such areas as multiculturalism, work and family, the environment, product safety, international business, and advertising. This course is the capstone experience for students earning a minor in business law and ethics. (Prerequisites: AE 291, BU 211, two other courses in either law or applied ethics, or permission of the instructor) Three credits.

Requirements

Accounting Major

Accounting majors take courses appropriate for careers in public and private accounting, internal auditing, and government and not-for-profit accounting. Many students find that undergraduate studies in accounting are excellent preparation for a wide range of corporate positions.

For an 18-credit accounting major, students must complete:

- AC 203 Intermediate Accounting I
- AC 204 Intermediate Accounting II
- AC 310 Advanced Accounting
- AC 320 Cost Management
- AC 330 Auditing
- AC 343 Federal Income Taxation I

Accounting majors must maintain at least a 2.5 average in accounting.

Accounting Minor

The accounting minor offers students an extensive understanding of accounting content and function in areas of business. It is not designed to prepare a student for the Certified Public Accountant exam.

For a 15-credit accounting minor, students must complete:

- AC 11 Introduction to Financial Accounting
- AC 12 Introduction to Managerial Accounting
- AC 203 Intermediate Accounting I
- AC 204 Intermediate Accounting II
- AC 265 or 300-level accounting elective course

Accounting minors must maintain a 2.5 average in all accounting courses.

Accounting Information Systems Minor

The accounting information systems minor highlights the impact of technology on the accounting profession as well as the regulatory and internal control issues associated with accounting information.

For an 18-credit minor, students must complete:

- AC 11 Introduction to Financial Accounting
- IS 100 Introduction to Information Systems
- AC 203 Intermediate Accounting I
- AC 265 Accounting Information Systems
- IS 240 Systems Analysis and Logical Design
- IS 260 Database Systems

Accounting majors may double count AC 203 for the accounting major and the accounting information systems minor. Information systems majors may double count IS 240 for the information systems major and the accounting information systems minor. Accounting information systems minors may not declare a second minor in accounting or information systems.

Course Descriptions

AC 11 Introduction to Financial Accounting

This course introduces students to financial accounting. Students learn to read and comprehend published financial statements and are introduced to the financial reporting process. Topics include financial statement analysis; accrual accounting; revenue and expense recognition; and accounting for assets, liabilities, and equities. Three credits.

AC 12 Introduction to Managerial Accounting

This course introduces students to managerial accounting and the role of accounting information in managerial decision-making. Topics include a description of basic cost elements; the interrelationship between fixed costs, variable costs, and profit; and methods of accumulating the costs associated with producing products and providing services (e.g., activity-based costing), so that students can make recommendations about performance evaluation, project evaluation and other management decisions. (Prerequisite: AC 11) Three credits.

AC 203 Intermediate Accounting I

This course provides an in-depth study of financial accounting theory and concepts, and the presentation of financial statements in conformity with Generally Accepted Accounting Principles (GAAP). The course emphasizes balance sheet valuations and their relationship to income measurement and determination. (Prerequisite: AC 11) Three credits.

AC 204 Intermediate Accounting II

This course continues the in-depth study of financial accounting theory and concepts, and the presentation of financial statements in conformity with Generally Accepted Accounting Principles (GAAP) begun in AC 203. In addition to balance sheet valuation and income measurement issues, the course includes special topics such as earnings per share, accounting for income taxes, leases, and cash flows. (Prerequisite: C or better in AC 203) Three credits.

AC 265 Accounting Information Systems

This course analyzes the methods used to capture, process, and communicate accounting information in a modern business enterprise. Students learn to document business transaction cycles using data-flow diagrams and flowcharts. They analyze the accounting information system, identify weaknesses, and recommend improvements to internal control. Students process accounting information through a modern database management application program such as a general ledger package or an enterprise resource planning system. (Prerequisites: AC 12) Three credits.

AC 310 Advanced Accounting

This course focuses on accounting for various financial investments, including financial instruments, derivatives, and business combinations. Students also study the role of financial instruments in hedging foreign currency exposures and the complications encountered in financial reporting in a global environment. (Prerequisites: AC 204; junior or senior standing) Three credits.

AC 320 Cost Management

This course focuses on the proactive management of costs and the effect of costs on managers' decision-making, planning, and control. Students learn to accumulate costs and assign them to products and services using several different techniques such as activity-based costing. Other topics include profit planning and resource allocation through the budgeting process; the evaluations of organizational performance in cost, profit, and investment centers; and the importance of cost in the strategic management of the organization. (Prerequisites: AC 12, AC 203; junior or senior standing) Three credits.

AC 330 Auditing

This course introduces the audit of financial statements by independent CPAs. It bridges the gap between knowledge of accounting principles and the professional practice of accounting and auditing in the working world. Students learn about the role of auditing in society and the professional standards for behavioral and technical competence. They also study the factors entering into judgments about audit risk and the fair presentation of financial statement assertions. The course presents programs and procedures for defining audit objectives, gathering evidence, making decisions, and exercising professional skepticism. (Prerequisites: AC 204; junior or senior standing) Three credits.

AC 343 Federal Income Taxation I

This course introduces students to income tax, adjusted gross income, deductions from adjusted gross income, itemized deductions, property transactions, filing status and exemptions, passive activity losses, tax credits, and tax computations. The course also includes tax compliance and preparation considerations for individuals. (Prerequisites: AC 204; junior or senior standing) Three credits.

AC 344 Individual Taxation: Socioeconomic Applications

This course builds on the knowledge students obtained from AC 343 Federal Income Taxation I. In addition to reviewing the fundamentals of individual income tax theory and the associated various forms and schedules, the course will provide students with practical experience in preparing and filing individual tax returns and the procedures used to enforce the individual taxation system. Students will become familiar with using the tax forms, calculating different tax credits and deductions, and conducting research to answer tax questions. The course will also address different social, economic, and ethical perspectives of the taxation system. Students will apply professional tax software, and will be required to obtain the necessary certification and volunteer in a Volunteer Income Tax Assistance (VITA) site as tax preparers. (Prerequisites: AC 343; junior or senior standing) Three credits.

AC 345 Federal Income Taxation II

This course continues the study of taxation begun in AC 343. The topics include formation of the corporation, distributions, liquidations, and reorganizations. The course covers tax return preparation, tax planning, research, and compliance issues throughout, and also includes personal holding companies, Subchapter S corporations, and partnerships. (Prerequisites: AC 343; junior or senior standing) Three credits.

AC 380 Municipal and Not-for-Profit Accounting

This course examines accounting theory and concepts, and the reporting principles promulgated by the Financial Accounting Standards Board (FASB) as they relate to voluntary health and welfare organizations, healthcare organizations and universities and all types of not for profit organizations. Learning will be enhanced by a service learning experience. (Prerequisites: AC 204; junior or senior standing) Three credits.

AC 391-394 Accounting Internship

Students gain practical experience in accounting. (Prerequisites: accounting major, junior standing, minimum overall GPA of 2.5) One to eight credits.

AC 397-398 Independent Study in Accounting

This course provides students with the opportunity to study and research a specialized topic under faculty guidance. (Prerequisites: accounting major, senior standing, minimum overall GPA of 2.5, and approval) Three or six credits.

Requirements

Finance Major

Finance majors study the theory and practice of financial management and investments. Additionally, they analyze actual case histories of the financial operations of several different companies. The courses included in this major area prepare students to enter into financial management positions with corporate or governmental organizations.

For an 18-credit major in finance, students complete:

- FI 210 Principles of Investments
- FI 215 Financial Management
- FI 330 Case Studies in Finance

Any three* courses chosen from

- FI 200 Global Capital Markets
- FI 220 Working Capital Management
- FI 240 International Finance
- FI 310 Portfolio Analysis
- FI 315 Futures and Options Markets
- FI 320 Financial Modeling
- FI 325 Seminar in Real Estate

*At least one elective must be a 300-level course.

Finance Minor

This minor offers students the opportunity to complement their major by studying financial theory and its application to decision-making. The investment and financing decisions of organizations are emphasized.

For a 15-credit minor in finance, students complete:

- FI 101 Introduction to Finance
- FI 210 Principles of Investments
- FI 215 Financial Management

Two finance courses selected from the following:

- FI 200 Global Capital Markets
- FI 220 Working Capital Management
- FI 240 International Finance
- FI 310 Portfolio Analysis
- FI 315 Futures and Options Markets
- FI 320 Financial Modeling
- FI 325 Seminar in Real Estate

*Students should note that AC 11, EC 11, EC 12, and one math course are prerequisites for FI 101.

Course Descriptions

FI 101 Introduction to Finance

This course provides the building blocks for understanding the role of finance in the domestic and international environments. Specifically, in a qualitative and quantitative manner, this course addresses the three interrelated fields of finance, namely: the financial markets, investments, and business finance. Emphasis is given to such issues as forecasting and planning; investment and financing decisions; and interaction with capital markets. (Prerequisites: sophomore standing, AC 11, EC 11, EC 12, one math course.) Three credits.

FI 190 Personal Finance

This course for non-majors covers financial decision-making from a personal standpoint. The course examines investments including stocks, bonds, housing purchases, and mutual funds with an emphasis on the elementary financial principles of risk and return. Other topics include life, health, and other insurance needs, and pension and estate planning. Three credits.

FI 200 Global Capital Markets

With the rate of financial innovation and globalization, increasing financial instruments and institutions are becoming international in nature and scope. This course surveys a variety of financial instruments, institutions, and markets from a global perspective and covers the relationship between financial intermediaries and central banks. Students review the use of traditional and new financial instruments in the context of the specific markets they serve. (Prerequisite: FI 101) Three credits.

FI 210 Principles of Investments

This course offers a general view of the operation of security markets and the factors that influence security prices. Further, it includes basic analysis and valuation of stocks, bonds, options, and futures. The course also provides an introduction to the tools and techniques that can be used to measure performance, manage risk, and construct efficient portfolios. (Prerequisite: FI 101) Three credits.

FI 215 Financial Management

The analysis of optimal financial decision-making for corporate financial managers emphasizes corporate investment, financing, and dividend decisions within the framework of efficient capital markets. Further, the course explores the topics of cash budgeting, real options, economic value added, mergers and acquisitions, bankruptcy, and corporate risk management. (Prerequisite: FI 101) Three credits.

FI 220 Working Capital Management

This course examines the management of current assets and current liabilities and emphasizes cash and marketable securities management, cash budgeting, inventory control, accounts receivable management, and short-term and intermediate-term financing. (Prerequisite: FI 101) Three credits.

FI 240 International Finance

This course deals with the international aspects of corporate finance. Topics include foreign exchange with emphasis on exchange rate determination, exchange rate risk management, international money and capital markets, international capital budgeting, cost of capital, and international trade financing. (Prerequisite: FI 215) Three credits.

FI 310 Portfolio Analysis

This course deals with the principles and applications of modern portfolio theory from the point of view of both the institutional and the individual investor. More specifically, the course analyzes portfolio objectives, efficient portfolio construction, performance evaluation, and portfolio risk management using derivatives. (Prerequisite: FI 210) Three credits.

FI 315 Futures and Options Markets

This course deals with options and futures on financial assets, as well as commodities. The course covers the basic uses of these instruments and the various pricing methodologies based on equilibrium conditions. (Prerequisite: FI 210) Three credits.

FI 320 Financial Modeling

The course emphasizes extensive Excel-based valuation including the analysis and projection of financial statements, scenario analyses, and simulations including the use of simulated trading software for corporate valuation and investment analysis. Data for analyses are obtained from sources such as Reuters, Datastream, and Compustat. Contemporary issues in valuation may also be explored, including real options, EVA, and hedging. The course culminates in a team project such as the pricing of publicly traded company, valuation of a small business or a merger and acquisition. (Prerequisite: FI 215) Three credits.

FI 325 Seminar in Real Estate

This is an upper level finance course that will provide an in depth analysis of real estate debt and equity markets. Both primary and secondary markets will be studied. The course will cover the following topics: analysis of real estate markets; valuation of residential and commercial real estate, investment and financing of residential and commercial real estate property; application of financial mathematics to the calculation of payment streams, mortgage yields, outstanding loan balances, equity returns and other basic financial measurements; secondary mortgage market - securitization and the market for residential and commercial mortgage backed securities; Real Estate Investment Trusts - legal and institutional framework of the REIT industry and the analysis of REIT returns. Special attention will be paid to developing a comprehensive approach to solving financial problems and critically assessing theory and its limitations when applied to real world problems. (prerequisite FI101, FI215, junior or senior standing).

FI 330 Case Studies in Finance

This course examines and applies the principles developed in financial management and investments in a domestic and international context with the objective of integrating finance practice and theory using case studies. Simulations are used including trading simulations. (Prerequisites: FI 210, FI 215, and senior status) Three credits.

FI 391-394 Finance Internship

Students take up to two semesters of a department-approved internship. Students must have a GPA of 2.5 or higher, have junior standing, and complete an internship in their major area. One to eight credits.

FI 397-398 Seminar in Finance

This is a special program that involves contemporary or specialized topics in finance and may be offered as an independent study format under faculty guidance. (Prerequisites: open only to seniors majoring in finance, with approval by the department chair. Students must have an overall grade point average of 2.5 or better.) Three or six credits.

Requirements

Information Systems Major

The Information Systems major prepares students to design and deliver business solutions that integrate people, processes, and technology. Students learn to:

- identify and analyze business opportunities,
- acquire and assess business solutions,
- lead and facilitate strategic initiatives,
- enable informed decision making, and
- manage relationships with technology providers and customers

Information systems majors study the analysis, design, development, and management of information systems in organizations. They develop an understanding of the need for information, its use in the decision-making process, and the procedures by which information is provided to management.

For an 18-credit major in information systems, students complete:

- IS 240 Systems Analysis and Logical Design
- IS 260 Database Systems
- Two elective courses from information systems or operations management offerings.

Any two of the following upper-division courses:

- IS 310 E-business Applications
- IS 320 Systems Design and Implementation
- IS 395 Systems Project

Students must maintain at least a 2.5 average in all information systems and operations management major courses.

Information Systems Minor

This minor complements the other disciplines within the school. It provides students with the knowledge and skills to actively participate in the design and delivery of integrated business solutions in their major field.

Students earn a 15-credit information systems minor by completing:

- IS 100 Introduction to Information Systems
 - IS 240 Systems Analysis and Logical Design
 - IS 260 Databases and Data Management
 - Two elective courses from information systems and operations management offerings.
-

Accounting Information Systems Minor

The accounting information systems minor highlights the impact of technology on the accounting profession as well as the regulatory and internal control issues associated with accounting information.

For an 18-credit minor, students must complete:

- AC 11 Introduction to Financial Accounting
- IS 100 Introduction to Information Systems
- AC 203 Intermediate Accounting I
- AC 265 Accounting Information Systems
- IS 240 Systems Analysis and Logical Design
- IS 260 Database Systems

Accounting majors may double count AC 203 for the accounting major and the accounting information systems minor. Information systems majors may double count IS 240 for the information systems major and the accounting information systems minor. Accounting information systems minors may not declare a second minor in accounting or information systems.

Operations Management Minor

This minor leads to an understanding of the central role technical and functional skills play within the global environment to produce quality products and services in business unit operations.

Students earn a 15-credit operations management minor by completing:

- IS 100 Introduction to Information Systems
- OM 101 Operations Management
- OM 140 Project Management
- IS 210 Business Analytics with Spreadsheets Software
- OM 340 Service Operations

Course Descriptions

IS 100 Introduction to Information Systems

This course helps students understand the role of Information Systems in the contemporary business environment. It introduces them to the use of information systems concepts and techniques in solving a wide range of business problems. Working in small teams, students develop, analyze, and present solutions to a business problem using information technology. Three credits.

IS 135 Fundamentals of Web Design

Students learn the theory and practice of front-end web design. Theoretical content will primarily focus on website design, with a heavy emphasis on developing sites that conform to standards and are responsive to the needs of practical applications and mobile devices. Hands-on work will help develop technical skills, such as HTML, CSS, XML, and other web client technologies. Students will learn to use a professional-quality toolset and to follow generally accepted best practices. The course includes weekly web-programming assignments and a semester project. Three credits.

IS 210 Business Analytics with Spreadsheets Software

This course focuses on modeling and analyzing business problems using spreadsheet software, such as Excel and its add-ins. Topics include descriptive analytics, visualizing and exploring data, predictive modeling, regression analysis, time series analysis, portfolio decisions, risk management, and simulation. Business models relevant to finance, accounting, marketing, and operations management are set up and solved, with managerial interpretations and "what if" analyses to provide further insight into real business problems and solutions. (Prerequisite: one course in statistics) Three credits.

IS 220 Technology and Society

This course examines the developmental stages of different technologies and their effects on society. Topics include the use of technology to solve social problems in the developing world. The role of technology in the solution of social problems is also explored in such areas as health, environment, communication, education, war, and politics, and gender and ethnic relations. The readings and resulting class discussions focus on technological solutions of contemporary social problems and the moral dilemmas those choices often generate. Special attention is given to the student service project that will be completed during the semester, and to the weekly written reflections. This course meets the U.S. diversity requirement. Three credits.

IS 240 Systems Analysis and Logical Design

This course focuses on the introduction of new systems and technology into the firm. Students learn to analyze and design information systems to meet specific business needs. Coverage includes structured and object-oriented methodologies, with an emphasis on current best practice. CASE tools employing the Unified Modeling Language are used as appropriate. As part of a semester project, students analyze requirements for an information system of moderate size and complexity, and then architect and evaluate alternative systems that meet the requirements. The semester projects are "juried" by a team of experienced professionals from the field. (Prerequisite: IS 100) Three credits.

IS 245 Business Telecommunications and Networks

Students learn the fundamentals of the telephone system and its relationship to computer networking. Students acquire an understanding of LANs, MANs, WANs, wireless networking, network security, and the international standards and protocols related to networking, and discuss management of small and enterprise networks. Students implement a LAN to connect several computers in a classroom and add a wireless device to that network. Students learn how to evaluate, select, and implement different networking options. (Prerequisite: IS 100) Three credits.

IS 260 Database Systems

This course introduces the concepts of data modeling, as they apply in the business world, within the context of a client/server environment. Topics include relational databases, object-oriented databases, and Internet databases, along with the Structured Query Language that is used to create and manipulate databases. Students are also introduced to the architecture of Data Warehouses. Formerly IS 340. (Prerequisite: IS 100) Three credits.

IS 300 Special Topics in Business Computing

In this course students study opportunities and problems created by the increasingly widespread use of computers. They examine new developments and/or current practices in computer and information science. A topic is selected for thorough study; subject areas may include data structures, recent hardware or software advances, and specialized applications. (Prerequisite: IS 100) Three credits.

IS 310 E-business Applications

This course examines e-business applications such as knowledge management, enterprise resource planning (ERP), customer relationship management (CRM), and mobile applications in inter-organizational, national, and global business environments. Students explore new e-business applications, the economics of e-business, value chains and value networks, related legal and ethical issues, information privacy and security, disaster planning and recovery, and the impact of emerging e-business and mobile applications. The course includes a brief introduction to technical architecture, technology, solutions, and financing required for effective e-business applications. Students investigate emerging opportunities, challenges, and trends through interactive team exercises, case studies, and individual research projects and presentations. (Prerequisite: IS 100) Three credits.

IS 320 Systems Design and Implementation

Students work in collaborating teams to design and build a networked information system. Emphasis is placed on development as an ongoing iterative and incremental process. Standard CASE tools, design patterns, and business practices are used to ensure proper communication and integration across development teams. (Prerequisites: IS 260, IS 240, and a programming course) Three credits.

IS 350 International Information Systems

This course investigates information technologies in a variety of international business environments. The course content includes national infrastructures and discrete information cultures in advanced and developing economies. The social, economic, and political impacts of information technologies outside the United States are examined, with an emphasis on appropriate systems design and control. The course covers contemporary issues such as privacy, security, the protection of intellectual property, and national information policies extensively. This course meets the world diversity requirement. (Prerequisite: IS 100) Three credits.

IS 391-394 Information Systems Internship

Students may take two semesters of internship, approved by the department. Students must have a GPA of 2.5 or higher, have junior standing, and complete the internship in their major area. One to eight credits.

IS 395 Systems Project

This course applies skills that have been learned in the information systems major and the business core. These skills span the areas of project management, systems analysis, systems design, business communication, organizational behavior, software development, operations management, and business processes. Students demonstrate their knowledge by engaging in a student-defined project that provides a business solution for a client. The primary deliverables for the course are a system or a set of alternatives to solve the business problem, along with all related documentation. (Prerequisites: IS 240 and senior status) Three credits.

IS 397-398 Seminar in Information Systems

This special program involving independent study and research is also intended for students accepted in an approved internship. This course, administered by the Office of the Dean, requires a formal application by the student to the faculty project advisor and the department chair. The course does not count toward fulfilling the requirements for the information systems major, but does count toward meeting University credit requirements. (Prerequisite: open only to seniors majoring in information systems and approved by the department chair) Three or six credits.

IS 399 Independent Study in Information Systems

Students pursue topics of special interest through independent study, research, and/or completion of an information systems project under the supervision of a full-time faculty member. The department chair and dean must approve the work. The student and a faculty project advisor who agrees to conduct the work according to a mutually agreeable schedule must complete an application form. Once the form is completed and submitted to the registrar, the student may register for the course, which is taught during the fall and spring semesters. If any work is expected to occur at any time other than the semester registered, students must obtain the approval of the faculty project advisor and the department chair prior to commencing of any work. Normally, students completed at least two advanced information systems courses before taking this course. Three credits.

OM 101 Operations Management

This course provides the primary exposure to service and manufacturing operations management within the business core curriculum. Topics include process modeling, quality management and control, decision analysis, capacity planning, supply chain management, and project planning and control. Special attention is given to showing how concepts and models presented in lectures and readings apply to real-world business situations. Examples of international operations are studied, and ethical issues are explored within the context of decisions such as where to locate facilities. (Prerequisites: sophomore standing and one statistics course) Three credits.

OM 140 Project Management

This course introduces students to project management and its role in business operations, with applications in such functional areas as accounting, finance, information systems, management, and marketing. Topics include the linkage between projects and organizational strategy, project planning and scheduling, project development and implementation, applying best practices and tools, evaluation methodologies and control techniques, and critical success factors. Special attention is given to showing how concepts and models presented in lectures and readings apply to real-world projects. (Prerequisite: one statistics course) Three credits.

OM 340 Service Operations

This course examines service sector industries such as financial services, healthcare, retailing, and education. It focuses on the associated operational challenges related to high labor intensity, variable demand patterns, high degrees of customer contact, and subjectively determined quality. (Prerequisites: IS 100, and BU 225 or OM 101) Three credits.

OM 345 Global Logistics and Supply Chain Management

This course introduces students to logistics management and identifies the relationships between logistics and the other functions of the firm, particularly marketing and operations management. The course covers strategic and operational issues in logistics and supply chain management, including logistics and supply chain design, logistics of customer service, transportation management, demand forecasting, inventory management, order processing, warehousing and materials handling, and facility location. The course examines recent developments in logistics, including third party logistics. (Prerequisites: IS 100, and BU 225 or OM 101) Three credits.

OM 350 Strategic Management of Technology and Innovation

This course enables students to understand and to manage innovation at the operational and strategic levels of an organization. It integrates the management of market, technological, and organizational changes to provide a framework for improving the competitiveness of firms and effectiveness of organizations. It emphasizes an effective transition from research and development to successful products and services. The course adopts a competence-based approach to technology management and focuses on internal structure as well as external linkages and processes. (Prerequisite: IS 100) Three credits.

The International Studies Program at Fairfield University draws from a group of interdisciplinary faculty, practitioners, and students from many parts of the world with a commitment to thinking critically about global challenges, promoting social justice, and service. Students enrolled in the Dolan School of Business have the opportunity to pursue the major in International Business with a co-curricular major or minor in the Dolan School of Business. The International Business major seeks to heighten global awareness in the ways we situate ourselves geographically, and encounter conflict, gender, race, class, nationality, environmental challenges, as well as business and economic development.

Requirements

Students majoring in International Business begin with foundational coursework in international relations, economics, geography, and sociology/anthropology, and complete their degree requirements with a senior research project. To prepare for this, they develop their own specialization taking one theory and one applied course from the thematic areas of Global Development; Conflict, Diplomacy, and Peace building; and Social Justice and Humanitarianism; and by choosing a complementary major or minor (with at least one course that has an international focus) in the Dolan School of Business. Students take courses on multinational organizations and regional trade pacts, economic and political systems, socio-cultural structures, microfinance, and other diversities that have operational significance for community and economic development and international business.

Complementary Studies and International Opportunities

The International Studies Program reinforces multidimensional learning with real-world experience through foreign language studies, service learning, Model United Nations, the Fairfield Journal of Global Citizenship, internships and study abroad opportunities, and through work with our faculty in research projects and as student teaching assistants.

Graduation with Honors

Fairfield University has a campus chapter of Sigma Iota Rho, the national honor society for international studies. Students must have attained a junior standing and completed at least twenty-one hours of course work toward the International Studies/Business major, and nine hours towards the International Studies minor. Students with an overall GPA of 3.3 or greater and a GPA of 3.4 or higher in their International Studies/Business major or International Studies minor are nominated for membership.

Requirements include:

For a major in International Business, students complete:

- IL 50 People, Places and Global Issues
- IL 51 International Relations: Theories and Challenges
- IL 52 Culture and Political Economy
- EC 11 Introduction to Microeconomics (required for all business students)
- EC 12 Introduction to Macroeconomics (required for all business students)
- IL 300 Senior Capstone Seminar
- Choose 2 electives from any of the 3 thematic areas, with 1 theory and 1 applied course
- Choose a co-curricular major or minor in the Dolan School of Business that includes at least one course with an international focus.

International Business courses completed abroad must be pre-approved by the assistant dean of the Dolan School of Business and the Director of International Studies.

Suggested Course of Study**Freshman Year**

- EC 11 and EC 12

Sophomore Year

- IL 50, 51 or 52 (take two of these in sophomore year if studying abroad in junior year)

Junior Year

- IL 50, 51 or 52 (complete any of these remaining foundational courses)
- Choose 2 electives from the thematic areas (one theory and one applied course)

Senior Year

- Complete any remaining electives from the thematic areas (one theory and one applied)
- IL 300 Capstone

Course Offerings**Foundational Courses**

IL 50 People, Places and Global Issues

IL 51 International Relations: Theories and Challenges (cross-listed with PO 130)

IL 52 Culture and Political Economy (cross-listed with AY 52)

EC 11 Introduction to Microeconomics (required for all business students)

EC 12 Introduction to Macroeconomics (required for all business students)

IL 300 Capstone

Course Descriptions

IL 50 People, Places and Global Issues

This course introduces students to some of the fundamental concepts of International Studies. Major world regions and selected countries within them are discussed with respect to the people, and their physical, demographic, cultural, political, and economic characteristics. Several concepts and global issues are explored, among which the physical environment, conflict, inequality, global interconnectedness, and the movement of goods and people across borders are central. This course will emphasize contemporary events, particularly as they relate to the fundamental themes covered. The course meets the world diversity requirement. Three credits.

IL 51/PO 130 Challenges of Global Politics

This course introduces International Relations (IR) theories to students, providing concepts, frameworks and approaches that will help them make sense of global politics historically and today in a systematic and critical manner. The goal of the course is to familiarize students with these tools and to help them use them to understand and address challenges at a global scale, particularly different manifestations of violence, development and social injustice, including from war to economic, social, gendered, and political marginalization. Three credits.

IL 52 Culture and Political Economy

This course examines the ways in which global political economic dynamics impact local cultures. Students will begin with classic texts in social theory, examine how this theory informs contemporary debates, and look to small-scale societies in the Global South for an intimate, ethnographic perspective of our global era. Three credits.

IL 53 Introduction to Economics

This course introduces the fundamentals of economic analysis from individual consumer behavior to the choices firms make, as well as framing the aggregate economy and indicators that measure global economic activity. It will cover the basics of both micro and macro economic study. Supply and demand, market structures, international trade, fiscal, and monetary policy are introduced. Three credits.

IL 150 International Operations of Non-Profits

This course introduces students to the environment of international not-for-profit organizations. The course examines the relationships between non-profits and the private and public sectors. Accountability is discussed in terms of short-term financial efficiencies and long-term program quality assessment. Course objectives include understanding internal and external environments in which non-profits operate; the relationship between non-profits with the public and private sectors; acquiring skills for accounting and financial information in the non-profit sector; understanding roles, performance and accountability issues of nongovernmental organizations in international development assistance; and developing case study analyses. Three credits.

IL 151/PO 132 Gender, War, Peace

This course examines the complexities and gendered impact of war on children, family and other social actors, drawing on a wide range of theories, concepts and case studies on violence, conflict escalation and peacebuilding. Part I examines the multifaceted forces of globalization, structural violence and gender based violence (GBV) that set up the gendered dynamics of war. Part II draws from this framework to understand the fluid contexts of gender and violence in war, including sexual violence. It looks at how people try to remain safe from armed conflict and marauding bands of rebels or soldiers, and the difficulties of sorting victim from perpetrator. Part III examines theories of social justice in the aftermath of war, and policies that can lead to improved security, safety, health, rehabilitation and reconstruction. Course requirements include exams and a research paper on the theory and policy implications of gender in war and its aftermath. The course meets the world diversity requirement. Three credits.

IL 152 International Human Rights

This course is devoted to an examination of basic human rights philosophy, principles, instruments and institutions. It introduces students to the origins and development of international human rights; the need to apply and enforce legal obligations and establish accountability for human rights violators; and the procedures enforced by the international community for human rights violation. Students will engage in focused discussions and debates on contemporary issues of human rights, such as Environmental Rights, Women's Rights, Rights Against Trafficking, and Economic Rights. The final part of the course includes a special focus on U.S Foreign Policies on Human Rights, concluding with Guantanamo. As part of the research requirements of the course, students will focus on human rights for which they want to be advocates and/or in which they want to be engaged. Three credits.

IL 197 United Nations Security Council Crisis Simulation

This course gives students a hands-on learning experience in world diversity by simulating a United Nations Security Council crisis in international peace and security. The objective is to introduce students to the challenges of global governance in light of the different perspectives they encounter representing different constituencies of the UN Security Council who come from diverse cultural, historical, and geo-political regions of the world. A key goal of the course is to bring to light whether and how power disparities limit the global South's effective representation, and the stakes in reform of the Security Council. While the topic of the simulation will vary, the focus is on a crisis in a non-Western region of the world. This course meets the world diversity requirement. Three credits.

IL 260/HI 274 Historical Perspectives on Contemporary Crises

Using topical, geographic, and critical approaches, this course examines the interaction of the United States and Western Europe with the rest of the world in the 20th century, giving considerable attention to non-Western perspectives such as those of Asia, Africa, Latin America, the Arab world, Russia, and Eastern Europe. The course includes an introduction to the history of U.S. foreign relations, international organizations, social change in the developing world, and world systems theory. Three credits.

IL 280 Global Leadership for Research and Project Development

The course equips students to prepare prestigious international grants and fellowship projects that will make a difference in the world. Students develop their own ethical global imagination on transformational leadership. The course covers a variety of theoretical approaches and methodologies for research and project development informed by feminist, gender, cultural competency, power, race, class, ability/disability, and critical pedagogical perspectives. The students choose the grant or fellowship that is the focus of their project, along with the particular topic (puzzle) and research question. (Prerequisite: junior standing or permission of instructor). Three credits.

IL 295 Seminar in International Studies

The course examines special topics in international studies. The specific topic for a given semester is announced at the time of registration. The course may be repeated with permission of the program director. Three credits.

IL 298 Internship in International Studies

Students accept placements with local organizations, government agencies, or non-profit organizations in positions with an international component. Interns learn to apply knowledge acquired in their course of study to real-world situations. Completion of the internship requires regular meetings with the supervising faculty member, submission of a work log, and one paper. Note: Students complete the internship in addition to the basic requirements for the major or minor. (Prerequisites: junior or senior status and a 2.8 GPA) Three credits.

IL 299 Independent Study

Students pursue an independent research project on international issues under the supervision of a faculty member. Open to juniors and seniors with the director's permission. Three credits.

IL 300 Senior Capstone Seminar

This course requires students to theorize and analyze emerging trends in the political, socio-cultural, economic, and business dimensions of global affairs, and develop the implications in a particular context or setting. Students undertake a major research project as a central activity in this course drawing on the expertise and research methodologies they have developed in International Studies. This course is offered the senior year after students have completed all core courses in international studies. Three credits.

Requirements

Management Major

Management majors study the theory and the practice of managing people and organizations. Emphasis is given to the nature of the management function; the management of people; the relationship between business and society; and to the behavioral, social, and environmental factors that influence effective organization and managerial performance. Research efforts in the field are examined to develop fundamental principles and concepts, which can serve as a rational basis for managerial action. Students may choose one of three concentrations: human resource management, business and society, or entrepreneurship.

For an 18 credit management major, students complete:

- MG 235 Managing Human Resources for Competitive Advantage
- MG 240 Leading and Managing People
- MG 340 Critical Issues in Management

Plus three more Management courses to complete the general management major. Students are not required to pursue a concentration. Two courses are required from a concentration area in order to receive the concentration notation; the third course can be from any management area. No course may count for more than one concentration.

Minors

Management Minor

This minor offers students in the non-management disciplines an opportunity to examine some of the theories, principles, and issues that influence their growth and development as managers in their chosen fields.

For a 15-credit management minor, students complete:

- MG 101 Introduction to Management in Organizations
 - MG 235 Managing Human Resources for Competitive Advantage
 - MG 240 Leading and Managing People
-

Two other courses from:

- BU 220 Environmental Law and Policy
- BU 320 Employment Law and Discrimination in the Workplace
- BU 391/ AE 391 Seminar in Business Law and Ethics
- MG 301 Topics in Business and Society
- MG 302 Topics in Human Resources
- MG 303 Topics in Management
- MG 320 Diversity in the Workplace
- MG 330 Career Development
- MG 335 Entrepreneurship and Small Business Management
- MG 336 Social Entrepreneurship
- MG 337 Technology Ventures
- MG 338 Managing a Family Business
- MG 350 International Law
- MG 355 Organizational Culture
- MG 360 Negotiation and Dispute Resolution
- MG 365 Ethics and Technology in Business
- MG 370 Managing Nonprofit Organizations
- MG 380 Performance, Compensation, and Reward
- MG 385 Managing People for Global Business
- MG 390 Cross-Cultural Management

Business Law and Ethics Minor

This minor offers students a foundation in law and regulation, as well as ethics, applied to the business sector to better understand the social responsibility of business and the interdependent nature of business and society. For an 18-credit minor in business law and ethics, students must complete:

- BU 211 Legal Environment of Business
- AE 291 Ethics in Business Management
- BU/ AE 391 Seminar in Business Law and Ethics
- Three courses from the following groups (no more than two courses can be selected from each group).

Group 1

- BU 220 Environmental Law and Policy
- BU 311 The Law of Contracts, Sales, and Property
- BU 312 The Law of Business Organizations and Financial Transaction
- BU 320 Employment Law and Discrimination in the Workplace
- MG 350 International Law

Group 2

- AE 276 Ethical Dimensions of Global Business Policy
- AE 281 Ethics of Communications
- AE 282 Ethics and the Computer
- AE 284 Environmental Ethics
- AE 295 Ethics in Law and Society
- AE 384 Seminar in Environmental Law, Economics, and Policy
- MG 365 Ethics and Technology in Business
- Other law or ethics courses by permission of the program director.

One course may double count for the business law and ethics minor and the management major.

Entrepreneurship Minor

This minor offers students across the University exposure to entrepreneurship, from concepts of creativity, technology, and innovation to implementing business plans. Students may explore opportunities in both the for- and non-profit sectors.

For a 15-credit Entrepreneurship Minor, students must complete:

- MG 335 Entrepreneurship and Small Business Management
- BU 211 Legal Environment of Business
- * Non-management majors choose one course from Group 1, two courses from Group 2. Management majors choose three courses from Group 2. No courses may double count for the entrepreneurship minor and the management major.

Group 1

- MG 101 Introduction to Management (allowed for non-DSB students only)
- MG 235 Managing Human Resources for Competitive Advantage
- MG 240 Leading and Managing People

Group 2

- MG 336 Social Entrepreneurship
- MG 337 Technology Ventures
- MG 338 Managing a Family Business
- BU 320 Employment Law and Discrimination in the Workplace

*It is strongly recommended that students take the BU 211 Legal Environment of Business section with Entrepreneurship emphasis.

Course Descriptions

MG 101 Introduction to Management in Organizations

This course integrates, through theory and its application, the various topics, concepts, and modalities that make up the Management discipline. Its purpose is twofold: 1) to provide all business students with a strong grounding in how individuals and organizations function to support the strategic goals of business, and 2) to provide a foundation for further study by management majors and minors. The course introduces students to team/group work; the relationship of business to local, national, and global communities; the ethical implications of business decisions and models; organizational behavior; human resource management; leadership and organizational culture. (Prerequisite: sophomore standing) Three credits.

MG 235 Managing Human Resources for Competitive Advantage

This course introduces students to how effective management of people can contribute to firm performance and competitive advantage. The course explores human resource management activities: human resource planning, recruiting, selection, training, performance appraisal, compensation, and labor relations. Through extensive use of cases, simulations, and exercises, students actively learn to implement various human resource management strategies to better serve organizational and employee interests. (Prerequisite: junior standing) Three credits.

MG 240 Leading and Managing People

This course prepares students for the task of leading and managing people. The purpose of the course is to address advanced organizational behavior topics as well as to illuminate the research and practice associated with effective leadership. The first segment of the course reviews the leadership literature, including trait theory, aspects of leadership style, leader emergence, contingency theories, and charismatic/transformational leadership practices. The second segment involves skill practice in managing people in the areas of communication, conflict resolution, empowerment, delegation, influence, teamwork, problem solving, and diversity issues. The third and final segment explores strategic leadership from the CEO perspective, and addresses how leaders create change and transform organizations. (Prerequisite: junior standing) Three credits.

MG 300 Business Strategies in the Global Environment

This capstone course, required for senior level students in the School of Business, integrates the business core through the concept of strategic management. It offers an opportunity for students to put together all they have learned in their discipline and to see the "big picture" of how business organizations function. The primary goal is to prepare students to think like top managers and to understand that strategic decision-making encompasses all parts of the organization, internal and external, bringing together all disciplines of management. The course includes lectures, readings, cases, and a capstone group project. (Prerequisites: matriculation in a business program, senior status, completion of business core, or permission of the instructor) Three credits.

MG 301 Topics in Business and Society

This course gives students an in-depth understanding of current issues or topics in the area of business and society. The faculty member teaching this course constructs course content around current developments in his or her research, thus providing students with breaking information about cutting-edge issues in the field and, when appropriate, with an opportunity to participate in the research process. Topics may include business ethics and technology; social and political implications of corporate structure and decision-making; socially responsible investing; and gender constructs and management. (Prerequisites: juniors or seniors with a concentration in business and society or permission of the instructor) Three credits.

MG 302 Topics in Human Resources

This course examines topics in human resource management as they relate to contemporary organizations. The course gives students an in-depth understanding of current issues or topics in the area of human resources, giving special attention to the strategic aspect of human resource management: how human resources can create value for the organization. Topics may include strategic human resource management; human resource systems; human resource planning; quality of work life; flexible work; diversity; affirmative action; legal aspects of employment; and work-family issues. (Prerequisite: junior standing) Three credits.

MG 303 Topics in Management

This course gives students an in-depth understanding of current issues and topics in management. The focus is on the application and analysis of managerial principles in contemporary problem solving. The faculty member teaching this course constructs course content around current developments in his or her research area. Topics may include decision-making in a chaotic environment; change management; organizational structure and design; health care; social justice; the political and social context of organizations; the consequences of the free market logic; leadership; the environment; diversity and gender; e-business; and managing virtual teams and organizations. (Prerequisite: junior standing) Three credits.

MG 320 Diversity in the Workplace

This course allows questions to be framed, and answers sought, with regard to the challenge of diversity in the work environment. The course uses readings, exercises, and real-world projects to formulate the following: a definition of diversity; an awareness of its impact on businesses and their managers; the identification of the challenges that diversity presents and the opportunities it allows for even more productive workplace interactions; and the necessary skills, attitudes, and patterns of critical thinking needed for effective leadership in this important area. The course presents issues in the specific real-life context of ethnic, racial, gender, and class groups. This course meets the U.S. diversity requirement. (Prerequisite: junior standing) Three credits.

MG 330 Career Planning

This course prepares students for the job search while exploring theoretical issues in career development over the life span. Theories of career development covered include: life stage and career stage models, aspects of politics that shape careers, issues of derailment, technical career paths, gender issues in careers, mentoring, and new career models, such as the boundaryless career, the protean career, and the kaleidoscope career. Students undertake a resume revision process, develop a sample cover letter, participate in workshops on Internet job searching techniques, and practice mock interviews. An in-class session with members of the Career Planning Center is included. Students may also receive credit for a job shadowing assignment, attendance at Career Fairs, and other career-related activities. (Prerequisites: junior standing; MG 240 or MG 235; or permission of the instructor) Three credits.

MG 335 Entrepreneurship and Small Business Management

This course raises student awareness of the problems, opportunities, policies, and practices of the small-business enterprise and its unique role in the free enterprise system. The small-business firm is examined from conception of the opportunity to operation of the firm, including the creative idea, feasibility studies, the development of the business and financial plan, launching the venture, and managing the firm. Participants study case problems of small-business firms. (Prerequisite: junior standing) Three credits.

MG 336 Social Entrepreneurship

This course examines the tremendous opportunities that exist for creating value in the social sector. Using entrepreneurial frameworks and business metrics, social entrepreneurs are effecting change in domains that markets have failed to address. The objective of this course is to sensitize students to ways that firms can influence societal outcomes while continuing to be revenue generating, self-sustaining enterprises. The primary learning strategy will be through case presentations and discussions of current social entrepreneurs and their organizations. During the term, students will develop a business plan to support a viable social enterprise. (Prerequisite: junior standing) Three credits.

MG 337 Technology Ventures

This course focuses on those skills necessary for success in technology entrepreneurship, beyond traditional business skills and entrepreneurial enthusiasm. These include managing an array of uncertainties including technology, market, resource and organizational. The primary objective of this course is to give students the formalized training necessary to understand and manage these uncertainties. Coursework will include exercises that require students to identify an unmet or underserved market need and a potential technological solution to serve this need with the goal of helping students establish the basis for new venture creation or product launch. This class will discuss both technology push and market pull innovations. The course will progress from technology development/acquisition, through market assessment, business model development, venture funding, and finally, preparation to launch. (Prerequisite: junior standing) Three credits.

MG 338 Managing a Family Business

This course provides a foundation for understanding family businesses, which represent over 80% of the world's free economies. The dynamics of first generation start-ups or multi-generational family businesses are often unique, yet tenuous to manage. Regardless of whether you are a member of the managing family or assuming a position within the firm, comprehension of the idiosyncrasies of successfully managing their complex operations is imperative. Through class discussions, case studies, articles, role plays and your research project based on auditing a locally-based family enterprise, this course will enable you to analyze and consider participating in a family business. Guest lectures from local family businesses will provide real-world application of the theories and concepts discussed in class. (Prerequisite: junior standing) Three credits.

MG 340 Critical Issues in Management

This course applies the knowledge students have acquired from previous management courses by examining integrative topics and issues in both domestic and global contexts. The focus of the course reflects traditional core concepts and their application to emerging critical issues in the field of business management. Case studies and experiential learning are used to enhance the classroom pedagogy. (Prerequisite: senior standing) Three credits.

MG 350 International Law

This course is a study of international laws, legal institutions, and the societal and cultural institutions that impact and regulate business activity throughout the world. The student is introduced to the risks of international business and how those risks differ from doing business domestically; the function and importance of public international law; the international commercial transaction and its potential problems; and the basic structure and principles of international trade law and negotiations for trade. Also discussed are the legal and ethical problems facing multinationals operating in a number of countries, including licensing and protection of international property rights, and a comparative analysis of host country employment laws. Special emphasis is placed on the developing countries and emerging markets, such as China, Russia, India, Africa, Latin America, the Middle East, and the Caribbean, with a comparative legal and cross-cultural perspective. This course meets the world diversity requirement. (Prerequisite: junior standing) Three credits.

MG 355 Organizational Culture

The notion of organizational culture is rooted in the assumption that organizations are greater than the sum of their material parts. Culture, therefore, is a means for close examination of the operating assumptions shaping organizational identity and behavior. Special emphasis is placed on organizational thinking, the presuppositions driving thinking, and the challenges that culture poses for substantive organizational change. (Prerequisite: junior standing) Three credits.

MG 360 Negotiation and Dispute Resolution

This course builds skills in negotiating and managing disputes and explores various theories concerning negotiation styles, strategy and tactics, alternative dispute resolution, and the major legal and ethical issues in the field. The course strengthens negotiation skills, introduces the many formal and informal processes available for dispute resolution, and develops managers' ability to resolve and prevent disputes. The heart of the course is a series of experiential exercises that create opportunities to practice and develop the principles learned in the course. (Prerequisite: junior standing) Three credits.

MG 365 Ethics and Technology in Business

This course examines the ways computer technologies may pose new kinds of ethical issues that call for fresh approaches to thinking ethically about business. The purpose of the course is to help students prepare to deal effectively with ethical issues of a technology they are likely to face in their careers. (Prerequisite: junior standing) Three credits.

MG 370 Managing Nonprofit Organizations

This course provides students with an understanding of the nonprofit sector and exposure to fundamentals in managing nonprofit organizations. It explores a broad range of topics including: the role of nonprofits in society, executive leadership and governance relationships in nonprofit organizations, the legal framework of nonprofits, human resource management of staff and volunteers, marketing and public relations, fundraising, budgeting and financial management, and strategic planning in the nonprofit sector. Special emphasis will be placed on leadership and the unique challenges that nonprofit leaders face in local, national, and global environments. (Prerequisite: junior standing) Three credits.

MG 380 Performance, Compensation, and Reward

This course covers theories and practices for effective compensation management. Topics include strategic perspectives of compensation systems, determining pay structure, job analysis, and job evaluation, design and administration, external pay competitiveness, designing pay levels, employee contributions and individual pay, subjective performance evaluation and merit pay, alternative reward systems, employee benefits, government's role and compliance, pay discrimination, budgets and pay administration, and union role in wages and salary administration. (Prerequisite: junior standing) Three credits.

MG 385 Managing People for Global Business

This course recognizes the complexities of managing human resources in the global business arena. Modern-day business is characterized by the relentless pace of globalization, through formation of international collaborations, mergers, joint ventures, and the opening up of new markets such as China, India, and Eastern Europe. There has been a dramatic increase in virtual work teams across several countries, globally outsourced work, and cultural diversity in the workplace as more people move across national borders to work. As a result, human resource management practices like recruitment, training, compensation, performance management, and employee relations are more complex. Additionally legal and regulatory requirements of foreign countries, cultural differences, expatriate management, and workforce mobility become important considerations. This course analyzes these complexities along with in-depth study of the people-related issues in different countries in Asia, Africa, Latin America, and Eastern Europe. This course meets the world diversity requirement. (Prerequisite: junior standing) Three credits.

MG 390 Cross-Cultural Management

Globalization, the internationalization of markets and corporations, has changed the way modern corporations do business. This course examines major themes and issues in the area of cross-cultural management. It focuses on three perspectives: the values, attitudes, and behaviors that are common to a cluster of countries, specific to one country, or specific to a major cultural subgroup or subgroups within one country. It explores what happens when cultures clash, and the need to understand different approaches to doing business in a diverse world. This course meets the world diversity requirement. (Prerequisite: junior standing) Three credits.

MG 391-394 Management Internship

Students may take two semesters of internship, approved by the department. (Prerequisites: students must have a GPA of 2.5 or higher, have junior standing, and complete the internship in their major area) One to eight credits.

MG 397-398 Seminar in Management

This special program involving independent study and research under faculty guidance is also intended for students accepted in an approved internship. Open only to seniors majoring in management and approved by the department chair. (Prerequisites: students must have an overall grade point average of 2.5 or greater) Three or six credits.

Marketing Major

Marketing majors examine the exchange processes by which consumers and organizations satisfy their needs and wants. In a sense, it is the most humanistic of the business majors; it requires students to understand consumer behavior, the motivation of sales personnel, the impact of advertising and communication on the potential consumer, the characteristics of consumers, the cultures involved in international marketing, market research techniques, and the role of marketing on the Internet. Marketing majors may further specialize by choosing one of two concentrations: relationship marketing or integrated marketing communications.

For an 18-credit major in marketing, students complete:

- MK 212 Consumer Behavior,
- MK 311 Marketing Research,
- MK 312 Global Marketing, and
- Three more marketing courses listed below. Two courses are required from a concentration area in order to receive the concentration notation.

Relationship Marketing Concentration

Complete at least two courses from the following:

- MK 221 Sales and Sales Management
- MK 321 Marketing Channels
- MK 322 Business to Business Marketing

Integrated Marketing Communications Concentration

Complete at least two courses from the following:

- MK 231 Advertising
 - MK 331 Media Strategy
 - MK 332 Public Relations
-

General Marketing Major

Complete three courses from the following:

- MK 221 Sales and Sales Management
- MK 231 Advertising
- MK 241 Digital Marketing
- MK 321 Marketing Channels
- MK 322 Business to Business Marketing
- MK 331 Media Strategy
- MK 332 Public Relations
- MK 341 Brand Management
- MK 342 Contemporary issues in Marketing

Marketing Minor

This minor provides students with a basic foundation in marketing by exposing them to the functions that constitute the marketing discipline, including market research techniques and consumer behavior.

For a 15-credit minor in marketing, students must complete:

- MK 101 Principles of Marketing
- MK 212 Consumer Behavior,
- MK 311 Marketing Research,* and

Two courses from the following:

- MK 221 Sales and Sales Management
- MK 231 Advertising
- MK 241 Digital Marketing
- MK 312 Global Marketing
- MK 321 Marketing Channel
- MK 322 Business to Business Marketing
- MK 331 Media Strategy
- MK 332 Public Relations
- MK 341 Brand Management
- MK 342 Contemporary Issues in Marketing

*Students should note that statistics and senior standing are prerequisites for MK 311.

Course Descriptions

MK 101 Principles of Marketing

This course introduces the fundamental concepts and theories that drive day-to-day marketing decisions. A thorough understanding of the marketplace (consumer or business-to-business) is at the heart of such decision making. In this course, students will learn to identify and satisfy customer's wants and needs. The core tools that enable managers to move from decision-making to action are addressed, namely: product development, pricing, channel management and structure, and promotions (including advertising and sales). Additional topics include global marketing, societal and marketing ethics, and digital marketing. Students are required to work in a team to construct a marketplace analysis for a chosen product/service. (Prerequisite: sophomore standing) Three credits.

MK 212 Consumer Behavior

This course provides students with an understanding of the behavior of consumers in the marketplace, using an interdisciplinary approach that employs concepts from such fields as economics, psychology, social psychology, sociology, and psychoanalysis. Topics include motivation, perception, attitudes, consumer search, and post-transactional behavior. (Prerequisites: MK 101, junior or senior standing) Three credits.

MK 221 Sales and Sales Management

This course is intended to give the student an understanding of the important role of the sales function in the overall marketing effort of the firm and in the firm's overall success. The course focuses on the sales process (prospecting, making presentations, handling objections and closing the sales), and the management of the sales force (recruiting, training, motivating, compensating, and supervising salespeople). Ethical issues in selling and new technologies that impact the sales effort are also covered. (Prerequisites: MK101, junior or senior standing) Three credits.

MK 231 Advertising

This course focuses on strategic management of a firm's integrated marketing communications, the most notable element of which is advertising. It emphasizes the importance of seamlessly and synergistically coordinating numerous promotional mix elements to create a uniquely memorable voice with which to communicate and engage the target audience in a lasting relationship with the firm's brand. Topics include advertising message strategy, creative strategy and execution, media strategy, and various relationship-building promotional tools. Also discussed are current events and ethical issues in advertising and promotion. Through activities and projects, students prepare for careers in advertising and related industries. (Prerequisites: MK 101, junior or senior standing) Three credits.

MK 241 Digital Marketing

From social networks to mobile applications, marketing in the digital age is markedly different than in the past. The course identifies marketing strategies that work in this new environment. Students will study how e-business and digital marketing continue to alter the business landscape and how certain theoretical frameworks can help to explain some of the current issues in the field. Specifically, students will examine how digital marketing has affected product, pricing, distribution, research, communication, and public policies. (Prerequisites: MK 101, junior or senior standing) Three credits.

MK 311 Marketing Research

This course gives students an appreciation of the role of marketing research in understanding customers to better address their needs and wants, as well as in reducing the risks associated with marketing decisions. Topics include problem formulation, research design, data collection instruments, sampling, data analysis, and communication of results. Students will get hands-on experience with different stages of the marketing research process. (Prerequisites: MK 101, a statistics course, and senior standing) Three credits.

MK 312 Global Marketing

This course instills in students an appreciation of the complexities encountered in marketing products and services in global markets. The course discusses differences that exist among consumers in different cultures and also provides students with an understanding of the role of external elements such as economic, political, legal, cultural, geographic, and social environments on the formulation of a firm's marketing strategy in foreign markets. (Prerequisites: MK 101, junior or senior standing) Three credits.

MK 321 Marketing Channels

This course provides a management focus and managerial framework to the discipline of distribution and channel management, emphasizing the design and management of marketing channels as a key strategic tool in satisfying the needs of the customers in the new millennium. The course integrates theory and practice, and applies them to the decision-making processes. The course also discusses the importance of the Internet as a marketing channel for the distribution of goods and services. (Prerequisites: MK 101, junior or senior standing) Three credits.

MK 322 Business to Business Marketing

This course examines the characteristics that differentiate industrial from consumer marketing. Topics include the nature of industrial demand; buyer characteristics; industrial market research; competitive bidding; selling of industrial products; sales and advertising strategies in marketing to business, government, and non-profit organizations; and practices and policies in the distribution of industrial goods. (Prerequisites: MK 101, junior or senior standing) Three credits.

MK 331 Media Strategy

This course examines the basic processes involved in strategic media planning including budgeting, selecting media forms and media vehicles, media timing, and media audience measurement. Students understand the role of traditional and non-traditional media, as well as new media such as the Internet, as channels for communicating promotional messages to consumers. The course also covers varied media allocation models. (Prerequisites: MK 101, junior or senior standing) Three credits.

MK 332 Public Relations

This course facilitates the fundamental understanding of audiences: receiving information from them, advertising management of their attitudes and responses, helping to set policies that demonstrate responsible attention to them, and constantly evaluating the effectiveness of all public relations programs. This inclusive role integrates all activities associated with ascertaining and influencing the opinions of a group of people. The course pays increasing attention to the use of electronic technology for messages from fax machines to e-mail to specialized networks in cyberspace. (Prerequisites: MK 101, junior or senior standing) Three credits.

MK 341 Brand Management

This course focuses on one element in the marketing mix: the product. It examines such questions as how should a firm effectively and efficiently manage its current product line and develop potential new products. Consideration is also given to strategic planning. (Prerequisites: MK 101, junior or senior standing) Three credits.

MK 342 Contemporary Issues in Marketing

This seminar on current marketing issues familiarizes students with the latest issues, events, and problems in marketing. The subject matter for the course draws upon recent events in marketing and course materials are derived from current periodicals and cases. (Prerequisites: MK 101, junior or senior standing) Three credits.

MK 391-394 Marketing Internship

Students may take two semesters of internship, approved by the department. (Prerequisites: MK 101, a GPA of 2.5 or better, junior standing, and completion of the internship in their major area) One to eight credits.

MK 397-398 Seminar in Marketing

This is a special program involving independent study and research under faculty guidance. Open only to seniors majoring in marketing and approved by the department chair. (Prerequisites: MK 101, an overall grade point average of 2.5 or better, senior standing) Three or six credits.

School of Engineering

A Message to Students

Welcome to the School of Engineering at Fairfield University. We are devoted to serving students as they successfully pursue undergraduate and graduate engineering degrees. The School provides opportunities for students to combine study with experience and professional practice through classroom instruction and industrial internships, offering the prospect for the best in engineering education.

The School of Engineering strives to maintain the highest level of institutional and instructional integrity, and remains committed to the Ignatian ideals of education, including intellectual rigor, service to others, and service to faith, with the promotion of justice for all as an absolute requirement. In pursuit of this mission, the School dedicates its resources to the nurturing of the intellectual capital and skills of its students across disciplines, and devotes the material means needed to support a robust working and learning environment. The School's graduates will have mastered theoretical and practical knowledge of engineering skills, and will have acquired additional competencies in communications, critical judgment, social responsibility, and a sense of economic and ethical values.

In the following pages of this catalog, you will find an explicit description of the educational objectives of each of the engineering programs offered in the School of Engineering. The curricula and degree requirements are linked to the objectives through student learning outcomes leading to national accreditation. The engineering curricula include a robust core of liberal arts courses – the hallmark of Fairfield's education – that aim to endow our engineering graduates with competencies that transform them into thinking citizens and lifelong learners, and prepare them to live an inspired life. Additionally, our ambition in the School of Engineering is to enable all our students to assume positions of technical leadership and professional responsibility, and to achieve full satisfaction in their jobs, or in graduate studies, upon graduation from Fairfield University. Furthermore, we train our graduates to become energetic participants in the social change that engineering and technology bring about in the course of time.

On behalf of the entire School of Engineering faculty, staff, and administration, welcome! We remain committed to excellence in engineering education.

Dr. Bruce W. Berdanier, PE, PS
Dean, School of Engineering

School of Engineering 2013-14

Dean: Bruce W. Berdanier, Ph.D.

Associate Dean: William Taylor, Ph.D.

Director of Laboratories: Paul Botosani, Ph.D.

Program Goals and Assessment

The School of Engineering aims to graduate students with leading-edge engineering skills and additional competencies in oral and written communications and critical thinking who possess a well-developed cultural orientation, an understanding of economic values, and a sense of ethical and social responsibility. The engineering curriculum addresses several knowledge areas: science and mathematics, computer science, major engineering field requirements, and engineering design, on one hand; a liberal studies core composed of courses in English, the humanities, social sciences, and the arts, on the other. Of particular note is the first-year course, Fundamentals of Engineering (EG 31), which is designed to introduce students to the engineering mindset - the tools and vision of engineering - and enable them to recognize the role of creativity and innovation in engineering, and to differentiate among engineering disciplines and their interactions. At the other end of the engineering experience, during the fourth year of studies, the team-driven senior project course offers a rigorous learning experience that completes the education of engineering students.

The mission of Fairfield's engineering program is to graduate liberally educated engineers equipped with knowledge and experiential skills so they may successfully enter the mainstream of industrial/manufacturing activity, education, or government service, or to continue with postgraduate studies. To that end, the School of Engineering:

- continually improves the quality and currency of its instructional programs and monitors their outcome,
- equips engineering laboratories with modern and versatile equipment and software applications,
- provides support services - advising, self-paced learning, tutorials - as needed by engineering students,
- maintains a close working relationship with industry to better know its needs and identify new opportunities to serve it,
- maintains a close relationship with practitioners of the engineering disciplines to gain input in program development and outcomes assessment,
- maintains small-size engineering classes so that rigorous instructor-to-student and student-to-student interactions are an integral part of the pedagogy.

The overriding themes of the educational process in the School of Engineering are:

- employing the inductive teaching methodology that is centered on active student learning, and
- assessing the outcome of student learning measured against the prescribed learning goals of the engineering programs and students' expectations. The Assessment and Continuous Quality Improvement Process (ACQIP) constitutes the operational paradigm in the School of Engineering and encompasses the educational philosophy that motivates innovation and the implementation of best educational practices.

Mentoring

Entering and continuing students meet with academic advisors to design jointly their schedule of courses. Students review their academic records before course registration each semester with assistance from advisors to keep abreast of their progress. The school provides counseling to students upon request so that their academic goals can be achieved efficiently and economically. Department chairs and program directors are actively involved in student advising and mentoring. Practicing engineers are often invited to participate in mentoring of interdisciplinary teams in the final senior design project.

Tutoring

Out-of-classroom assistance, provided by engineering professionals, is available in the school's tutorial center on a daily basis. A schedule of tutorial/mentoring services is distributed to all students in the beginning of each term.

Facilities

The offices of the School of Engineering, along with primary laboratory and computer facilities, are located in McAuliffe Hall. Science and additional classroom and computer application facilities are in the Bannow Science Center. A tutorial facility and a reading and reference lounge are also in McAuliffe Hall. The engineering reference and circulating collection is housed in the University's DiMenna-Nyselius Library. The School's laboratories are equipped with modern instrumentation and are subject to continuous innovation in order to provide an environment for experiential learning that is closely integrated with classroom learning. The School of Engineering complements its educational activities through its Web-based facility, which links laboratory instrumentation to the School's global network, and so enables demonstration of phenomena, simulation of processes, measurements, and data management in learning-supporting fashion. Finally, a small number of engineering courses are offered online as needed.

A video-teleconferencing system is among the teaching tools in the School of Engineering. The School's website is www.fairfield.edu/engineering. It offers information on the School, its programs, courses, and faculty.

Transfer Admission

General Transfer

Students with previous studies at other accredited institutions may apply for transfer to the School of Engineering. Credit for work completed elsewhere, with a grade of C or better, will be granted for equivalent Fairfield courses, in accordance with Fairfield University guidelines. The transfer student must provide an official transcript of all academic work and a catalog with course descriptions from each institution previously attended.

Transfer from Community Colleges

The School of Engineering has articulation agreements with the Connecticut College of Technology embracing the 12 community colleges in Connecticut. Under this agreement, the B.S. degree completion by graduates of community colleges with an engineering associate's degree is greatly facilitated at Fairfield University. Bridge courses to facilitate transfer, and some financial aid to transfers from community colleges, are also offered by the School of Engineering.

School Activities/Relationships with Area Industry

Engineering students at Fairfield University may join the Engineering Student Society, an umbrella organization that embraces student chapters of the American Society of Mechanical Engineers, Society of Manufacturing Engineers, the Institute of Electrical and Electronics Engineers, and the Society of Women Engineers. Students are encouraged to join ESS and profit from events sponsored by the chapters.

The School of Engineering maintains direct relations with area industries and manufacturers. These open lines of communication encourage the flow of information and support that keeps the engineering curriculum current and relevant to the environment in industry. These contacts are particularly useful to students in the senior design project course where they tackle real-life engineering problems encountered by practicing engineers and become involved in the mainstream of engineering activity.

University Honors Program

The School of Engineering participates in the University Honors Program, an interdisciplinary course of study (23 credits) open to invited freshmen and sophomores and devoted to intellectual history, interdisciplinary studies, and advanced work in the student's major field. A detailed description of the Program can be found in the Honors Program section on page 163.

Core Curriculum

The general education core curriculum provides a liberal education, drawing upon four major areas of knowledge. For each of these four areas of competency, engineering majors select courses as follows.

Area I: Mathematics and Natural Sciences

- Three semesters of Mathematics: MA 145, MA 146; MA 245. In addition, Computer Engineering majors also take MA 231, MA 321, and MA 351. Electrical Engineering majors also take MA 321 and MA 351. Mechanical Engineering majors also take MA 321. Software Engineering majors also take MA 321, MA 351, and a MA elective.
- Two semesters of General Physics: PS 15/15 Lab, PS 16/16 Lab. Automated Manufacturing Engineering, Electrical Engineering, and Mechanical Engineering majors also take CH 111/111 Lab. Computer Engineering majors also take a 4-credit science/lab elective. Software Engineering majors also must take a science elective.

Area II: History and Social Sciences

- Two semesters of History: HI 10 is required plus one 200-level History course. CL 115/116 (Greek and Roman Civilization) may be taken to fulfill this requirement.
- EC 11 Introduction to Microeconomics plus one Social Science elective.

Area III: Philosophy and Religious Studies

- Two semesters of Philosophy: PH 101 is required plus one 200-level Philosophy course.
- Two semesters of Religious Studies: RS 101 is required plus one 200-level Religious Studies course.
- AE 287 Engineering Ethics.

Area IV: English and Visual and Performing Arts

- EN 11 Texts and Contexts I.
- EN 12 Texts and Contexts II.
- One semester of English literature with a course number between EN 100-199. Writing courses (EN/W) do not fulfill the core literature requirement. Selected courses offering literature in translation may also fulfill this requirement - see listings under classical studies as well as modern languages and literature.
- One semester of visual and performing arts history - art history, music history, theatre history or new media film, television, and radio history,
- CD 211, Engineering Graphics I. Software Engineering majors take a second semester in Visual and Performing Arts.

Area V: Modern and Classical Languages

- Engineering majors are exempt from the Modern and Classical Languages requirement.

Diversity Requirements

All full-time and part-time students must complete one U.S. and one World Diversity course from a designated list of courses.

The SOE Advisory Board

The School of Engineering receives support and guidance in program development and other matters from its Advisory Board, a group of men and women in leading positions in industry and education.

Undergraduate Programs

The School of Engineering offers undergraduate programs leading to the Bachelor of Science in Engineering degree as well a certificate program in automated manufacturing.

Bachelor of Science in Engineering

Students in this program complete 132 to 134 credit hours. Students begin their studies with EG 31, Fundamentals of Engineering, and complete the degree requirements with the team-based Senior Design Project. EG 31 is designed to introduce first-year students to important design elements and the tools of engineering and develop their skills in analysis and synthesis, and in teamwork. It further provides the basis for students to select the engineering discipline most suitable to their skills and career objectives. The Senior Design Project caps students' engineering education by demanding the implementation of engineering design principles and associated skills in designing for functionality, reliability, and economy in real-world projects undertaken by multidisciplinary teams. All engineering programs include experiential learning in laboratory courses and culminate with the Senior Design Project. Students can avail themselves of opportunities for independent study and for internships in local industry. As a rule, the undergraduate curriculum, pursued on a full-time basis, is completed in:

- The traditional 4-year full-time program
- The 3/2 five-year program
- The part-time evening program

The Full-Time Traditional Program

This program leads to a B.S. in Engineering degree in one of the following:

- automated manufacturing engineering
- computer engineering
- electrical engineering
- mechanical engineering
- software engineering

As shown in later pages, this four-year course of study encompasses 132 to 134 credit hours, depending on the specific degree, in areas of engineering, science, mathematics, computer science, and the liberal arts. Freshmen are introduced into the spirit and vision of engineering through the Fundamentals of Engineering course. Seniors complete their degree requirements with the Senior Design Project.

The 3/2 Five-Year Program

The 3/2 engineering program is a five-year course of study. Students complete three years of studies at Fairfield in the areas of mathematics, the sciences, a portion of the engineering curriculum, humanities and social sciences, and two years of specialized engineering studies at one of four partner institutions: Columbia University, Rensselaer Polytechnic Institute, the University of Connecticut, and Stevens Institute of Technology. Students in this program earn two degrees, a B.A. from Fairfield University and a B.S. in engineering from one of the other four institutions. Through our partner schools, students have expanded options in choosing an engineering discipline: e.g., aeronautical, chemical, civil, environmental, biomedical, and nuclear engineering. With a 3.3 grade point average, students in the 3/2 program may transfer automatically to a university of their choice among the four partner institutions. Students who have completed the liberal arts core will be awarded the B.A. degree from Fairfield University at the end of their fourth year of studies, and will be graduated with their Fairfield class.

The Part-Time Evening Program

This program leads to either:

- a B.S. degree in electrical, mechanical, automated manufacturing, computer, or software engineering covering the same curriculum as the traditional 4-year full-time program,
- a certificate in automated manufacturing.

This program allows fully employed students to pursue engineering degrees on a part-time basis at a pace suited to their circumstances. In most instances, employers provide tuition reimbursement. The technical curriculum requirements for this program are the same as those for the full-time traditional program. However, occasionally work and/or life experience may count toward a reduced required curriculum upon permission of the dean. Advanced engineering classes, offered in the evening, are subscribed by both full-time and part-time students.

Major Areas of Study

Specific program objectives and curriculum requirements are provided in the sections that follow each engineering discipline. In general, the curricula consist of four areas:

- major field requirements
- major field electives
- general education core curriculum courses
- general electives

Concentration within Majors

Within each major field of study there are specialized options that can be taken to fulfill special career plans, under advisement from the department chair. Numerous elective courses afford opportunities for students to gain deeper knowledge and skills in areas of their interest. For example, microelectronics, power electronics, or wireless communications would be areas of concentration in electrical engineering; signal processing, digital design, or computer graphics in computer engineering; databases, data warehousing and data mining, or networks and network programming, in software engineering; strength of materials or machine design in mechanical engineering; programmable logic control systems in automated manufacturing engineering.

Minors in Other Fields of Study

Engineering students are eligible for a mathematic minor with the completion of five mathematics courses. It should be noted that all engineering programs require five, or more, mathematics courses. In addition, engineering majors can opt to fulfill the requirements for other minors. For example, an engineering student who wishes to gain further knowledge in economics could use the two social science electives and the two general electives in the liberal arts core, and with one summer course, he/she will complete the requirements for an economics minor. Similar arrangements can be made for a business minor or a physics minor.

Combined Bachelor's and Master's Degree

The Five-Year Dual Degree, B.S./M.S. Program in Software Engineering

This is a fast track program to a master's degree in software engineering. Students may request a change of status from the undergraduate to the undergraduate/graduate five-year combined plan of study at any point after the following conditions are met:

- Completed 98-102 credits towards the B.S. in Software Engineering, i.e., most likely at the end of their third year
- Completed all required junior-level math and software engineering courses specified in the undergraduate catalog
- Successfully completed six courses in software engineering or computer science with a GPA of 3.2, and are enrolled in at least one graduate course in software engineering
- Have an overall GPA of 3.0.

The Five-Year Dual Degree, B.S./M.S. Program in Electrical and Computer Engineering

Graduate engineering education is key to innovation and central to economic health. A graduate degree has become far more common in the workplace and a master's level engineering education gives a great return on your investment. This program reduces the time to a master's degree by at least one year and provides credentials that will serve the student throughout their adult professional career.

- Completed 60 credits towards the B.S. in Electrical or Computer Engineering
- Have an overall GPA of 3.0 or higher
- Have approval of their faculty advisor

Students will be awarded both the B.S. and master's degree simultaneously, when all the requirements of the combined degree curriculums have been satisfied.

Minor in Engineering

The School of Engineering offers a minor in engineering for non-engineering students. This is a 14-credit hour course of study for students who have completed two courses in calculus and two in physics with a grade of C or better. Students who choose the engineering minor will benefit intellectually from exploring the field of engineering and will strengthen their candidacy for professional studies such as medicine or law.

Graduate Programs

The School of Engineering offers four master of science in engineering degrees: M.S. in the management of technology, which is offered in conjunction with the MBA program in the Charles F. Dolan School of Business; M.S. in software engineering; M.S. in electrical and computer engineering; and M.S. in mechanical engineering. In addition, graduate engineers with special interests may enroll in certificate programs in Automated Manufacturing, Database Management, Information Security, Network Technology, and Web Application Development. For information about these programs, please see the School of Engineering graduate catalog, or visit the School's website at www.fairfield.edu/engineering.

Automated Manufacturing Engineering

Lecturers

Bauer
Botosani
Craciun
Lutian
Savage
Wojna

Bachelor of Science

Automated Manufacturing Engineering is a multidisciplinary field; it integrates knowledge from areas of science, mathematics, computers, mechanical engineering, electronics engineering, and automation. Following courses in fundamental engineering knowledge, students learn how to apply sound scientific principles to solve practical problems in industry in the area of automated manufacturing engineering. This program places an emphasis on the application of computer systems to modern manufacturing by means of such topics as robotics, computer-aided design (CAD), application of hydraulics and pneumatics in Automation (H&P), programmable logic controllers (PLC), computer-aided manufacturing (CAM), and computer integrated manufacturing (CIM), Logic in Automation, Automation Instrumentation, Automation Process, Network Automation Systems.

The **educational objectives of the Bachelor of Science degree program in automated manufacturing engineering** are as follows:

- Graduates will be able to apply their in-depth understanding of automated manufacturing engineering within the constraints of performance specification, budget, and scheduling.
- Graduates will develop their skills in engineering design, problem-solving and communication, and their aptitude for innovation and team-work, especially important for work on interdisciplinary projects.
- Graduates will become experts in their chosen fields, members of their professional societies, and broaden their professional knowledge with formal and/or informal continuing education.
- Graduates will practice the ethics of their profession, consistent with a sense of social responsibility and the promotion of a diverse and just society.

The Automated Manufacturing Engineering curriculum is constructed to include abundant experiential learning. This is accomplished through the integration of laboratory experiences within the framework of the theoretical courses in the basic curriculum, and by making use of well-equipped laboratories and computing facilities. Concentrations in automated manufacturing engineering and automation systems engineering are available in this program, with a focus on robotics and automation, feedback and product and process design, and automation process. A team-based design project at the senior level completes the technical education.

Bachelor of Science

The Computer Engineering Program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>. Computer engineering is an interdisciplinary degree program that enables its graduates to design and develop computer-based systems. In the computer engineering curriculum, theoretical work is integrated with experiential learning and design activity. Demand for engineers who can do both hardware and software is consistently strong and is expected to persist.

The Department of Computer Engineering supports the mission of the University through its undergraduate program by providing students with appropriate curricula and educational experiences. To accomplish the mission, the faculty, with advice from students, alumni and employers, determine a set of Program Educational Objectives. The Program Educational Objectives are broad statements that describe what alumni do within a few years following graduation. The Program Educational Objectives are:

- Alumni apply their in-depth understanding in areas of computer systems to solve computer systems related problems with real-world constraints (i.e., constraints on performance, budget, and scheduling, etc). They solve problems in a modern technological society in the professional environment of their employment, and/or they enter and succeed in a graduate program.
- Alumni practice engineering design, problem-solving skills and aptitude for innovation and communication skills as they function effectively, both individually and within multidisciplinary teams.
- Alumni continue to develop engineering design abilities, problem-solving skills, and aptitude for innovation and communication skills as they function effectively, both individually and within multidisciplinary teams.
- Alumni practice professional ethics with social responsibility in the framework of a global technical community. Alumni promote justice in all matters and perform service to the community.

Computer Engineering students obtain a background in the next generation of computer technologies. They learn computer design, computer science, electrical engineering, signal processing, biomedical engineering, physics, mathematics and the liberal arts.

Computer engineering students obtain depth in the domains of computer-based systems that impact areas of biomedical engineering, and mathematics. Graduates of the program have enough credit hours to get a minor in mathematics. Close interactions with industry results in employment of our graduates in all sectors of industry, government, and academe. They are active in the areas of hardware and software design and information technologies, and take the lead in the research and development of new computer systems and applications.

Computer Engineering Five-Year Dual-Degree BS/MS Program

Graduate engineering education is key to innovation and central to economic health. A graduate degree has become far more common in the work place and a master's level engineering education gives a great return on your investment. This program reduces the time to a master's degree by at least one year and provides credentials that will serve the student throughout their adult professional career.

Changing from undergraduate to graduate status:

Students may request a change of status from the undergraduate to the undergraduate/graduate combined plan of study at any point after the following conditions are met:

- Completed 60 credits toward the BS in computer engineering
- Have a GPA of 3.0 or higher
- Have approval of their faculty advisor

The five-year curriculum for combined BS/MS program follows:

Dual Degree Curriculum(156 credits)

Year 1	Fall Semester	Credits
EG 31	Fundamentals of Engineering	3
EN 11	Texts and Contexts I	3
MA 145	Calculus I: Engineering & Physics Majors	4
PH 101	Introduction to Philosophy	3
PS 15	General Physics I	3
PS 15L	General Physics I Lab	1
	Total	17

Year 1	Spring Semester	Credits
EN 12	Texts and Contexts II	3
MA 146	Calculus II: Engineering & Physics Majors	4
PS 16	General Physics II	3
PS 16L	General Physics II Lab	1
RS 101	Exploring Religion	3
SW 131	Fundamentals of Programming for Engineers	3
	Total	17

Year 2	Fall Semester	Credits
EE 213	Introduction to Electric Circuits	3
EE 213L	Electric Circuits Lab	1
EN 100-199	English Core Literature	3
MA 231	Discrete Mathematics	3
MA 245	Calculus III: Engineering & Physics Majors	4
SW 232	Advanced Programming and Data Structures	3
	Total	17

Year 2	Spring Semester	Credits
CR	Major Elective	3
CR 245	Digital Design I	3
CR 245L	Digital Design I Lab	1
EC 11	Introduction to Microeconomics	3
HI 10	Origins of the Modern World	3
MA 321	Ordinary Differential Equations	3
	Total	16

Year 3	Fall Semester	Credits
CR 246	Digital Electronics Design II	3
CR 331	Biomedical Signal Processing	3
EE 346	Embedded Microcontrollers	3
EE 346L	Microcontrollers Lab	1
GE	General Elective 1	3
MA 351	Probability Theory	3
	Total	16

Bachelor of Science

The electrical engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>. The electrical engineering courses have a strong design component. Students learn the theory in the classroom and put it into practice in the laboratory, resulting in an electrical engineering graduate who is ready to put these skills into practice in an industrial environment. The electrical engineering curriculum blends theoretical knowledge with hands-on experiential learning. An interdisciplinary team-based senior design project completes the technical education.

The educational objectives of the Bachelor of Science degree program in Electrical Engineering are as follows:

- BSEE program alumni apply their technical skills in the design and management of electrical systems. They balance technical requirements, quality control, scheduling and cost constraints in the design process.
- BSEE program alumni practice the profession of electrical engineering as an individual contributor to their discipline or as a contributing member of an interdisciplinary team in a competent and efficient manner.
- BSEE program alumni maintain membership in professional societies as part of their commitment to lifelong learning about their profession and its relationship to society.
- BSEE program alumni practice in an ethical and professional manner and are constantly aware of the impact of their efforts on social welfare, safety, and the environment. They promote justice and are of service to their community.

For the first year of study, all our engineering programs place major emphasis on the fundamentals of engineering and computer science, mathematics, and the basic sciences to provide the background for later engineering science and design courses. Following preparatory work, the fundamentals of electrical, computer, mechanical, and materials engineering concepts are developed. Advanced courses in electrical and computer engineering further develop knowledge in these engineering disciplines. The Electrical Engineering program places much emphasis on design assignments. Students may specialize in a specific area of interest to them, and in accord with their specific career objectives, by taking two elective courses that provide depth in that area.

Electrical Engineering Curriculum(134 credits)

Year 1	Fall Semester	Credits
EG 31	Fundamentals of Engineering	3
EN 11	Texts and Contexts I	3
MA 145	Calculus I: Engineering & Physics Majors	4

Bachelor of Science

The mechanical engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>. This engineering discipline has a very broad spectrum of applications in all aspects of modern technology. Students undertake studies in statics and dynamics, CAD, materials science, strength of materials, machine design, thermodynamics, fluid mechanics, heat transfer, and system dynamics. A team-based senior design project completes the technical education.

Mechanical Engineering Program Educational Objectives

The Mechanical Engineering Department is committed to graduating engineers who within a few years of their graduation are expected to:

- Apply engineering science to analyze and design energy and mechanical systems.
- Pursue engineering careers or advanced studies in mechanical engineering or related technical fields.
- Employ effective communication skills as a team member or team leader in an ethical and professional manner with a sense of social responsibility.
- Engage in lifelong learning by contributing to their chosen field, actively participating in professional societies and broadening their professional knowledge with formal and/or informal continuing education.

The mechanical engineering curriculum is constructed to include abundant experiential learning. This is accomplished through the integration of synchronized laboratory experiences within the framework of the theoretical courses in the basic curriculum, and by making use of well-equipped laboratories and computing facilities.

Mechanical Engineering Curriculum(134 credits)

Year 1	Fall Semester	Credits
EG 31	Fundamentals of Engineering	3
EN 11	Texts and Contexts I	3

ME 351	Gas Dynamics
ME 353	Computational Fluid Dynamics
ME 354	Heat and Mass Transfer
ME 362	Turbomachinery

Mechanical Systems:

CD 212	Engineering Graphics II
MC 300	Feedback and Control Systems
ME 320	Vibration Analysis
ME 321	Advanced Kinematics
ME 322	Advanced Dynamics
ME 319	Applications of Finite Element Analysis
ME 327	Applications of Fracture Mechanics in Engineering Design
ME 330	Mechanics of Composite Materials
ME 372	Applications of Theory of Elasticity
ME 382	Independent Study, Advanced Mechanical Project

Mechanical Engineering Note: In addition to the undergraduate courses advanced juniors and seniors are allowed to take appropriate graduate courses as electives with the permission of the department chair and the instructor.

Software Engineering

Associate Professors

Rusu

Yoo, *chair*

Lecturers

Corcoran

Galasso

Guelakis

LaMastra

The software engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>. The Software Engineering program offers both a Bachelor of Science in Engineering degree and a five-year Bachelor/Master dual-degree track. For the latter program see details later in this section.

Bachelor of Science

The mission of Fairfield University is to educate its students through a variety of scholarly and professional disciplines. It offers opportunities for individual and common reflection, and it provides training in such essential human skills as analysis, synthesis, and communication. Fairfield recognizes that learning is a life-long process and sees the education which it provides as the foundation upon which its students may continue to build within their chosen areas of scholarly study or professional development. The Software Engineering program supports the mission of the University by providing a curriculum focusing on the most advanced practices of software engineering through continued assessment by employers, alumni, faculty and students. The educational objectives of the program are to produce graduates within three years of graduation who will:

- be employed in fields of software engineering or related fields.
- continue the process of life-long learning through formal and informal education.
- communicate effectively.
- practice professional ethics with social responsibility.

The program emphasizes the complete lifecycle of the software development process. Students learn how to gather requirements, design, develop, test, deploy, and maintain software using rigorous software engineering practices. They are taught how to leverage technology to create flexible and scalable applications and to address the challenges that arise during the development process. Also, the program exposes students to a range of other disciplines, such as the physical sciences, social sciences, economics, and business so they gain an understanding of the real world scenarios that make up the software engineering environment. Theoretical courses are supported by rigorous laboratory tasks.

Software Engineering Curriculum (132 credits)

Year 1	Fall Semester	Credits
EG 31	Fundamentals of Engineering	3
EN 11	Texts and Contexts I	3
MA 145	Calculus I: Engineering & Physics Majors	4
PH 101	Introduction to Philosophy	3
PS 15	General Physics I	3

* Math Elective: MA 211, MA 235 or MA 321 recommended

General Electives (6 credits)

Software engineering program provides various elective courses and it is recommended for software engineering students to choose the general electives from the courses to bring the students depth in the computing and software engineering fields.

General electives and a major elective will be chosen under advisement of department chair or academic advisor.

Electives in Programming and Web Technology

SW 409	Advanced Programming in Java
SW 410	Enterprise Java
SW 506	Advanced Programming in C#
SW 512	Web Development II with ASP.NET
SW 516	High Performance Database Web Applications

Electives in Database Concepts

SW 505	Advanced Database Concepts
SW 508	Data Warehouse Systems
SW 518	Data Mining and Business Intelligence

Electives in Network Administration

SW 348	Server Management
SW 404	Network Concepts
SW 596	Network Routing and Switching

Electives in Information Security

SW 530	Introduction to Information Security
SW 531	Applications and Data Security
SW 599	Information Security Measures and Countermeasures

Electives in Electrical Engineering/Computer Hardware

CR 246	Digital Electronics Design II
EE 346	Embedded Microcontrollers
EE 346L	Microcontroller Laboratory

Electives in Computer Graphics and Image Processing

CR 310	Voice and Signal Processing
CR 311	Image Processing
MA 211	Applied Matrix Theory
CR 325	Computer Graphics

Software Engineering Five-Year Dual-Degree BS/MS Program

A five-year program is offered in Software Engineering at Fairfield's School of Engineering, leading to a combined Bachelor of Science and Master of Science degrees. This program embraces the educational objectives of the traditional undergraduate program, as well as those of the graduate program. It emphasizes experiential learning in terms of industrial internships following the sophomore year, and a final capstone project that guides students through a process of design and innovation at the level of a professional engineer. Graduates of the program master the knowledge and tools they need to create the next generation of software solutions to ever more complex technological and societal problems.

Changing from Undergraduate to Graduate Status

Students may request a change of status from the undergraduate to the undergraduate/graduate combined plan of study at any point after the following conditions are met:

- Completed 98-102 credits towards the B.S. in Software Engineering.
- Completed all required Junior-level (300-level) math and Software Engineering courses specified in the undergraduate catalog.
- Have successfully completed 6 courses in Software Engineering or Computer Science with a GPA of 3.2, and are enrolled in at least one graduate course in Software Engineering at the time the change is requested.
- Have an overall GPA of 3.0 or higher.

Students are also required to submit two letters of recommendation, one of which must be from their faculty advisor.

The five-year curriculum for combined BS/MS program is as follows:

Dual Degree Curriculum(156 credits)

Year 1	Fall Semester	Credits
EG 31	Fundamentals of Engineering	3
EN 11	Texts and Contexts I	3
MA 145	Calculus I: Engineering & Physics Majors	4
PH 101	Introduction to Philosophy	3
PS 15	General Physics I	3
PS 15L	General Physics I Lab	1
	Total	17

Year 1	Spring Semester	Credits
EN 12	Texts and Contexts II	3
MA 146	Calculus II: Engineering & Physics Majors	4
PS 16	General Physics II	3
PS 16L	General Physics II Lab	1
RS 101	Exploring Religion	3
SW 131	Fundamentals of Programming for Engineers	3
	Total	17
Year 2	Fall Semester	Credits
HI 10	Origins of the Modern World	3
MA 231	Discrete Mathematics	3
MA 245	Calculus III: Engineering & Physics Majors	4
SW 232	Advanced Programming and Data Structures	3

* Math Elective: MA 211, MA 235 or MA 321 recommended

Major Electives

For Electives see list under the 4-year B.S. program in Software Engineering.

3/2 Engineering Program; BA/BS Degrees

Engineering students in this program complete a three-year course of study at Fairfield University encompassing the areas of science, mathematics, the liberal arts, and several engineering courses, before transferring to a school of their choice among Columbia University, Rensselaer Polytechnic Institute, the University of Connecticut, and the Stevens Institute of Technology, where they complete their engineering studies in two additional years. This five-year course of study leads to a B.A. from Fairfield University and a B.S. in Engineering from the school of the student's choice.

At the end of the 4th year, and assuming full completion of Fairfield's liberal arts core, the student will receive the B.A. degree from Fairfield University at the same time with the rest of his/her Fairfield class.

Transfer to one of the four schools requires a 3.3 GPA at the end of the third year at Fairfield.

3/2 Engineering Program

PH	Philosophy Elective	3
	Total	18

Special Requirements:

- MA 332, Partial Differential Equations is strongly recommended for students in the 3/2 Program.
- Students who intend to major in electrical or computer engineering must take a C++ or Java programming course; CR 245 Digital Electronics Design I and CR 245L Digital Design I Laboratory.
- Students who intend to major in chemical engineering must take CH 112 and CH 112L General Chemistry II and General Chemistry Lab II.
- Columbia University requires one semester of economics.
- The University of Connecticut has a foreign language requirement that may be fulfilled at Fairfield or on the UConn campus. The Fairfield general electives could be utilized for this purpose.
- Students who intend to transfer to Columbia, RPI, or Stevens must also take thermodynamics (ME 241) and, if possible, PS 285 Modern Physics.

Minor in Engineering

The Engineering Minor Program of Studies

The minor in engineering assists non-engineering students in acquiring technical skills through lectures and laboratory experiences, but primarily improves their understanding of engineering and its methods, purposes, ethics, and ramifications. Students in the minor ultimately are able to work more effectively in their primary field, having acquired additional skills and an enhanced perspective of the capabilities and limitations of a discipline that is a powerful force in shaping our lives. Specifically, the minor seeks to integrate science fundamentals and mathematical methods with engineering analysis and design.

A minimum of 14 credit hours is required for the engineering minor, in addition to mathematics and science prerequisites. Four engineering courses of three credits each, and two laboratory courses of one credit each, are required for the completion of the minor.

Students in the minor may choose a sequence of courses in tune with their area of interest, and with advice from the coordinator of the minor. For example:

- Students who lean toward electrical systems may choose the sequence EE 213, CR 245, EE 231, CR 246.
- Interests in computer engineering are satisfied with the sequence CR 245, CR 246, CR 3XX and EE 3XX course.
- In the area of software engineering, a recommended sequence consists of SW 201, SW 202, MF 250, CR 320.
- In the area of mechanical systems the sequence ME 201, ME 241, ME 308, MF 207 is recommended.
- In the area of Nanoscience and Nanotechnology, the recommended sequence is EG 210, EG 212, EE 315, EE 316.
- In the area of biomedical engineering the course sequence is CR 331, CR 332, CR 333 and an approved elective.

Laboratory courses are chosen to supplement the sequence of lecture courses. From outside the sciences and mathematics, students may opt for EG 31, SW 201, ME 201, MF 207.

Minor in Engineering

The recommended four-course sequence for the minor may be chosen from among those listed below, with indicated prerequisites:

EG 31	Fundamentals of Engineering	3	
CD 211	Engineering Graphics I	3	
EE 213	Introduction to Electric Circuits	3	(Requires PS 16 or equivalent)
EE 213L	Electric Circuits Lab	1	(EE 213 is co-requisite)
EE 221	Frequency Domain Circuit Analysis	3	(Requires EE 213)
EE 231	Introduction to Electronic Circuits and Devices	3	(Requires EE 213)
EE 231L	Electronic Circuits Lab	1	(EE 231 is co-requisite)
CR 245	Digital Design I	3	(Requires PS 16 or equivalent)
CR 245L	Digital Design I Lab	1	(CR 245 is co-requisite)
CR 246	Digital Electronics Design II	3	(Requires CR 245, CR 245L)
CR 320	Computer Networks	3	(By permission*)
ME 201	Engineering Statics	3	(Requires PS 15 or equivalent)
ME 203	Kinematics and Dynamics	3	(Requires ME 201)
ME 206L	Mechanics Laboratory	1	(Requires ME 201)
ME 241	Principles of Thermodynamics	3	(Requires MA 321)
ME 308	Strength of Materials	3	(Requires ME 201)
MF 207	Material Science	3	(Requires CH 111)
MF 250	Programmable Logic Control Systems	3	(Requires EE 213)
MF 250L	Programmable Logic Control Sys. Lab	1	(MF 250 is co-requisite)
SW 201	Software Engineering Methods	3	(Requires SW 131)
SW 202	Software Design Methods	3	(Requires SW 131)
EG 210	Nanoscience and Nanotechnology I	3	
EG 212	Nanoscience and Nanotechnology II	3	(Requires EG 210, with EG 210L as co-requisite)
EE 315	Nanoelectronics	3	(Requires EG 212, EE 213)
CR 333	Biomedical Visualization	3	(Requires SW 131 or equivalent)
CR 331	Biomedical Signal Processing	3	(Requires SW 131 and MA 146 or MA 122)
CR 332	Biomedical Imaging	3	(Requires CR 331)

* Assuming satisfactory prerequisite

Engineering Course Descriptions

EG 31 Fundamentals of Engineering

This course provides core engineering knowledge and competencies in a highly interactive class format. Topics include professional skills such as technical writing and presentation, guidelines for professional engineering practice, and career preparation. Introduction to the fields, roles, and industries of engineering also serves as a basis for selection of engineering major field. Hands-on team projects are core learning experiences. They form a structured introduction to the implementation of principles of design and engineering methodologies, system engineering management, and presentation skills. Guest presenters and field trips augment this course, which is taught by interdisciplinary faculty teams. (Co-requisites: PS 15) Three credits

EG 145 Mathematical Analysis

In this course students will learn mathematical and numerical methods such as differentiation, integration, and Fourier analysis and how to apply these methods to solve scientific problems. Additionally, the course will cover statistics including data analysis, trend fitting, data correlation, and interpolation. Students will learn to use MATLAB as a tool but also become proficient in programming. (Prerequisites: MA 145 or equivalent; Co-requisite: MA 146) Three credits.

EG 210 Introduction to Nanoscience and Nanotechnology I

This course will provide a highly interdisciplinary introduction to the science of nanoscale materials (nanoscience). The course will survey the new field of nanoscience/nanotechnology, aiming to motivate interest in and heighten awareness of this field. Its many potential applications in medicine, biology, electronics and optoelectronics, engineering, materials science and chemistry, open a broad new horizon to an exciting technology to serve societal needs. Topics will include historical background, characterization techniques, physics and chemistry of nanoscale materials, fabrication techniques, characterization methods, nanoscale applications (nanotechnology), and ethical/societal considerations. Intended for all students. Three credits.

EG 212 Introduction to Nanoscience and Nanotechnology II

This course will continue a highly interdisciplinary, mathematically-based overview, providing a solid foundation in nanoscale materials, techniques, and applications (nanoscience). The course will continue to broadly survey the new field of nanoscience/nanotechnology. Its many potential applications in medicine, biology, electronics and optoelectronics, engineering, materials science, and chemistry, open a broad new horizon to an exciting technology to serve societal needs. Topics of discussion, such as quantum dots, nanowires, nanotubes, MEMS and nanobiology, will be reinforced through hands on laboratory experience with nanomaterial synthesis, device fabrication techniques, and characterization methods. Intended for students interested in the minor in nanotechnology. (Prerequisite: EG 210) Lecture with Lab course. Four credits.

EG 325 Engineering Applications of Numerical Methods

Topics include root-finding, interpolation, linear algebraic systems, numerical integration, numerical solution of ordinary and partial differential equations, modeling, simulation, initial boundary value problems, and two point boundary value problems. (Prerequisite: SW 131 or equivalent demonstrated programming language skills) Three credits.

EG 390-391 Senior Design I & II

In this capstone course, students work in teams on advanced projects that emphasize engineering design with due attention to engineering standards and constraints. The overarching scope of this course is to transform engineering students to practicing engineers. Under the guidance of a faculty/mentor, each team conducts literature searches, and its members develop skills in information analysis and synthesis; they model and test prototypes of their devices, and make frequent oral presentations of their work to faculty and peers, and submit timely progress reports. In the process, they receive instruction in effective communication and presentation practices, and develop an appreciation of teamwork and collective success. This two-semester course begins in the fall of the academic year and concludes at the end of the spring term with a final team oral presentation and a final written report, and a working prototype of the team's project. Prerequisite: completion of all non-elective program courses, and completion of other program requirements to enable graduation within the year of completion of EG 390-391. Total of six credits.

CD 211 Engineering Graphics I

This is a basic course in engineering graphics principles and is taught simultaneously with SolidWorks, a 3D modeling design application. Using traditional and computer design, the course stresses geometric constructions, orthographic projection, dimensioning, sectional views, 3D part modeling, assembly modeling, drafting and engineering drawings, animation and geometric tolerancing. The course stresses aesthetics and technical sketching. You will gain a working knowledge of SolidWorks in engineering design. Three credits

CD 212 Engineering Graphics II

This course introduces CATIA Version 5; the leading CAD/CAM/CAE application used by automotive, aerospace, shipbuilding, and consumer goods industries. It provides mechanical, electrical, automotive, aerospace, and marine engineers and architects with the design tools to take products from concept to completion - in one seamless application. This course covers basic solid modeling concepts of individual sheetmetal and machined parts from detailed drawings. "Complex Shape Modeling" using "wireframe concepts" and "surface-based" modeling is covered. Building of assemblies of components and control of their positioning and orientation, as well as motion simulation is covered. Fully detailed production drawings of components and assemblies are also covered. Three credits.

CR 245 Digital Design I

An introduction to computer hardware design. Topics include: digital design principles, Boolean algebra, combinational logic design, sequential logic design, registers, counters, memory, multiplexers, finite state machines, radix conversion, and programmable logic devices. Students learn to write, implement, and simulate elementary digital design. Three credits.

CR 245L Digital Design I Laboratory

This lab course covers the practical aspects of digital logic design. Students design and implement logic circuits using simulators and hardware and techniques taught in CR 245. Students use state machines to implement open-ended design problems. (Co-requisite: CR 245) One credit.

CR 246 Digital Electronics Design II

This course examines computer architecture implemented using a hardware design language and programmable logic devices. Students design, implement, and program small reduced-instruction-set-computer machines. Students understand central processing unit architecture and the VHDL language and implement and program a central processing unit using VHDL. Student knowledge of the basics culminates in being able to design and implement programmable finite-state machines. (Prerequisite: CR 245) Three credits.

CR 310 Voice and Signal Processing

This course has both signal processing and object-oriented design content. It emphasizes hands-on multi-media programming, offering an overview of digital signal processing and its applications. Students build software systems that make use of sampling theory, Fourier transforms, and processing in both space and time. Students implement algorithms for elementary sound synthesis (Prerequisites: SW 232, and MA 145 or MA 172) Three credits.

CR 311 Image Processing

This course builds on CR 310, extending the multi-media program content into the area of image processing. Students build image-processing applications, implementing algorithms in areas that include color space conversion, low-level pattern recognition, and theory of two-dimensional in space and time. Students write high-performance image-processing programs with applications in the area of streaming multi-media content. (Prerequisite: CR 310 or permission of the instructor) Three credits.

CR 320 Computer Networks

This course covers principles of networking and network programming. Topics include OSI layers, elementary queuing theory, protocol analysis, multi-threading, command-line interpreters, and monitors. Students write a distributed computing system and check their performance predictions with experiments. (Prerequisite: SW 131 and MA 351 or permission of the instructor) Three credits.

CR 325 Computer Graphics

This course supports the visualization and computer systems domain, offering an introductory treatment to two-dimensional and three-dimensional computer graphics concepts. Students write computer games and employ their knowledge to imbue them with realism. High performance rendering uses the latest in cutting edge hardware-accelerated graphics processors. (Prerequisite: SW 131 or permission of the instructor) Three credits.

CR 331 Biomedical Signal Processing

This course presents an overview of different methods used in biomedical signal processing. Signals with bioelectric origin are given special attention and their properties and clinical significance are reviewed. In many cases, the methods used for processing and analyzing biomedical signals are derived from a modeling perspective based on statistical signal descriptions. The purpose of the signal processing methods ranges from reduction of noise and artifacts to extraction of clinically significant features. The course gives each participant the opportunity to study the performance of a method on real, biomedical signals. (Prerequisites: SW 131 or CS 142 or SW 408 and MA 146 or MA 122; or permission of the instructor). Three credits.

CR 332 Biomedical Imaging

The course presents the fundamentals and applications of common medical imaging techniques, for example: x-ray imaging and computed tomography, nuclear medicine, magnetic resonance imaging, ultrasound, and optical imaging. In addition, as a basis for biomedical imaging, introductory material on general image formation concepts and characteristics are presented, including human visual perception and psychophysics. (Prerequisite CR 331) Three credits.

CR 333 Biomedical Visualization

This course is an introduction to 3-D biomedical visualization. Various technologies are introduced, including UltraSound, MRI, CAT scans, PET scans, etc. Students will learn about spatial data structures, computational geometry and solid modeling with applications in 3-D molecular and anatomical modeling. (Prerequisite: SW 131 or equivalent) Three credit.

CR 346 Computer System Architecture

This course introduces the machine language and various components of a computer hardware in modern computer systems. The course focuses on CPU, memory, bus, cache, I/O module, internal data representation, and instruction set design. It also covers pipelining, superscalar architecture, reduced instruction set computers, parallel architectures, and interconnection networks. (Prerequisite: CR 245) Three credits.

CR 382 Independent Studies in Computer Engineering

This course includes supervised reading and research. Available only by pre-arrangement with the instructor. Three credits.

EE 213 Introduction to Electric Circuits

This course introduces engineering students to the analysis of linear electric circuits. The course covers the basic laws of circuit behavior and analysis techniques, including descriptions of circuit elements and electronic variables, and considers circuit theorems and principles for insightful analysis of electrical circuits. The course introduces basic concepts and analysis of networks. (Prerequisites: MA 146, PS 16, PS 16L) Three credits.

EE 213L Electric Circuits Lab

Students use common electrical laboratory instruments (oscilloscopes, meters, and signal generators) and elemental circuit components to construct and analyze basic electrical circuits. They study the application of circuit theorems and circuit elements (RL and RC); conduct experiments with transient, steady state, and frequency response; and use software applications to simulate and analyze circuit performance. (Co-requisite: EE 213) One credit.

EE 221 Frequency Domain Circuit Analysis

Students perform frequency domain analysis of passive and active circuits, study transient and AC circuit analysis manually and with computer-aided applications, and examine the transient response of first and second order circuits. The course introduces pole and zero concepts and applies them to circuit analysis, and introduces computer methods of circuit analysis and design. (Prerequisites: MA 245, EE 213) Three credits.

EE 231 Introduction to Electronics Circuits and Devices

This first course in electronics teaches basic principles and technologies to understand, analyze, and design electronic circuits. The course reviews the properties of semiconductor materials used in the fabrication of diodes, bipolar junction transistors, and field effect transistors. Students analyze amplifier biasing techniques and develop circuit models of semi-conductor devices that are used to analyze and design electronic circuits. Computer simulations of circuits are used to illustrate the fundamental principles. (Prerequisite: EE 213) Three credits.

EE 231L Electronics Circuits Lab

Students build and test circuits using diodes, bipolar junction transistors, and MOSFETs. They use the principles developed in EE 231 to analyze, build, and test amplifier and oscillator circuits. (Prerequisite: EE 231L; Co-requisite: EE 231) One credit.

EE 301 Signals and Systems I

This course studies and classifies continuous and discrete signals and systems. It presents time domain and discrete analysis of signals using the Fourier series, Laplace transforms, Fourier transforms, z-transforms, and fast Fourier transforms (e.g., differential equations, convolution, concept and meaning of impulse response); and examines frequency domain analysis, the Fourier series, and the Fourier transform as an alternative to time domain analysis. Students gain further insights into signal and system properties through the Laplace transform methods and the concept of the transfer function. (Prerequisite: EE 221; Co-requisite: MA 321) Three credits.

EE 315 Nanoelectronics I

Building on the two introductory courses in nanotechnology, this course is the first of two that describe how nanotechnology can be integrated into the electronics industry. The unique electrical, mechanical, and optical properties of structures in the nanometer range and how they may be applied to electronics products are discussed. Principles of electronic materials, semiconductor devices, and microfabrication techniques will be extended to the nanoscale. Students will increase their knowledge of electronic structure, quantum mechanics, and the behavior of optoelectronic and low-dimensional systems. Students make extensive use of the available literature to seek out potential applications of nanotechnology. Intended for students interested in the minor in nanotechnology - Nanoelectronics track. Also open to interested graduate students in ECE. Lecture course. (Prerequisite: EG 212 or permission of the instructor). Three credits.

EE 316 Nanoelectronics II

This second course in Nanoelectronics emphasizes present and potential applications of nanotechnology in the various fields of next-generation electronics. The course will discuss topics relevant to electromagnetism at the nanoscale, MEMS/NEMS, nanosensors, nano-optics, molecular electronics, and nanoelectronic interfaces with biology. Student teams will survey the available literature and companies involved in designing and manufacturing devices with Nanoelectronics as a core to select a product for analysis in terms of technical and economic advantages, and present their findings. Teams of students also conceptualize a potential product, and perform the same analysis. Intended for students interested in the minor in nanotechnology - Nanoelectronics track. Also open to interested graduate students in ECE. Prerequisite: ECE 315. Three credits.

EE 321 Electromagnetic Fields

This course uses vector calculus to investigate electric and magnetic fields. Topics include techniques for the computation of fields for given charge distributions; Coulomb's and Gauss' law and applications, and the significance of Poisson's and Laplace equations; solution methods; moving charges and corresponding electric and magnetic forces; electric and magnetic fields in matter; methods of solving boundary value problems; Maxwell's equations in integral and differential form; and electromagnetic radiation and wave propagation. (Prerequisites: EE 301 or CR 310, MA245 and MA 321) Four credits.

EE 331 Analog Electronics Design

This advanced course in electronics examines high frequency response of bipolar junction transistor and field-effect transistor amplifiers using hybrid two-port active device models. Students consider the effect of feedback and frequency compensation techniques on the amplifier response and study a variety of analog circuits with respect to their analysis and applications, including active filters, oscillators, waveform generation and shaping, voltage regulator, and communication circuits. The course introduces basic power electronics device components. (Prerequisites: EE 221, EE 231) Three credits.

EE 331L Analog Electronics Lab

This advanced lab provides insight into the functions of various application-specific electronic circuits. Experiments characterize functioning of various analog systems, such as oscillators, active filters, waveform generation and shaping circuits, and voltage regulator circuits. (Prerequisite: EE 231L; Co-requisite: EE 331) One credit.

EE 335 Microelectronics

This course covers three methods of fabricating high-density interconnection structures for manufacturing microelectronic assemblies: thick films, thin films, and printed circuit boards. The thick and thin film technologies use substrates of metalized ceramic to make the interconnections between components and are capable of fabricating integrated resistors with high precision and stability. The printed circuit board technology uses organic materials with copper laminates to etch the interconnection patterns. The individual layers are laminated to produce the multilayer structure, but do not include integrated resistors. Each of the technologies is examined to determine the electrical and physical properties of the structures. Such parameters as distributed capacitance and how they affect circuit performance are discussed. In the laboratory accompanying the course, students have the opportunity to fabricate thick and thin film circuits and to examine the structure of printed circuit boards. (Prerequisite: EE 331) Three credits.

EE 346 Embedded Microcontrollers

This course covers the architecture of microcontrollers, including how they are constructed internally and how they interface with external circuitry. Applications for microcontrollers in both complex and simple equipment are discussed. Students learn how to apply and how to select a microcontroller for a given application. An accompanying laboratory course covers the programming of microprocessors to do a specific task. This course covers the programming and application of the PIC microcontroller. Students are able to develop programming skills using assembly language and software tools such as MPLAB IDE and MultiSim MCU. These tools are used to develop software code for practical applications such as motor speed control and voltage regulation for power supplies. (Prerequisite: CR 245 or equivalent) Three credits.

EE 346L Microcontroller Laboratory

This laboratory covers the basic operation and applications of a microcontroller. Students learn to program a microcontroller to control applications, such as motor speed, by the use of an emulator connected to a PC. They design a circuit using a microcontroller for a specific application and write a program to control the circuit. On completion of the program, they use the emulator to program an actual microcontroller for use in their circuits. (Co-requisite: EE 346) One credit.

EE 350 Analog Communication Systems

The course focuses on analog communication systems and the effects of noise on those systems, developing modulation and demodulation techniques (amplitude, frequency, and phase modulation and pulse code). It discusses dealing with non-linear system elements and presents a mathematical treatment of the effects of various noise sources on these systems. Historical design studies and topics in communication applications permit students to apply these concepts to meet system requirements. The course clarifies important concepts through simulation of modulation techniques on multimedia computing systems. (Prerequisite: EE 301) Three credits.

EE 352 Digital Communications

This course is designed to explore current digital communications features, including network communications between computers. It includes discrete time signals and systems, Z-transforms, discrete Fourier transforms, fast Fourier transforms, digital filter design, and random signals. Fundamentals of sampling principles and channel coding are utilized to develop common baseband and digital modulation techniques (ASK, FSK, PSK, PCM, and delta modulation). Transmission over bandwidth constrained channels, and signal detection and extraction. Multiplexing and multiple access networks are also analyzed. The lecture material is illustrated with practical examples. (Prerequisite: EE 301 or equivalent.) Three credits.

EE 360 Power Electronics

This course covers the design and operation of power electronics circuits, such as power supplies and motor controls. Using electronic circuit models for transistors and diodes developed in earlier courses, students analyze and design power circuits. Particular attention is paid to power dissipation and packaging. The accompanying laboratory course, ECE 360L, provides practical experience in conjunction with the lecture material. (Prerequisites: EE 301, EE 221) Three credits.

EE 360L Power Electronics Laboratory

This lab applies the theory developed in EE 360 to actual devices. Students fabricate, test, and optimize their designs. They gain practical experience in packaging and cooling power circuits. One credit.

EE 361 Green Power Generation

This course compares various methods of green power generation including solar power, wind power, water power, and several others. This course covers how power is generated from these sources, the startup costs, the efficiency, and the practicality. These methods are compared to the present most common method of using oil and gas to heat water into steam to turn turbines. The student does not necessarily need a background in engineering and any necessary background material will be covered to the understanding of all. Three credits.

EE 375 Microwave Structures

This course considers the generation and transmission of electromagnetic waves. Maxwell's equations and the generation of radiation by currents and charges in free space are covered, followed by the propagation of waves in various media. Structures used in microwave propagation, including transmission lines, waveguides, resonators, amplifiers, and antennas are also considered. (Prerequisite: EE 321) Three credits.

EE 382 Advanced Electrical Project

During this design course emphasizing individual creativity, students (working with a faculty mentor) develop project objectives and performance specifications. At review meetings, students present progress on their project, including analytic and experimental results to date. A final report and presentation demonstrates the accomplishments and significant conclusions. Faculty involvement creates a realistic engineering development environment. Students may take this course as independent study once the prerequisites have been met. (Prerequisites: departmental approval of project proposal following completion of non-elective electrical engineering courses and at least one major elective) Two credits.

EE 383 Wireless Systems I

This course covers several aspects of wireless communication, including antenna design, FCC regulations, and multi-channel transmission protocols. Modern design approaches, such as Bluetooth, are discussed, along with wide-area network systems (WANS) and local broadband networks. (Prerequisites: EE 321, EE 213) Three credits.

EE 385 Power Generation and Distribution

This course considers the generation and distribution of electrical power to large areas. Three-phase networks are described in detail, including both generators and loads. Methods of modeling distribution systems by per-unit parameters are covered, along with power factor correction methods. Fault detection and lightning protection methods are also described. Some economic aspects of power generation and distribution are presented. (Prerequisite: EE 221) Three credits.

EE 386 Fault Analysis in Power Systems

This course covers three types of faults in electrical power grids: open lines, lines shorted to ground, and lines shorted to each other. Methods of locating faults are covered along with an analysis of the effects of such faults. Methods of protection and fault isolation are also covered. (Prerequisite: EE 385) Three credits.

ME 201 Engineering Statics

This introduction to rigid body mechanics using vector representation covers free body diagrams and static equilibrium in two- and three-dimensional space; solves problems in trusses, frames, and simple mechanisms; and develops methods in problem-solving techniques using computer-based approaches. Students perform lab experiments to support lecture theories and prepare professional-level reports. (Prerequisites: PS 15, PS 15L, MA 146) Three credits.

ME 203 Kinematics and Dynamics

This course presents kinematics principles applied to particles and rigid body elements. Topics include analysis of forces and motion using Newton's second and third laws of motion; theory of kinetics of particles and rigid body elements under rectilinear and curvilinear motion, vector methods; principles of work, energy, and power; and momentum and impact. (Prerequisites: ME 201, MA 245) Three credits.

ME 206L Mechanics Laboratory

Students do mechanics experiments for two- and three-dimensional structures under static loading conditions. Concepts include vectors, equilibrium, moments, truss analysis, forces, and center of gravity of objects. This course includes topics in engineering materials, such as hardness, toughness, microscopic analysis, machinability and thermal properties. The course introduces strain gages, instrumentation and statistical data analysis. Students perform experiments and prepare laboratory reports. (Co-requisites: ME 201) One credit.

ME 241 Principles of Thermodynamics

This course on macroscopic thermodynamics with applications covers conservation of energy for open and closed systems; equations of state and pure substances; first and second law of thermodynamics, including the concepts of internal energy; and enthalpy and entropy as applied to aero-thermal components. Tables of thermodynamic properties, ideal gases and elements of cycle analysis, and applications of thermodynamic cycles, such as Carnot and Rankine, are discussed. (Prerequisites: PS 15, PS 15L; MA 245) Three credits.

ME 307L Dynamics Systems Lab

Students perform experiments covering the concepts of kinematics, dynamics, and mechanisms. Concepts included are: Newton's Laws, momentum, mechanical energy, impact, and friction. The course includes concepts in the area of strength of materials, such as: stress, strain, loading, modulus of elasticity, and fatigue. It also covers analysis of beams, photoelastic studies, and statistical data analysis. Students complete written lab reports. (Co-requisites: ME 203, ME 308) One credit.

ME 308 Strength of Materials

This course examines concepts of two-dimensional stress and strain, factors of safety, thermal strain, static indeterminacy, stress concentration, bending including normal and shearing stresses, torsion, direct shear, principal stresses; Mohr's Circle; thin-walled pressure vessels; beam theory including shear and bending moment diagrams; deflection; elastic curves; indeterminate beams; energy methods; the use of superposition; and impact effects and column theory. Lab experiments reinforce these aspects of theory. This course includes a design project. (Prerequisites: ME 201, MA 245; co-requisite: ME 203) Three credits.

ME 311 Machine Design

This course applies the fundamentals of mechanical engineering design to analyze, design, and/or select components typically used in the design of complete mechanical systems. The course covers the design process and analysis of stress and deflection; material properties and loading (steady state and variable) as they relate to failure prevention; and the procedures for design and analysis of common machine elements such as columns, cylinders, fasteners and springs. In team reverse-engineering projects, students apply the course topics to real hardware. The course emphasizes computer techniques and responsible design (safety factors and ethics). (Prerequisite: ME 308) Three credits.

ME 318 Finite Element Analysis

An introduction to concepts in finite element analysis; this course covers one- and two- dimensional element formulation and structural analysis. This finite element analysis is extended to three dimensional problems in dynamic systems and control, design and manufacturing, mechanics and materials, and fluids and thermal systems. This course will provide an overview of the complimentary topic of computational fluid dynamics (CFD). Students solve problems both manually and with the use of modern computer finite element software, ANSYS and FLUENT. (Prerequisites: MA 321, CD 211, and ME 308) Three credits.

ME 319 Applications of Finite Element Analysis

This course examines applications of finite element analysis in modern engineering including structural analysis, fluid flow and heat transfer. It is an introduction to the concepts of dynamics as applied to structure. Finite element formulations covering 1-, 2- and 3-dimensional elements as well as energy methods are developed. Students develop techniques for application of finite element method in structural design, dynamic system response, fluid and thermal analyses. Application of methodology to fluid flow is presented. Students solve example and design problems manually and using modern finite element analysis software, ANSYS and FLUENT. (Prerequisites: ME 318) Three credits.

ME 320 Vibration Analysis

This course covers fundamental laws of mechanics, free and forced vibration of discrete single and multi-degree-of-freedom systems, periodic and harmonic motion, viscous damping, and measures of energy dissipation. Modal analysis for linear systems, computational methods in vibration analysis, natural frequencies and mode shapes, analytical dynamics and Lagrange's equation, longitudinal, torsional, and flexural vibration of continuous elastic systems (strings, rods, beams) are discussed. Students learn energy methods, approximate methods for distributed parameter systems, and dynamic response by direct numerical integration methods. (Prerequisites: ME 203, MC 290, or equivalent) Three credits.

ME 321 Advanced Kinematics

Topics in advanced kinematics include introduction to basic concepts and definitions related to kinematics, commonly used links and joints, kinematic analysis of mechanisms, introduction to robotic mechanisms, homogeneous transformations, Euler angles, Denavit-Hartenberg representation of forward kinematics of robots, inverse kinematics solution of robots, degeneracy and dexterity, and differential motion and velocity relations. Industrial application of kinematics will also be covered and the course will include a laboratory or project component. (Prerequisite: ME 203) Three credits.

ME 322 Advanced Dynamics

The topics in the area of dynamics include degrees of freedom, generalized coordinates, constraints, the principle of virtual work and D'Alembert's principle. Energy and momentum, frames of reference, orbital motion, Lagrange's equation, moments and products of inertia, and dynamics of rigid bodies are also discussed, as well as variational principles: stationary value of a function, Hamilton's principle, principle of least action, Hamilton's equation. (Prerequisites: ME 203 or equivalent) Three credits.

ME 327 Applications of Fracture Mechanics in Engineering Design

This course covers fracture mechanics concepts for design, materials selection, and failure analysis. The fundamental principles of fracture parameters and criteria, stress field at the tip of a crack, fracture toughness, thickness effect, plastic zone concept, and crack growth under cyclic loading and aggressive environment will be presented. Emphasis will be placed on the practical applications of fracture mechanics by incorporation of design problems and laboratory demonstrations in the course. (Prerequisite: ME 308, or equivalent) Three credits.

ME 330 Mechanics of Composite Materials

While the use of man-made composites have existed for centuries for practical applications, engineered composite materials are finding increasing use in many high technology applications such as aerospace, electronics, sporting goods, and structural components for high stability systems. This course is designed to provide a comprehensive understanding of classification, processing, properties, selection and failure of polymer, metal and ceramic based composite materials. (Prerequisite: MF 207) Three credits.

ME 342 Applications of Thermodynamics

This course applies concepts learned in ME 241. Topics include mixtures of ideal gases and vapors; psychrometry; combustion analysis of common power generating, refrigeration, and air conditioning cycles; figures of merit including thermal efficiency; continuity equation, basic energy relations for turbomachinery; fundamentals of compressor and turbine design; and application and synthesis of design using thermodynamic principles. This course contains a lab segment. (Prerequisites: ME 241) Three credits.

ME 346 Energy Conversion

This course covers the major topics in energy conversion, including fuels used in energy conversion; solar energy; gas turbine engines and applications; internal combustion engines; heat pumps; classic and novel power and refrigeration cycles; system analysis; system economics; and environmental considerations. The course includes computer simulation of power plant performance to optimize energy conversion efficiency. A research report on one of the emerging sources of energy is an essential part of this course. (Prerequisite: ME 349) Three credits

ME 347 Fluid Mechanics

Topics in this course include incompressible fluids at rest and in motion; Bernoulli's theorem and the principle of similarity flow through orifices, nozzles, and pipes; flow through open channels; energy relationships as applied to pipe lines, pumps, and turbines; acceleration of fluid masses; losses in fluid flow systems; fluid dynamics; the momentum theorem in turbomachinery; and introduction to compressible fluid flow. This course emphasizes design solutions using computer analysis and synthesis. The course includes a design project of a system that applies the principles of fluid flow. (Prerequisite: ME 241) Three credits.

ME 348L Thermal and Fluids Lab

This laboratory learning experience provides the opportunity to explore various components, such as the compressor, condenser, and evaporator, in a series of experiments using refrigeration equipment. Students investigate lift and drag in a wind tunnel, pressure losses in duct flow, and the Bernoulli principle. Also, students determine the efficiency of a centrifugal pump, plot PV diagrams for the Otto Cycle, and study a Pelton Wheel Hydraulic Turbine. The course emphasizes statistical analysis, test planning, data evaluation, and report writing. (Co-requisites: ME 342, ME 347) One credit.

ME 349 Heat Transfer

This course covers one- and two-dimensional heat conduction, including solutions for finned surfaces and solutions for transient problems; convection heat transfer in laminar and turbulent flows; fundamental radiation concepts; laws of thermal radiation; radiation exchange geometrical factors and network methods; heat exchangers and electrical analogies. The course emphasizes design solutions using computer analysis and synthesis. In the lab, students investigate heat transfer in plane surfaces, enhanced heat transfer in extended surfaces, and heat exchanger effectiveness. This course includes a practical design project of a system that applies the principles of heat transfer. (Prerequisites: ME 342, ME 347) Three credits.

ME 350L Energy Transfer Lab

A laboratory experience for engineering students utilizing hands-on experiments to explore energy transfer methods related to transmitted forces in vibrating systems, as well as thermal transfer gradients in mechanical, electrical, and electronic systems. Students use simulation and modeling software for many experiments, including conduction and convection heat transfer processes. The course emphasizes statistical analysis, instrumentation, and report writing. (Co-requisites: MC 290, ME 349) One credit.

ME 351 Gas Dynamics

This course reviews fundamental concepts and equations of fluid dynamics. One dimensional compressible flow solutions with and without friction are covered. Equations of conservation of mass, rate of strain tensor, Navier-Stokes equations, mechanical and thermal energy equations with derivations are discussed. Equations are presented in Cartesian and orthogonal curvilinear coordinate systems. Boundary layer theory is covered. Students will discuss laminar and turbulent viscous flow solutions, including boundary layers, Couette, & Poiseuille flows. In addition to analytical closed form solutions, an introduction to computational methods is presented. (Prerequisite ME 347 or equivalent) Three credits

ME 353 Computational Fluid Dynamics

Introduction to computational methods used for the solution of advanced fluid dynamics problems. Emphasis on concepts in finite difference methods as applied to various ordinary and partial differential model equations in fluid mechanics, fundamentals of spatial discretization, numerical integration, and numerical linear algebra. A focus on the engineering and scientific computing environment. Other topics may include waves, advanced numerical methods (like spectral, finite element, finite volume), non-uniform grids, turbulence modeling, and methods complex boundary conditions. (Prerequisite ME 347 or equivalent) Three credits

ME 354 Heat and Mass Transfer

This course covers the concepts of conduction, convection, and radiation heat transfer as well as mass transfer. Boiling and condensation; design and performance of selected thermal systems (including heat exchangers); and laminar and turbulent flows as related to forced and free convection are all studied. Mathematical modeling of engineering systems using modern analytical and computational solution methods are also covered. This course carries a design/research project. (Prerequisite: ME 349 or equivalent) Three credits.

ME 362 Turbomachinery

The theoretical basis and the fundamentals of modern turbomachinery for aerospace (helicopter, aircraft) and power generation (marine, industrial) applications are studied. Brayton engine cycle analysis and performance improvement are reviewed. Applications of the principles of fluid mechanics and thermodynamics to the design of turbines and compressors are examined, as well as component analysis and velocity diagram for axial compressors, centrifugal compressors and axial turbines. Discussion of combustion and environmental emissions. This course carries a design/research project (Prerequisite: ME 347 or equivalent) Three credits.

ME 382 Independent Study, Advanced Mechanical Project

During this design course emphasizing individual creativity, students (working with a faculty mentor) develop project objectives and performance specifications. At review meetings, students present progress on the project including analytic and experimental results to date. A final report and presentation demonstrates the accomplishments and significant conclusions. Faculty involvement creates a realistic engineering development environment. Students may take this course as independent study once the prerequisites have been met. (Prerequisites: departmental approval of project proposal following completion of non-elective mechanical engineering courses and at least one major elective) One to three credits.

MF 207 Materials Science

This course provides an overview of the various classes of materials including metals, ceramics, and polymers and the role of these materials in service and design applications. Subjects include atomic structure and bonding, the periodic table, crystal structure, microstructure, defects, diffusion, binary phase diagrams, phase transformations, and corrosion. The effects of processing, microstructure, and composition on mechanical, electrical, and thermal properties are discussed. Lab sessions examine mechanical testing methods and microstructure analyses. Students learn sample preparation and metallographic techniques. (Co-requisites: CH 111, CH 111L) Three credits.

MF 230 Computer-Aided Manufacturing (CAM) I

An in-depth introduction to the science, math, and engineering of computer-aided manufacturing methods, the course provides a comprehensive view of manufacturing planning, design, automation, flexible automation, and computers in manufacturing, using a strong science-based and analytical approach. CNC and tooling for CNC application are discussed. The course consists of lectures, group discussions, case studies, a term project, computer simulation, and laboratory. (Prerequisites: CD 211, MA 146) Three credits.

MF 240 Computer-Aided Manufacturing (CAM) II

The course balances CAD and CAM with up-to-date information on rapid prototyping, solid modeling systems, and Web-related issues. Complicated mathematical terminology is kept to a minimum; instead, the concepts are explained in as intuitive a way as possible. Students are required to have a background only in programming, calculus, and matrix and vector algebra. The course also covers components of CAD/CAM/CAE Systems and CAD/CAM postprocessor development manufacturing systems. The course consists of lectures, group discussions, case studies, a term project, computer simulation, and laboratory. (Prerequisite: MF 230) Three credits.

MF 250 Programmable Logic Control (PLC) Systems

This course introduces the design and implementation of programmable logic controllers for use in industry in the areas of automation, manufacturing, and other related applications. It takes an overall look at Programmable Logic Controllers while concentrating on relay ladder logic techniques and how the PLC is connected to external components in an operating control system. State-of-the-art software used includes: MultiSim, LabView, Cosivis, Veep, and RS Logix 500. The course also covers input/output ports, continuous process control, timing and counting functions, chaining sequences, and digital gate logic. The course consists of lectures, group discussions, case studies, a term project, computer simulation, and laboratory. (Prerequisite: PS 16) Three credits.

MF 250L Programmable Logic Control (PLC) Systems Lab

This course is designed to teach the students to work with the PLC. The student learns to analyze open- and closed-loop control tasks from the field of activities, and to develop structured and PLC-adequate programs in either function plan, ladder diagram, instruction list, sequential function chart, or structured text. Allen Bradley, Mitsubishi, GE, Fanuc, and Siemens PLC are used. The students must create the PLC programs from description of desired operations. State-of-the-art software used includes: MultiSim, LabView, Cosivis, Veep, and RS Logix 500, Fluid Sym P, and others. (Co-requisite: MF 250) One credit.

MF 261 Automation Logic Design

This course introduces binary numbers, Boolean algebra and Karnaugh maps; how these support the design of digital logic and how this platform transfers to ladder logic; both of which are used in the design and control of automation systems. Use of classic methods of using binary logic levels to control a process is applied and the development of Boolean algebra for the solution of automation problems (Prerequisite: PS 16) Three credits.

MF 315 Computer Integrated Manufacturing (CIM)

This course shows how CIM fits into the current manufacturing systems and how the technology is used to solve real-world industrial problems. It integrates basic product design techniques and manufacturing fundamentals and principles, along with a look at the changing operations and information systems that support CIM in the enterprise. Topics include concepts of CIM and the manufacturing enterprise; the design elements and production engineering; managing the enterprise resources; and enabling processes and systems for modern manufacturing. The course consists of lectures, group discussions, case studies, a term project, computer simulation, and laboratory. (Prerequisite: MF 240) Three credits.

MF 316 Automation Instrumentation and Measurement

This course is designed to provide theoretical and practical knowledge in the selection, application, installation and use of instrumentation in automation processes. Students learn about the theory and application of measuring properties such as pressure, temperature, flow, level, vibration, load and strain. Also, topics such as calibration, sensors, gauges and computer applications are included. Introduction to LabView and other data acquisition software is part of the curriculum. (Prerequisite: PS 16) Three credits.

MF 317 Automation Process Design

This course will discuss the criteria for automating manual operations. The intent is to call attention to some of the important considerations which must be given to processes employed using automation principles. Areas of concentration are Transportation, Utilities, Defense, Facility Operations and Home Automation. Information Technology (IT) encompasses a broad spectrum of computer technologies used to create, store, retrieve and disseminate information. It is in the area of IT where most of the more flexible and non-industry-specific advances are now being made. Manufacturing applications also will be discussed, including Flexible Manufacturing Systems (FMS), Computer Integrated Manufacturing (CIM), Computer-Aided Manufacturing (CAM), Numerically Controlled (NC) equipment. The course will distinguish which processes adapt the specific automation category. Programmable automation and artificial intelligence will be discussed. (Prerequisite: MF 240) Three credits.

MF 318 Applications of Hydraulics and Pneumatics in Automation

This course introduces the integration of fluids and mechanics theory to real-world applications. The primary topics include piping, hydraulic fluids, pumps, diverting valves, actuators, ISO symbols and system design with safety as a priority. Upon completion, students will have an understanding of how fluid power is applied in automation and developed to satisfy industrial requirements. The course consists of lectures, group discussions, case studies, a term project, computer simulation and laboratory. (Prerequisite: PS 16) Three credits.

MF 319 Network Systems Automation

This course will discuss the networks used in automation, principles of operation, and use of them. Students will be exposed to the five level of automation from device level to enterprise level; fieldbus and profibus; networks detecting machinery faults; networked smart sensors systems; and the peer-to-peer intelligent transducer networks. The course will also introduce students to local area networks and data communication. The course consists of lectures, group discussions, case studies, a term project, computer simulation, and laboratory. (Prerequisite: MF 240) Three credits.

MF 350 Advanced Programmable Logic Control (PLC) Systems

This course will give students advanced concepts in programmable logic controllers and their applications and interfacing to industrial controls in the areas of automation, manufacturing, and others. Topics include bit operations, data manipulation, industrial PLC network utilizing Ethernet, Control-Net, and DeviceNet. Data sharing and distributed PLC programming techniques along with fundamentals of touch panel programming and operation are studied. State of the art software used: MultiSim, LabView, Cosivis, Veep, Automation Studio, and RS Logix 500. It will include also: input/output ports, intermittent and continuous process control, arithmetic and comparison instruction, function block diagrams, indirect and indexed addressing, and sequential function charts. The course will consist of: lectures, group discussions, case studies, a term project, and computer simulation. (Prerequisite: PS 16) Three credits.

MF 350L Advanced Programmable Logic Control (PLC) Systems Lab

This course will introduce the advance design and implementation of programmable logic controllers for use in industry in the areas of automation, manufacturing, and others. It will take an overall look at Programmable Logic Controllers while concentrating on data handling, function block diagram, and industrial networks and distributive control. State-of-the-art software used: MultiSim, LabView, Cosivis, Veep, Automation Studio, and RS Logix 500. It will also include: input/output ports, intermittent and continuous process control, arithmetic and comparison instruction, function block diagrams, indirect and indexed addressing, and sequential function charts. (Co-requisite: MF 350) One credit.

MF 351 Manufacturing Systems I

This introduction to general and special modern manufacturing technologies includes sheet metal fabrication and process, gear manufacturing, hard mold, powder metallurgy, plastic and rubber processes, primary metalworking processes, metal shearing and forming, welding, different machine processes, and material surface treatment. Additional topics include manufacturing techniques such as measurement and inspection for quality control process, material properties analysis in common materials and composites, and material selections and applications in modern manufacturing environments. (Prerequisite: MF 207) Three credits.

MF 352 Manufacturing Systems II

This course considers several advanced manufacturing technologies. Topics include laser cutting and welding; water-jet cutting and cleaning; plasma cutting and welding; analysis and application of numerical control, computerized numerical control, and programmable logic control systems in manufacturing facilities and modern production systems; robotics; automated assembly lines; and material handling systems. Advanced topics include management of modern automated production lines, design of material handling systems, and selection of control systems in manufacturing applications. (Prerequisite: MF 351) Three credits.

MF 353 Manufacturing Processes and Materials

This course will provide basic knowledge of conventional and non-conventional manufacturing processes, as well as the design, engineering, and economic properties of conventional and non-conventional materials. Topics to be considered are the influence of processing on materials and properties, and the role of process in design of products. Included are processes such as casting, forging, sheet metal fabrication, plastic forming, injection of plastic and metals, power metal joining, machining. (Prerequisite: MF 207) Three credits.

MF 354 Product and Process Design for Manufacturing

Students learn the principles of product design for optimizing product manufacture and assembly - an essential part of the concurrent engineering process. The course examines materials and processes used in part manufacture and designing for manual and automated assembly processes. A course project applies these principles. (Prerequisite: MF 240) Three credits.

MF 355 Product Planning Control and Forecasting

This course will consider modern operations of both manufacturing and service sectors of the world economy. Topics to be included are: concepts of planning and control of production systems; design of control systems and operation planning; demand forecasting; inventory control; operations planning; scheduling; dynamic control; production planning of product mixes; economical lot sizes and vendor supplies. Where possible computer models will be used. (Prerequisite: MF 354) Three credits.

MF 361 Automation and Robotics I

This course introduces the basic elements of automation, industrial robotics, automated work cells, common information model systems, and the automated factory. Topics include kinematics, dynamics, the classification of robots, automation sensors, work cells, import systems and programming, robot/system integration, economic justification, and applications. (Prerequisite: ME 203) Three credits.

MF 362 Automation and Robotics II

This course introduces components of the automated factory. Topics include design of parts and processes for automation, hard and flexible automation, blocks of automation, automatic production and assembly, numeric controllers, computer-aided design/computer-aided manufacturing, industrial logic control systems, programmable logic controllers, and computer applications in automation. (Prerequisite: ME 203) Three credits.

MC 290 Engineering Systems Dynamics

The student will become familiar with the analysis of the dynamic response of structures, structural components to transient loads, and foundation excitation. Course includes single-degree-of-freedom and multiple-degree-of-freedom systems, frequency response concepts, and introduction to modal analysis. Basic concepts of vibration control and control theory will be introduced. (Prerequisites: MA 321, ME 318) Three credits.

MC 300 Feedback and Control Systems

This course emphasizes analysis and synthesis of closed loop control systems using both classical and state-space approaches with an emphasis on electro-mechanical systems. The mathematical requirements include the Laplace transform methods of solving differential equations, matrix algebra, and basic complex variables. The discussion of classical control system design includes the modeling of dynamic systems, block diagram representation, time and frequency domain methods, transient and steady state response, stability criteria, controller action [Proportional (P), proportional and integral (PI), Proportional, integral, and derivative (PID) and pseudo-derivatives feedback], root locus methods, the methods of Nyquist and Bode, and dynamics compensation techniques. The discussion of state-space methods includes formulation and solution (analytical and computer-based) of the state equations and pole-placement design. The course integrates the use of computer-aided analysis and design tools (MATLAB) so as to ensure relevance to the design of real world controlled electro-mechanical systems using case studies and applications to electrical and mechanical systems. Includes lab (hardware-based) exercises. (Prerequisites: MA 321, MC 290 or EE 301) Three credits.

MC 396 Mechatronics Application

This course covers development of mechatronics theory and applications to systems dependent upon the integration of mechanical, electrical and computer engineering. Students assemble hardware components to create a product design that fulfills a specified task in a mechatronics system. Students develop design skills in mechanisms, electrical devices, and software to create, test, and verify system function. Sessions include lab projects. Three credits.

SW 131 Fundamentals of Programming for Engineers

This course introduces the object-oriented programming. Topics include data types, control structures, arrays, I/O, file handling, GUI, and the OOP concept of encapsulation, inheritance, polymorphism, packages, interfaces, and inner classes. Three credits.

SW 201 Software Engineering Methods

This course explores the requirements gathering, system analysis, and software design methods of software application following the software processes required for the production of high quality software. Techniques for creating documentation and using software development tools will be presented. Students will gain experience in software project management, requirements, analysis, and safety issues in software development; interpersonal skills for management and team membership; and the software engineering discernment of systems architecture. (Prerequisite: SW 232) Three credits.

SW 202 Software Design Methods

This course is the continuation of SW 201 with in-depth projects and further discussions of design and implementation topics. Through the use of case studies and project work that has the student gradually building a large design specification, students will achieve an understanding of how complex applications are designed and built. (Prerequisite: SW 201) Three credits.

SW 204 Software Project Management

This course explores and practices fundamental project management skills and life cycles required for both the successful management and development of software. Quality management principles of Personal Software Process (PSP) and Team Software Process (TSP) are introduced and practiced. Students will learn how to develop a project plan, scope a project, identify project activities, create work breakdown structures, estimate and schedule resources, construct and analyze project network diagrams, finalize project schedule and cost based on resource activity, recruit team members, organize and manage a project team, monitor and control progress, understand critical path project management, and have knowledge of both agile and traditional project management methods. (Prerequisite SW 232) Three credits.

SW 205 Software Testing and Maintenance

This course will cover in-depth methods for software testing, reliability and maintenance of software. Students will learn the principles of software testing and how to apply software testing techniques to the development of quality software and how to deploy software systems, maintain, enhance and reuse software systems. (Prerequisite SW 201) Three credits.

SW 232 Advanced Programming and Data Structures

This course covers Abstract Data Structures such as Queues, Stacks, Heaps, Linked Lists, Trees, Graphs, Hash tables and sortings. Students apply data structure concept in advanced programming. (Prerequisite SW 131) Three credits.

SW 304 Web Development

This course introduces the student to developing applications for use on the World Wide Web. Students learn basic n-tier concepts for designing distributed applications and gain hands on experience through the construction of Web-based applications. The course covers concepts that allow communication over the Web. This includes designing and authoring Web pages, markup languages, the client-side document object model, usability, search engine optimization, and client-side dynamic Web pages. (Prerequisite: SW 131) Three credits.

SW 327 Operating Systems and Programming

This course introduces the internal operation of modern operating systems and students learn how to program on non-Windows OS platform. The topics cover a brief history of operating systems, the major components of modern operating systems, and the object-oriented methodology on UNIX-like platform. Various UNIX tools will be used in the course and participants study examples using object-oriented programs as well as large system integration by object-oriented methodology. (Prerequisite: SW 232) Three credits.

SW 348 Server Management

Server Management is a course designed to provide the student with the tools necessary to manage Windows Server. The topics include user management, installation and configuration of web server, mail server, FTP server, LDAP and backup, and other routine system and network administration. Three credits.

SW 355 Database Management Systems

This course examines data formats, organizations, representations and structures; design and analysis of searching, sorting, and other algorithms; data management systems; relational database model; domains and relational integrity; structured query language; database design - logical and physical; entity-relationship diagrams; normalization; transaction processing; and database administration. (Prerequisite: SW 232) Three credits.

SW 382 Special Topics in Software Engineering

This course provides an in-depth study of selected topics in software engineering of particular interest to the students and instructor. The course is counted as a major elective/specialization course. The topics and prerequisites will be announced when this course is offered. Three credits.

SW 383 Independent Study

This course is an individualized study under the supervision of the faculty member. The course emphasizes individual creativity. Students work with a faculty mentor in studying and investigating topics of current interest in software engineering. Students may earn from one to three credits for an independent study course. (Prerequisite: permission of the instructor) One to three credits.

SW 399 Introduction to Algorithms

This course introduces various algorithms and analyzes the complexity and efficiency of the algorithms. Topics cover classic and heuristic algorithms, algorithm analysis, searching, sorting and parsing techniques, and theoretical foundation. Student gains experience of analyzing algorithm efficiency and performance through problem solving and programming projects. (Prerequisite SW 232) Three credits.

SW 409 Advanced Programming in Java

This course covers advanced topic of Java programming. Topic covers multithreading, networking, nested references, design patterns, JDBC, persistence, I/O and advanced GUI such as swing. Data structure concepts such as linked list, tree and basic searching and sorting algorithms will be covered. Lab included. (Prerequisite: SW 232 or permission of the instructor) Three credits.

SW 410 Enterprise Java

This course explores advanced Java technologies. Coverage includes state-of-the-art explorations into server-side technologies such as JDBC, Hibernate, Enterprise JavaBeans (EJB), Java Message Service (JMS), XML, etc., as time permits. Lab included. (Prerequisite: SW 409 or permission of the instructor). Three credits.

SW 505 Advanced Database Concepts

This course covers topics in database implementation designed to provide software engineers with a wide variety of server-side problem solving techniques. Topics include cursors, query and index optimization, advanced SQL programming, distributed databases, object-oriented databases, clustering, partitioning, and working with XML and other unstructured data. While Microsoft SQL Server is primarily used for demonstration, the topics covered are applicable to any database platform, and the different approaches of the major database vendors are frequently contrasted. Format consists of lecture and lab. (Prerequisites: SW 232 plus SW 355 or instructor approval) Three credits.

SW 506 Advanced Programming in C#

This course teaches application developers the more advanced elements of programming with Visual C# for the .NET framework. Students learn object-oriented programming using classes, objects and inheritance, and cover topics such as multithreading, design patterns, and advanced GUI. Data structure concepts such as linked list, tree and basic searching and sorting algorithms will be covered. At the completion of this course, students will be able to produce complete Windows and console based applications with Visual C#. Lab included. (Prerequisite: SW 232) Three credits.

SW 508 Data Warehouse Systems

This course examines the tools, techniques, and processes used in the design and development of data warehouses. Students will examine how to successfully gather, structure, analyze, and understand the data to be stored in the data warehouse, discuss techniques for modeling the data in the data warehouse, discuss the ETL process and describe techniques for presenting and analyzing the data in the warehouse. Capacity planning and performance monitoring will be discussed. Microsoft Analysis Services and Sybase ASIQ will be examined as approaches for implementing a data warehouse. (Prerequisite: SW 355) Three credits.

SW 512 Web Development II with ASP.NET

This course teaches site developers how to create a robust, scalable and data-driven ASP.NET website. Students learn how to create ASP.NET applications using a text editor and the command-line tools, as well as using Visual Studio. Topics include the .NET framework, web forms, validation controls, database connectivity, web services, component development, user controls, custom server controls, and best practices. At the end of the course, students are able to describe the issues involved in creating an enterprise website, creating and publishing a website, creating interactive content for a website, adding server scripting to a web page using ASP.NET, implementing security in a website, and reading and writing information to a database from ASP.NET. (Prerequisites: SW 406 plus SW 506 or permission of instructor) Three credits.

SW 516 High Performance Database Web Application

This course is an introduction to the PHP programming language. Topics include installation and configuration with the Apache http server, variables and data types, language syntax, control structures, functions, strategies and tools for handling input and generating output, error handling, sending e-mail, manipulating dates and times, string manipulation and regular expressions, and SQL and MySQL database access. The course also covers advanced topics such as MVC model-based web application development using framework and packages from the PHP Extension and Application Repository (PEAR). At the conclusion of the course, students are able to design and implement scalable data-driven web applications. (Prerequisites: SW 304 and SW 232) Three credits.

SW 518 Data Mining and Business Intelligence

This course examines business intelligence concepts, methods and processes used to improve data-centric business decisions and support solutions with a particular focus on data mining techniques. Students will first examine the principles and practices of gathering and retrieving large volumes of data for analysis and synthesis. Next, analytical techniques for extracting information from large data sets will be examined. In particular, the data mining techniques of classification, estimation, prediction, and clustering will be examined. During the course, knowledge management will also be reviewed, and how organizations manage and use the knowledge that they acquire. Data presentation will be discussed. Three credits.

SW 530 Introduction to Information Security

This course gives students a fundamental understanding of current social engineering methods in the Information Security arena. Deception and human behavior is exploited to gain valuable information, which is very relevant to today's growing security concerns. This course builds upon the weaknesses in the human factor. Areas of discussion will be methods, current trends, and most of all countermeasures. The pedigree will be lecture and discussions assignment, which involves analyzing current workplaces and social gatherings coupled with scenarios of exploitation. Three credits.

SW 531 Application and Data Security

This course is structured around enterprise and web applications and the data security associated with these applications. It encompasses the encryption schemes of transmission to execution of code and complete flight of an execution. Common countermeasure and best business practices that help ensure a solid security understanding are the objectives of the course. Three credits.

SW 596 Network Routing and Switching

The course presents concepts and develops skills needed in designing, implementing, and troubleshooting local and wide-area networks. Students design and configure LAN, WAN using routers/switches and learn the components of wireless networks, and how to configure and troubleshoot a network and optimize its performance. The course provides also numerous lab opportunities to configure and troubleshoot networks with Cisco routers and switches (Prerequisite: SW 404) Elective. Three credits.

SW 599 Information Security Measures and Countermeasures

This course covers current information security practices and countermeasures put in place to safeguard against security breaches. The course reviews Internet infrastructures such as firewalls, IDS systems, and honey pots. Additional areas include risk analysis, computer-use policies, physical security, Internet/intranet security, Malware, firewall infrastructure, and current information security issues. (Prerequisite: SW 404) Three credits.

ME 372 Application of Theory of Elasticity

This course covers theory of elasticity (stress, strain, and generalized Hooke's law), strain energy methods (Castigliano's theorem), thin shells of revolution (equilibrium equations, pressure vessels), thin plates (rectangular and circular plates, moment-curvature relations), beams of elastic foundations and buckling. (Prerequisite: ME 308) Three credits

SW 404 Network Concepts

This course covers the structure and technologies of computer networks architecture including cabling, wiring hubs, file servers, bridges, routers, and network interface cards. It discusses network software and hardware configurations protocol stacks and connecting a personal computer to a network. The course examines the OSI-model, TCP/IP protocol, and routing protocols. Students will be able to create a subnet of TCP/IP networks. Three credits.

School of Nursing

A Message from the Dean

On behalf of the faculty and staff; it is my pleasure to welcome you as a member of our School of Nursing community where excellence, innovation and creativity are ideas we put into practice daily. We are committed to preparing nursing leaders for today and tomorrow's health care needs.

Nursing is a profession dedicated to the advancement of health and health care through science and its application. At a time when nursing education and practice is transforming before our eyes - with the Affordable Care Act and Institute of Medicine report on the Future of Nursing providing a context and blueprint for action - we are determined to prepare nurses who will continue to shape health care in this evolving environment. Nurses will provide critical leadership and be among the architects of change, with greater emphasis on prevention and universal access to cost-effective, culturally competent, high quality care.

The Jesuit tradition of academic rigor and personal reflection guide nursing education at Fairfield. With a rich foundation in the Core, students apply their knowledge in ethics, communication, spirituality and culture to their increasing competence in learning to be a nurse. A global understanding of health care with a strong focus on issues of justice and equality prepare our graduates to be innovative leaders.

Our goal is to provide each student with an educational experience that is individualized and empowering. This is accomplished by effectively linking classroom and clinical experiences with expectations for competence, compassion and justice in health care within the context of the highest academic standards. Interdisciplinary collaboration within and outside the university, opportunities to care for patients in over 50 health care agencies, along with the opportunity for international study abroad allow students to build skills in collaboration, advocacy and leadership.

What truly distinguishes us is our unwavering commitment to our students and their careers. As you gain new knowledge and skills, you will experience the dedication our faculty members have to your development. I encourage you to get to know them - they are leaders not only of the School, but of the entire nursing profession. As leading educators and scholars, they contribute research and life-saving knowledge for the benefit of society.

The time you spend with us is sure to provide you with many opportunities. I invite you to take full advantage, establish your career in nursing and prepare for the challenges that await you. Learn, explore, and achieve! It's our goal to support you every step of the way.

Lynn Babington, PhD, RN

The goal of the undergraduate program is to prepare students for professional nursing practice. One of the unique features of all undergraduate programs at Fairfield is the strong liberal arts core that is integral to the curriculum. Through these courses, nursing students develop the social awareness, historical consciousness, thinking skills, aesthetic sensibility, values orientation, and foundations in art, literature, and science that are hallmarks of undergraduate education. The program of study contributes to the development of a well-rounded person who is able to live effectively and productively in the world of today and tomorrow. Students grow personally and professionally to become committed and compassionate nurses, capable of providing professional care to people in whatever setting they encounter.

The curriculum of the School of Nursing provides students with educational experiences from which they gain a strong base in the humanities, mathematics, social sciences, and natural sciences as well as in nursing theory and practice. Students are fully integrated into the University community and enroll in core courses with students of all majors.

Faculty members in the School of Nursing are exceptionally well qualified by academic and clinical preparation. The small student-to-faculty ratio is an inherent component of the program, particularly as it relates to clinical practice. Each student is assigned to a nursing faculty advisor who works closely with students to monitor progression through the program. Academic counseling, individualized attention, and career planning are integral to the advisement process.

In the program, students participate in nursing practice in a variety of clinical settings. The School has affiliations with more than 50 agencies, including small and large hospitals, community health centers, in-patient and out-patient psychiatric institutions, and schools. Opportunities are available in urban and suburban settings, for students to work with people of different cultures, backgrounds, and needs.

Fairfield nursing students gain public health experience through clinical rotations at the School of Nursing's Health Promotion Center in Bridgeport. The Center is nationally recognized for its community health outreach program, which provides care to the region's poor and underserved population. Students provide services through partnering agencies throughout the community, offering health screenings, education, and referral.

The School of Nursing facility houses multimedia classrooms, faculty offices, conference rooms, and a tiered lecture hall. The Robin Kanarek Learning Resource Center fills the second floor of the building. Recently updated, the Learning Resource Center has state of the art media and technology to provide flexibility in offering classes and clinical simulations. Equipped with demonstration stations and a full line of SimMan® patients, settings simulate obstetrics, neonatal ICU, pediatrics, medical surgical nursing, and home care. Three interconnected rooms provide a fully equipped ICU and operating room. This focus on simulation based learning gives students access to controlled clinical situations that develop students' patient-care, critical-thinking, and decision-making skills in a risk-free environment.

Upon successful completion of the program, students receive a B.S. degree in Nursing and qualify to take the NCLEX examination for licensure as a registered nurse. The School of Nursing programs are accredited by the Commission on Collegiate Nursing Education and approved by the Connecticut Department of Higher Education and the Connecticut State Board of Examiners for Nursing.

The School of Nursing Philosophy

The Philosophy of the School of Nursing flows from the Mission Statement of Fairfield University, and gives definition to the Jesuit ideals of social responsibility, truth, and justice. The faculty views nursing as the art and science of reflective practice in caring for vulnerable populations. Individuals are biological, psychological, social, and spiritual beings who are unique members of families and of larger social systems. Interaction and communication within these systems influence health and well-being. Health is a dynamic process of physical, mental, spiritual, and environmental harmony that enables people to affirm and pursue their own life goals. Optimum health begins with nurturing and promoting one's own emotional and spiritual growth, which then extends to respect and caring for others. Health and well-being are influenced by many variables including quality of life. When recovery from illness is not possible, death itself is viewed as the final opportunity for growth.

Students are viewed as holistic individuals who are seeking to develop multifaceted roles and who are accountable for their learning. Each student brings unique qualities that contribute to the strength and diversity of the program. Along with planned educational experiences, faculty offer support, guidance and mentoring throughout the learning process. Students are encouraged to develop their individual strengths and identify areas of interest as they progress throughout the curriculum. Students emerge as qualified baccalaureate-prepared entry-level practitioners or master's/doctorally prepared advanced-level practitioners, who integrate theory and research into their practices and use a critical approach to problem solving. Because society is rich with diverse religious, ethnic, and cultural groups, nurses are professionals who must be prepared to work with those whose beliefs and values may be different from their own. In order to be sensitive to others, it is first necessary to know and accept one's own values and beliefs. Students and faculty demonstrate mutual respect for the rights of others and appreciation of these differences.

The School of Nursing Mission & Purpose

In keeping with the mission of Fairfield University to develop men and women for others, the School of Nursing builds on a tradition of innovation and a commitment to provide the very best nursing education, scholarship, and professional service locally, nationally, and internationally. The School of Nursing is committed to leadership in nursing. The discovery, transmission, and use of knowledge are at the core of our work. Knowledge of health and illness in individuals, families, groups, and communities, both locally and internationally, provides the context for our charge. The ultimate test of our vision will be the results of contributions of faculty and graduates over time.

Guiding Principles for the Nursing Programs

Ethics and Social Responsibility

Commitment to social responsibility, truth, and justice is inherent in the Jesuit ideal and underscores the need to provide care to vulnerable populations; that is, those populations that experience actual or potential threats to health or well-being. Provision of care to vulnerable populations is a particular concern to nursing. Nurses have a moral and ethical obligation to provide and advocate for optimal health care for all members of society regardless of differences in culture, race, gender, socioeconomic status, religion, or age. Nurses consider the interplay of health and social issues as they care for clients in various stages of health and illness. Students confront the range of ethical dilemmas and value conflicts inherent in care delivery, and develop an understanding and acceptance of self and others.

Holism

Human beings are unique individuals who grow in complexity throughout life. Holism is an approach to assessment and management of patient-centered care that considers the biological, psychological, sociocultural, and spiritual needs of patients, and searches for the deeper and more complex roots of ill health beyond the individual. Interactions among and between people and the environments in which they live are considered in planning and providing quality nursing care. The holistic approach supports and relies upon the therapeutic nurse-patient relationship and a focus on wholeness, harmony and healing.

Reflective Practice

Nurses diagnose human responses to actual and potential health problems, identify individual strengths and nursing care needs, and plan and deliver culturally sensitive care that promotes, maintains, or restores health. Nursing practice integrates scientific problem solving with holistic caring. Reflective practice emphasizes a combination of rational and intuitive processes that allow students to discover the links between theory and practice, help them to develop their skills in creating holistic, individualized, and flexible plans of care, and enhance their acceptance of professional responsibility. It incorporates approaches such as reflection-on-action, reflection-in-action, and reflection-before-action. Reflective practice leads to greater awareness of individual beliefs, biases, and existing knowledge base, development of creative and critical thinking processes, changes in perspectives, attitudes, and behaviors, and enhanced personal and professional identity development. The establishment of a pattern of reflective practice encourages lifelong learning and ultimately advances the discipline of nursing through greater knowledge production and opportunities for leadership.

Professionalism

Characteristics of professional nursing practice include critical thinking, clinical reasoning, decision-making, and accountability. Behaviors integral to professional nursing's role are advocacy, political activism, effective communication, collegiality, commitment to life-long learning, scholarship, and the upholding of standards as defined by the profession. Nurses function as integral members of interprofessional teams and collaborate with other health care providers, patients, family and community members. Their role involves responsibilities for teaching, making referrals, and strategizing to shape health policy at local, state, national, and international levels. The purpose of this collaborative, interprofessional activity is to improve care and address quality and safety issues through education, consultation, and management. Professional nursing practice combines holistic care with evidence-based practice. Nursing research is viewed as the investigation of issues of concern in nursing practice with the aim of answering complex questions and developing knowledge to improve care and potentiate health. Leadership and management skills are essential to shape the future of health care, and help others attain goals and facilitate change. Participation in professional organizations and groups, role modeling, client advocacy, political activism, and fostering a learning environment by mentoring and precepting others is expected.

Baccalaureate Program Outcomes

- Demonstrate effectiveness in planning and providing holistic evidence-based nursing care for diverse individuals and populations.
 - Create an environment for the provision of care within clinical microsystems with attention to quality, safety, information systems and health care ethics.
 - Use clinical reasoning, critical thinking, and ethical decision-making based on nursing science, related theory, and current evidence, to inform the delivery of care across the lifespan.
 - Participate in inter- and intra-professional communication and collaboration in partnership with individuals and populations to deliver evidence-based, patient-centered care.
 - Translate knowledge from research, benchmarking, quality improvement and other relevant sources into practice to address health related problems.
 - Synthesize knowledge from the humanities and sciences in planning and providing care that is guided by the values of altruism, autonomy, human dignity, integrity, global citizenship, and social justice.
 - Demonstrate professional growth, through the cultivation of self-awareness, responsibility, accountability, creativity, leadership and commitment to lifelong learning.
 - Advocate for patients, consumers, and the nursing profession through involvement in the political process, and health/patient care policies and practices.
-

School of Nursing Curriculum

The four components of the School of Nursing undergraduate program are:

The Core curriculum

Nursing students must complete the core curriculum that is required of all Fairfield undergraduates, except that nursing students may meet either the visual and performing arts or the language requirement. Students meet the U.S. diversity requirement through enrollment in the NS 112 Healthcare Delivery Systems. Students meet the World diversity requirement through enrollment in a course focusing on non-western culture or society, exclusive of Europe and the United States (may be met through existing core courses). Statistics is required for all nursing students; the minimum requirement is MA 17 Introduction to Probability and Statistics.

Natural and social sciences

Students take one semester of chemistry and three semesters of biology that include anatomy and physiology, and microbiology. Because the social sciences form an important part of the foundation for nursing practice, students also take developmental psychology and a social science elective.

Nursing courses

Classroom instruction in nursing theory begins in the freshman year and continues throughout the undergraduate program. Instruction in nursing skills begins in the sophomore year. Nursing courses include theoretical and clinical components. With each semester, clinical hours increase. To insure that students obtain the breadth and depth of clinical experience needed, the school has associations with many clinical facilities, including private hospitals, veterans' hospitals, clinics, outpatient departments, rehabilitation centers, public health departments, long-term care facilities, home care agencies, community health centers, schools, and its own Health Promotion Center in Bridgeport. Students provide their own transportation to clinical agencies, and all costs associated with clinical placements including travel, parking, background checks, and health and professional requirements, are the responsibility of the student.

Electives

Two electives in the curriculum provide students with an opportunity to explore topics of interest including the liberal arts, nursing, and minor options.

University Honors Program

The School of Nursing participates in the University Honors Program, an interdisciplinary course of study (23 credits) open to invited freshmen and sophomores and devoted to intellectual history, interdisciplinary studies, and advanced work in the student's major field. A detailed description of the Program can be found in the Honors Program section on page 163.

Standards for Admission and Progression at Fairfield University School of Nursing

At Fairfield University School of Nursing, students are required to successfully complete clinical practica involving direct patient care. By accepting admission in the School of Nursing, the student understands the program eligibility and progression requirements.

Disability Statement

Consistent with its mission and philosophy, Fairfield University School of Nursing does not discriminate on the basis of disability. In accordance with the Americans with Disabilities Act of 1990 and Section 504 of the Rehabilitation Act, the University will assist students in making reasonable accommodations that allow an otherwise qualified student with a disability to meet essential eligibility requirements in order to participate in its programs. Candidates for the nursing program must be able to meet minimum standards for clinical practice, with or without reasonable accommodations. To receive accommodations on the basis of disability, the student must self-identify, provide documentation for the disability, and request accommodation from the Office of Disability Support Services. The decision regarding appropriate accommodations will be based on the specifics of each case. Accommodations must specifically address the functional limitations of the disability. An accommodation will not be made in those situations where the accommodation itself would fundamentally alter the nature of the program, cause hardship to the school, or jeopardize the health or safety of others. For further information, refer to the Fairfield University Office of Academic & Disability Support Services http://www.fairfield.edu/adss_index.html.

Eligibility Requirements

The curricula leading to degrees in nursing from Fairfield University requires students to possess essential non-academic skills and functions required to engage in clinical practice. It is within the sole determination of Fairfield University and the School of Nursing to assess and determine whether a student meets these skills and functions. Eligibility requirements for participation and completion in the nursing program shall include, but are not limited to, the following six capabilities:

Critical Thinking

Critical thinking ability sufficient for clinical judgment; student must be able to examine, interpret, analyze, and synthesize material for problem solving and evaluation of patient situations and own performance.

- Ability to assess, plan, establish priorities, implement and evaluate patient outcomes.
- Ability to calculate appropriate dosages for specific medications.
- Ability to use good judgment in establishing priorities and making appropriate decisions in client care.

Interpersonal & Communication

Relationship & communication abilities appropriate for interacting sensitively with individuals, families, and groups from a variety of social, cultural, and intellectual backgrounds. Ability to accurately and clearly communicate appropriate information regarding patient status and response to care, both orally and in writing.

- Interpersonal skills to communicate effectively with patients/families and members of the healthcare team.
- Ability to gather and record patient data concerning history, health status and response to care.
- Ability to give and follow verbal and written reports and directions to patients, families, and members of the health care team.

Sensory Abilities

Ability to observe, identify, and obtain information in order to assess, plan, provide and evaluate nursing interventions; student must possess adequate sensory abilities or be able to demonstrate appropriate and safe compensation for deficits.

- Visual acuity necessary to observe physical changes in health status, prepare and administer medications, and gather reference material and patient data from written and digital sources.
- Auditory ability to differentiate normal and abnormal heart, lung, & bowel sounds.
- Tactile ability to differentiate temperature and anomalies of the skin, as well as unsafe patient care devices.
- Cognitive ability sufficient to read and understand directions, assignments, and patient documents.

Motor Skills and Mobility

Sufficient mobility, including the gross and fine motors skills needed to provide safe and competent nursing care, both routine and emergency.

- Sufficient motor skills necessary to perform physical care such as ambulating, positioning, and assisting with activities of daily living as needed.
- Fine motor skills needed for basic assessment such as palpation, auscultation, and percussion.
- Mobility sufficient to carry out patient care procedures such as suctioning, positioning, and drawing up medication into a syringe.

Emotional Stability

Emotional stability for providing care safely to patients and their families within a rapidly changing and often stressful healthcare environment; the ability to monitor and identify one's own and others' emotions, and use the information to guide thinking and actions.

- Integrity needed to make ethical decisions and honor the professional code of nursing.
- Emotional ability to maintain calm in a crisis and emergency situation.
- Ability to develop mature relationships with the health care team and modify behavior in response to constructive feedback.

Physical Health and Abilities

Physical health and stamina sufficient to provide care to diverse patient populations.

- Sufficient energy and ability to manage a typical patient assignment in a variety of settings for a full seven hour clinical day.
- Physical health necessary to care for those who are immuno-compromised, incapacitated, and/or otherwise vulnerable.

Progression in the Nursing Curriculum

Nursing students must follow all University educational policies and general regulations including those regarding academic progress.

Prerequisites

The science and psychology courses are sequential and are prerequisites to designated nursing courses. Strong foundational knowledge in the science and psychology courses is critical to success in the nursing program. Thus, students may not progress to the next semester with an incomplete in a prerequisite course. BI 107 Human Anatomy and Physiology I, BI 108 Human Anatomy and Physiology II, BI 151 Microbiology, CH 84 Chemistry, and PY 111 Developmental Psychology must be completed successfully with a minimum grade of C (73) for students to progress to the next semester in the course sequence for the nursing major. The final grade for CH 84, Chemistry is calculated based on grades for both the lab and theory portion.

Students unable to complete these courses successfully are expected to repeat coursework in the next semester or the summer session immediately following or they will be dismissed from the School of Nursing. Students consistently achieving minimum passing grades in prerequisite courses will

be placed on Academic Warning. Students who do not obtain a grade of C or better in a prerequisite course (including a repeated course) may repeat the course once. A grade of less than C in three or more prerequisite courses will result in dismissal from the School of Nursing.

Nursing Courses

Nursing courses are sequential, beginning with foundational courses and progressing to increasing levels of complexity and challenge throughout the program. As students move through the curriculum, new content is integrated and builds upon previously learned material. Thus, all students must earn the minimum grade of C+ (77) in all nursing courses to progress to the next semester and continue in the program.

Further, students may not progress to the next semester with an incomplete in any nursing course. Students who do not obtain a grade of C+ or better in a nursing course may repeat the course once. A grade of less than C+ in two nursing courses (including a repeated course) will result in dismissal from the School of Nursing. The clinical component of all clinical nursing courses is graded on a pass/fail basis. Students must pass the theory and clinical component of a course to pass the entire course, regardless of their grade in the theory component. Students who fail to earn the minimum grade in either component of a clinical course must repeat the entire course.

Health and Professional Requirements

All clinical agencies require documentation of various professional and health information for nursing students. Nursing majors must be certified in cardiopulmonary resuscitation by Jan. 1 of the sophomore year and remain certified throughout the nursing program. Students must receive their certification through either the Health Care Provider course offered through the American Heart Association or the Professional Rescuer or CPR/AED for Lifeguard Certification course offered through the American Red Cross. All health requirements and OSHA training requirements must be met each year prior to clinical practica.

To attend clinical, students must have a physical examination and non-reactive Mantoux test yearly. Proof of immunization or immunity must be provided for the following: hepatitis, varicella, measles, mumps, rubella, flu, and diphtheria-tetanus. History of disease is not acceptable as proof of immunity; laboratory results of blood titers must be provided.

Student Background Checks and Drug Testing

In accordance with hospital and agency contracts, students will be expected to obtain a background check prior to their first clinical experience. CertifiedBackground.com is the immunization tracking system used by Fairfield University nursing students to house their health information. Students are responsible for uploading information and keeping all required information updated throughout their clinical experience. Some agencies require drug testing. Students unable to comply with agency requirements will be dismissed from the program. All costs associated with agency requirements are the responsibility of the student.

Continuous Assessment

All nursing students participate in a comprehensive nationally standardized assessment program. This total testing program allows close monitoring of student progress and serves as the basis for individualized advisement. A testing fee will be included for all nursing students in appropriate semesters. All students must meet the national average on the final assessment test before transcripts are released.

Licensure

All nursing students graduate with a bachelor of science degree in nursing. To obtain initial licensure as a Registered Nurse, students apply to the State Board of Nursing in the state in which they plan to practice. In addition, students register to take the National Council Licensure Examination (NCLEX) at a conveniently located testing center.

All students are expected to pass the licensure exam on the first try. Application procedures vary by state. Information may be obtained on the National Council of State Boards of Nursing website: <http://www.ncsbn.org>.

Graduation from the nursing major does not ensure eligibility for state licensure. A candidate who has been convicted of a felony or another crime in any state may be required to submit documentation about this conviction to the State Board of Nursing in which licensure is sought. Each State Board of Nursing reserves the right to make a decision on whether to grant licensure to practice as a registered nurse.

Scholastic Honors

Sigma Theta Tau, International Honor Society

The Mu Chi Chapter of the Sigma Theta Tau International Honor Society of Nursing was established at Fairfield University in 1992. Since then, the Chapter has grown to nearly 1000 members. The Society is committed to fostering nursing leadership, research and creativity. Standards for membership include demonstrated excellence in scholarship and/or exceptional achievement in nursing.

Bachelor of Science - Major In Nursing

Curriculum Plan for Full-Time Undergraduate Students

First Year - Fall Semester Credits

PH 101/CH 84	Philosophy or Chemistry	3/4
EN 11	Texts and Contexts I	3
Lang/VPA	Language or Visual and Performing Arts*	3
MA 19/119	Introduction to Calculus	3
BI 107	Human Anatomy and Physiology	4
Total		16/17

First Year - Spring Semester Credits

NS 110	Introduction to Professional Nursing	
NS 112	or Healthcare Delivery Systems	3
EN 12	Texts and Contexts II	3
Lang/VPA	Language or Visual and Performing Art*	4/3
CH 84/PH 101	Chemistry or Philosophy	4
BI 108	Human Anatomy & Physiology	4
Total		17/16

Sophomore Year - Fall Semester Credits

NS 112/	Healthcare Delivery Systems/ or	
NS 110	Introduction to Professional Nursing	3
NS 303	Basic Concepts of Pathophysiology and Pharmacology	3
PY 111/	Developmental Psychology/ or	
BI 151	Elements of Microbiology	3/4
MA 17	Intro to Probability and Statistics/ or	4
HI 10	Origins of the Modern World	3
RS 101	Exploring Religion	3
Total		15/16

Sophomore Year - Spring Semester Credits

NS 270	Health Assessment	4
NS 272	Geriatric Nursing/ or	
NS 305	Mental Health Nursing	4
BI 151	Elements of Microbiology or	
PY 111	Developmental Psychology	4/3
MA 17	Intro to Probability and Statistics/or	
HI 10	Origins of the Modern World	3
Total		15/14

Junior Year - Fall Semester Credits

NS 301	Wellness to Illness	4
NS 305	Mental Health Nursing/ or	
NS 272	or Geriatric Nursing	4
NS 307	Therapeutic Nursing Interventions	3
HI/EN	History or English Elective***	3
PH/RS	Philosophy or Religious Studies Elective	3
Total		17

Junior Year - Spring Semester Credits

NS 310	Research in Nursing	3
NS 312	Patterns of Illness I	5
NS 314	Nursing of Women and Childbearing Family/ or	
NS 323	Nursing of Children and Family	4
	Ethics	Elective
Total		15

Senior Year - Fall Semester Credits

NS 323	Nursing of Children and Family/ or	
NS 314	Nursing of Women and the Childbearing Family	4

Nursing Study Abroad

The School of Nursing offers study abroad opportunities for short-term and semester study at Fairfield University affiliated programs.

Nursing Semester Study Abroad

Options include:

The National University of Ireland, Galway and Australian Catholic University at Brisbane

The Nursing Semester Study Abroad Program is open to Fairfield University nursing students who have successfully completed the spring semester of the sophomore year, have an overall GPA of at least 3.0, and are recommended by their faculty advisor and dean. Students must also have a GPA of 3.0 or better in the sciences, with no repeated core science courses. In addition, students must have a minimum average grade of B- (80) in all nursing courses at the midpoint of the fall semester of junior year. Normally, a maximum of 12 students will be permitted to study abroad in any semester.

Full-time undergraduate students enroll in liberal arts, healthcare and professional nursing courses in an international setting in the spring of the junior year. While abroad, students will be required to complete selected ATI subject area tests.

National University of Ireland, Galway

The Galway semester runs from January-May. Upon return, students complete a medication and skills review, enroll in a 6-week medical-surgical summer course on campus from mid-May to mid-July, and continue in the traditional nursing progression with some minor curriculum adjustments. Students are responsible for the cost of the course and housing for the summer.

Australian Catholic University at Brisbane

Students who select the ACU Brisbane option have a semester running from February-June. Medical-surgical theory and clinical will be part of the required curriculum in Brisbane. In addition, students complete an on-line module and a competency test, and continue in the traditional nursing progression with some minor curricular adjustments.

Managua, Nicaragua

A Nursing study abroad program is offered during spring break for full time undergraduates, second degree, and RN-BSN nursing students enrolled in NS 330, Public Health Nursing. Students collaborate with social work students from Universidad de Centroamerica (UCA) and community leaders to address health problems. This experience fulfills the required public health clinical hours for NS 330. Students need to commit to group meetings prior to and following Spring break.

Non-Nursing options

The University offers many intercession and summer programs that offer exceptional learning opportunities beyond the classroom. An overall GPA of 2.8 is required to study abroad in short-term and summer programs. Students can choose to study in a variety of countries in South or Central America, Europe, the United Kingdom, Middle East, Asia, Africa or Australia.

Program Options For Adult Learners

The programs for adult learners are designed to draw on previous education and experience and allow students to earn the bachelor's degree by different routes. A program of study for individuals who hold an associate degree in nursing allows students to pursue a B.S. in nursing. Another option for adult learners is an accelerated format for persons holding a bachelor's degree in another field.

Admission

Students interested in pursuing a bachelor's degree in nursing in the RN to B.S. program may attend on a part-time basis. Classes are available during the academic year and in the summer. Registered nurses must have successfully completed an associate degree or diploma program and possess a RN license. Students interested in the Second Degree program, a 15-month full time accelerated program, must hold a bachelor's degree in any field. Core and prerequisite courses must be completed prior to the start of the program.

Admission is competitive and all students must have a minimum GPA of 3.0 to declare a nursing major. Students must complete an application to begin nursing courses.

Matriculation

Matriculation is official enrollment in a degree program. Students in the RN to B.S. in Nursing Program are matriculated after successful completion of NS 250, Professional Nursing or NS 252, Health Assessment for RNs.

Core Requirements

Adult learners must meet the University's core course requirement. Course requirements in the liberal arts and required supportive courses can be met by challenge examinations, transfer credits from other academic institutions, or enrollment in specific courses. Courses are accepted in transfer from other accredited colleges and universities on the basis of a satisfactory (C or better) academic record and course equivalency.

Prerequisite Course Requirements

The School of Nursing suggests that all prerequisite courses be completed within 10 years prior to the first nursing course. Applicants normally have completed science courses with grades of A or B in the last three to five years. Acceptance of credit is at the discretion of the Program Director/ Dean. Students are expected to review course material to ensure that their knowledge of the subject matter is current. Students can maximize their potential for success in the nursing program with a strong foundation that is provided by these courses.

Residency Requirement

A minimum of 60 credits, including credits in nursing, must be completed at Fairfield University. In addition, the last 30 credits for the degree must be taken at Fairfield University.

Partnership Programs

Fairfield University School of Nursing has a partnership with the Connecticut Community College Nursing Program, Bridgeport Hospital and St. Vincent's College. This program provides a seamless transition from associate to bachelor's degree in nursing and grants 34 credits in Advanced Placement nursing.

Credit from International Programs

Students completing coursework outside the United States must submit certified English transcripts and course-by-course evaluation of all academic records. Information may be obtained from World Education Services (800-937-3895 or e-mail info@wes.org).

Diversity Requirements

RN to BSN students meet the U.S. diversity requirement through enrollment in NS 250, Professional Nursing. Students meet the World diversity course requirement through enrollment in a course focusing on non-western culture or society, exclusive of Europe and the United States (may be met through existing core courses).

Bachelor of Science - Second Degree Program

Second Degree Core Courses

Humanities: five courses distributed as follows:

- English (six credits)
- Philosophy (three credits)
- Ethics (three credits)
- Religious Studies (three credits)

Prerequisites: six courses

- Statistics (three credits)
- Developmental Psychology (three credits)
- Anatomy and Physiology I & II (eight credits)
- Microbiology (four credits)
- Chemistry (four credits)

Selected prerequisite requirements may be met through challenge exams or transfer of credit from approved academic institutions.

General Electives: 11 courses (33 credits)

	Summer 1	Credits
NS 110	Introduction to Professional Nursing	3
NS 112	Healthcare Delivery Systems	3
NS 270	Health Assessment	4
NS 272	Geriatric Nursing	4
NS 307	Therapeutic Nursing Interventions	3
Total		17

	Fall 1	Credits
NS 301	Wellness to Illness	4
NS 303	Basic Concepts of Pathophysiology and Pharmacology	3
NS 305	Mental Health Nursing	4
NS 312	Patterns of Illness I	5
Total		16

	Spring 1	Credits
NS 310	Research in Nursing	3
NS 314	Nursing of Women and the Childbearing Family	4
NS 323	Nursing of Children and Family	4
NS 325	Patterns of Illness II	5
Total		16

	Summer 2	Credits
NS 321	Professional Nursing: Leadership and Management	3
NS 330	Public Health Nursing	4
NS 332	Transition: Professional Nursing Practice	4
Total		11

Bachelor of Science - RN to BS In Nursing Program

RN to BS Core Courses

Humanities: 12 courses distributed as follows:

- English (EN 11 and EN 12, totaling six credits)
- History of Western civilization (three credits)
- History elective (three credits)
- Visual and performing arts (two courses totaling six credits) or two modern language courses at the intermediate level (totaling six credits)
- Philosophy (three credits)
- Ethics (three credits)
- Religious Studies (three credits)
- Three elective courses chosen from humanities, communication, or any of the above disciplines (nine credits)

General Electives: four courses (12 credits)

Social Science: two courses (six credits):

- Anthropology, Sociology, Psychology, Political Science, or Economics

Math and Science: four courses distributed as follows:

- Science (3-4 credits)
- Science or math (2 courses totaling 6-8 credits)
- Statistics (3 credits)

Diversity Requirements

Students meet the U.S. diversity with NS 250 and World diversity requirements through enrollment in designated courses (see diversity requirements in catalog).

Nursing Courses for RN to BS Students

Credits

NS 330	Public Health Nursing	4
NS 356	Transition: Professional Nursing	3
NS EL	Nursing Elective (with advisor approval)	3

Advanced Placement By Articulation or Partnership 30-34 credits

Course Descriptions

NS 110 Introduction to Professional Nursing

This course serves as a foundation to the development of the nurse as a professional person. Central to this is the awareness and acceptance of self. The course introduces the process of critical thinking/judgment as an approach to the planning and delivery of nursing care to individuals, families, groups, and communities. Discussion of nursing's history and accomplishments serves as the cornerstone for the advancement of professional behaviors including scholarship, communication, collaboration, personal responsibility/ accountability, integration of research and practice, and peer and self-evaluation. (Pre- or co-requisite: BI 107) Three credits (42 theory hours).

NS 112 Healthcare Delivery Systems

This course explores the healthcare delivery system in the United States through issues relating to conceptual, historical, economic, political, and technological developments. The course emphasizes ethical and legal aspects of the current system that remain unresolved, such as access to care, type of services to provide, and roles within the system and discusses consumer use of traditional, alternative, and experimental therapies. This course gives an interdisciplinary perspective to students interested in healthcare from any field of study. This course meets the U.S. diversity requirement. (Prerequisite: BI 107) Three credits (42 theory hours).

NS 250 Professional Nursing

This course orients the registered nurse to baccalaureate nursing education to facilitate re-entry into a new educational system. The course articulates the scope and aims of professional nursing practice in the study of concepts and issues of multiple aspects of healthcare delivery and education. Students examine the School of Nursing philosophy and conceptual framework. (Prerequisites: Connecticut RN license or academic transcript and approval of advisor) Three credits (42 theory hours).

NS 252 Health Assessment for Registered Nurses

This course provides the registered nurse with knowledge and skills of health assessment of clients throughout the life span, with consideration of cultural and ethnic variations. Critical thinking and communication are essential components of health assessment and are incorporated in this course. This is a Web-enhanced course that also uses lecture, discussion, demonstration, supervised and individual practice, and opportunities to develop self-evaluation skills. Students organize and prioritize data, and record assessment data on designated forms. (Prerequisites: BI 107; BI 108) Three credits (28 theory, 28 lab hours).

NS 270 Health Assessment

This course introduces students to the knowledge and skills of client health assessment throughout the life span, with consideration of cultural, BI 108 and ethnic variations. Critical thinking and communication are essential components of health assessment. The course uses lecture, discussion, demonstration, supervised and individual practice to help students expand their skills in interviewing, taking a health history, and completing a physical examination. Students organize and prioritize data using functional health patterns and record assessment data on designated forms. This course also includes a separate one-credit laboratory module designed to complement physical assessment skills. Students use the School of Nursing Learning Resource Center to develop skills pertaining to infection control, body mechanics, and client hygiene. (Prerequisites: BI 107; BI 108; CH 84; NS 110; NS 112; NS 303. Pre- or co-requisites: BI 151, PY 111) Four credits (28 theory, 56 lab hours).

NS 272 Geriatric Nursing

This course focuses on nursing care of older adults living in a long-term care setting. Normal physiological changes of aging and related assessment skills are incorporated and evaluated. Management of common geriatric care problems is emphasized. Instruction in Medicare/Medicaid, insurance reimbursement systems, political focus of older adult care, the minimum data set framework, and policies and procedures as they relate to long term care are offered. (Prerequisites: BI 107, BI 108, CH 84 or CH 11, NS 110, NS 112; Pre- or co-requisites: BI 151, NS 270, PY 111) Four credits (42 theory hours, 42 clinical hours).

NS 301 Wellness to Illness

This course explores factors that influence the degree of health and wellness experienced by individuals across the life span. Epidemiology provides a framework for the assessment of risk and the management of common health problems. Students have opportunities to promote wellness through clinical experiences with healthy children and adults. The course examines how people make health-related decisions, what risks threaten their health, and reasons they give for adopting particular lifestyles, and addresses spirituality and culture, with particular attention devoted to assessment techniques and intervention strategies. Students learn traditional and (alternative) complementary therapeutic techniques to enhance health. (Pre- or co-requisite: NS 270, NS 307) Four credits (42 theory, 42 clinical hours).

NS 303 Basic Concepts of Pathophysiology and Pharmacology

This course focuses on the study of physiological and biological life processes with an emphasis on deviations from normal and a particular emphasis on exemplar cases. The course discusses manifestations of disease and alterations in all body systems including pharmacological kinetics and dynamics as therapeutic strategies for treating alterations in normal life processes. (Prerequisite: CH 84, BI 107, BI 108, ; Pre- or co-requisite: NS 110, NS 112) Three credits (42 theory hours).

NS 305 Mental Health Nursing

This course focuses on the nursing care of individuals with psychiatric disorders. The course uses theories of human behavior and personality as well as biophysical and holistic models as foundations to plan and implement care in a variety of traditional and non-traditional treatment settings. It discusses factors that may contribute to an individual developing a psychiatric disorder and considers ethical, legal, and cultural issues. The course emphasizes development of a therapeutic nurse-patient relationship and use of communication techniques to assist patients toward mental health. (Prerequisites: BI 107, BI 108, CH 84, NS 110, NS 112, NS 303; Pre- or co-requisites: BI 151, NS 270, PY 163) Four credits (42 theory, 42 clinical hours).

NS 307 Therapeutic Nursing Interventions

This course focuses on the provision of safe and effective care for the basic needs of clients of all ages using common nursing technical skills and considering cultural and ethnic variations. The course introduces psychomotor skills and various nursing interventions that help clients maintain physical well-being including wound care; administration of oral, parenteral, and intravenous medications; glucose monitoring; nasogastric and respiratory care; and measures to assist with urinary and bowel elimination. The School of Nursing Learning Resource Center provides opportunities to use critical thinking in skill practice, interactive learning, supervised return demonstration, and hypothetical clinical situations. (Prerequisites: CH 84, BI 107, BI 108, MA 19 or higher; Pre- or co-requisites: NS 110, NS 112, NS 303) Three credits (14 theory, 56 lab hours).

NS 310 Research in Nursing

This course introduces the research process and its application to scholarship in clinical practice. Students learn to be consumers of research through a review of the literature, critique of research, and identification of methods appropriate to study specific practice-related problems. The course emphasizes critical thinking and writing skills and considers ethical, economic, technological, and statistical dimensions. The course applies concepts to clinical research, evidence-based practice, and quality improvement. (Prerequisites: NS 110 or NS 250, and MA 17 or MA 217) Three credits (42 theory hours).

NS 312 Patterns of Illness I

This course introduces students to illnesses that are most frequently occurring in the adult population. Discussion of these illnesses includes application of the components of the nursing process: assessment, diagnoses, interventions, and evaluation of expected outcomes. The course discusses specific independent and collaborative therapeutic interventions including indications for their use and evaluation of effectiveness. Extensive use of case examples enhances learning. Students achieve competence in the performance of selected skills during this course, which includes a clinical practicum with an acutely ill adult population. (Prerequisites: NS 272, NS 301, NS 303, NS 305, NS 307) Five credits (42 theory, 84 clinical hours).

NS 314 Nursing of Women and the Childbearing Family

This course provides students with the opportunity to master the knowledge and skills necessary to help families cope with changes in their reproductive needs, reproductive health issues, and gynecological challenges. Reproductive needs include the childbearing cycle: pregnancy; childbirth; postpartum care; care of the healthy newborn; and prenatal, intrapartal, and postpartal complications. Reproductive health issues include: infertility, family planning, menarche, and menopause. Gynecological challenges include breast and reproductive tract surgery. The course integrates ethical and legal aspects of reproductive issues throughout and discusses nursing theories and research findings generally related to reproductive health. (Prerequisites: NS 301, NS 303, NS 305, NS 307) Four credits (42 theory, 42 clinical hours).

NS 321 Professional Nursing: Leadership and Management

This course immerses students in issues and concepts central to professional nursing. It examines political, social, and legal systems that affect the image of nursing and influence its role definition. Students consider organizational dynamics and theories of leadership and management, with case studies and concurrent clinical practice providing the foundation for theory integration. Experiential projects that involve acute care and community-based practice settings facilitate critical reflection and creative planning. (Pre- or co-requisites: NS 310, NS 325 or NS 250) Three credits (28 theory, 42 clinical hours).

NS 323 Nursing of Children and Family

This course focuses on the nursing care of children, adolescents, and families dealing with health and developmental challenges of childhood and explores health promotion needs of childrearing families. Clinical resources reflect the trend toward community-based care, with student experiences in community agencies as well as in acute-care settings. The course employs a developmental perspective through which major causes of morbidity and mortality are examined. Case studies serve as vehicles for the integration of multicultural and multidisciplinary perspectives that introduce health problems. The course challenges students to develop critical and creative reasoning skills in working through the cases, guiding them in the use of developmentally and empathically appropriate communication strategies. (Prerequisites: NS 301, NS 303, NS 305, NS 307) Four credits (42 theory, 42 clinical hours).

NS 325 Patterns of Illness II

This course integrates knowledge learned in NS 312 and introduces other patterns of illness. Discussion involves the components of the nursing process: assessment, diagnoses, interventions, and evaluation of outcomes of patients throughout the adult lifespan. The course discusses specific independent and collaborative therapeutic interventions, including indications for their use and evaluation of their effectiveness. The course, which includes a clinical practicum working with high acuity patients across the adult lifespan, frequently uses case studies as a teaching strategy. (Prerequisites: NS 310, NS 312) Five credits (42 theory, 84 clinical hours).

NS 330 Public Health Nursing

This course focuses on the provision of safe and effective care to people living in communities. Students synthesize prior learning with public health theory and public health nursing core functions. Using an ecological model, students address population level concerns such as emergency preparedness (bioterror, disease outbreaks, and natural disasters), disease surveillance, and health promotion/disease prevention services. (Prerequisites: NS 310, NS 325 or NS 252) Four credits (42 theory, 42 clinical hours).

NS 332 Transition: Professional Nursing Practice

This capstone course addresses health promotion, maintenance, and restoration with clients in a variety of healthcare settings. Students are placed in selected healthcare settings in which they can practice under the supervision of a staff nurse preceptor. The course focuses on moving students toward autonomous professional nursing practice within their clinical setting. Functional health patterns provide the framework for giving care. The course explores nursing theories for their relevance and utility to nursing practice, and students apply leadership principles in coordinating care for groups of clients. The course emphasizes decision-making, collaboration, autonomy, and outcome evaluation and includes weekly conferences to discuss professional, clinical, and health policy issues. (Prerequisite: NS 325; pre- or co-requisites: NS 321, NS 330) Four credits (168 clinical hours).

NS 356 Transition Seminar: Professional Nursing Practice for RNs

This course for registered nurses challenges students to facilitate change in a clinical setting for the purpose of positively influencing patient care in health promotion, health maintenance, and/or health restoration. Through clinical experiences and the implementation of an individually-designed project, students further develop their critical thinking and communication skills, demonstrate the application of research, leadership, management, education and therapeutic nursing principles, and make the transition to a more autonomous, professional level of practice. (Prerequisites: Connecticut RN license, NS 310; pre-or co-requisite: NS 321, NS 330) Three credits (21 seminar, 63 clinical hours).

NS 360 Critical Care Nursing

This course introduces critical care nursing, focusing on nursing diagnosis and management of patients with cardiovascular, pulmonary, gastrointestinal, renal, neurological, and multisystem alterations. The course covers frequently used medications and basic EKG interpretation. (Prerequisite: NS 325) Three credits (42 theory hours).

NS 399 Nursing Independent Study

Through individually designed projects or activities, students work with a faculty member to study a specific area in depth. (Prerequisite: permission of the instructor and dean). One to six credits.
